Subject: Phase I Environmental Site Assessment, Colton Super Block, Approximately 353 Acre Site Roughly Bounded by San Bernardino Avenue, Riverside Avenue, I-10 Freeway, and Hermosa Avenue, City of Colton and City of Rialto, County of San Bernardino, California

Dear Ms. Ferguson:

The Environmental Division of Petra Geotechnical, Inc. (Petra) is pleased to present this Phase I Environmental Site Assessment for the above-referenced site. This investigation has been conducted in accordance with our Proposal No. 1088-08, dated February 27, 2008, and in conformance with the scope and limitations of the standards set forth in the American Society for Testing and Materials (ASTM) Practice E 1527-05 and the EPA's All Appropriate Inquiry (AAI) regulations 40 CFR Part 312. This assessment has revealed potential recognized environmental conditions in connection with the subject site.

This opportunity to be of service to you is sincerely appreciated. Please do not hesitate to call this office if you have questions pertaining to this report.

Respectfully submitted,

Petra Geotechnical, Inc.

EXECUTIVE SUMMARY

PHASE I ENVIRONMENTAL SITE ASSESSMENT

Colton Super Block,
Approximately 353 Acre Site Roughly Bounded by San Bernardino Avenue, Riverside Avenue, I-10 Freeway, and Hermosa Avenue,
City of Colton and City of Rialto, County of San Bernardino, California

INTRODUCTION

The information presented in this report includes the results of our recent site reconnaissance, a review of pertinent literature, and recent federal, state, and local government agency records. Our field reconnaissance, data gathering and compilation was performed by Ms. Callie L. Cullum, Registered Environmental Assessor, with oversight by Mr. Brian Villalobos, Certified Engineering Geologist. At the client's request, the site structures and most of the site parcels were not entered into and the site reconnaissance was completed as a "drive-by/fence-line" investigation.

SITE DESCRIPTION AND GENERAL INFORMATION

1. The site is an irregular shaped parcel roughly bounded by San Bernardino Avenue to the north, city boundaries between Colton and Rialto to the west, by the I-10 freeway to the south, and by both Pepper Avenue and Hermosa Avenue to the east in the City of Colton, San Bernardino County, California. The subject site is comprised of approximately 353 acres. At the time of our investigation, the site consisted of vacant land, a golf course, residential homes, commercial/retail businesses, office complexes, and what appeared to be light industrial land use.

2. Based on information obtained during this investigation, the site appears to have been used for dry farming/grazing activities, possibly as early as the 1900's. Small groves were present on the southwestern, southeastern, and northeastern portions of the site in the 1930's. The southwestern grove was present until at least the mid-1950's. Morrow Field (a single runway airfield) was constructed on the subject site in 1942. The airfield was abandoned by 1980. The Colton Golf Club and the former Colton Recreational Lake were constructed on the site in the 1960's. The residential structures currently located on the northeastern portion of the site appear to have been present since at least the 1950's. In the 1960's, the far northeast corner of the site appeared to have been used for livestock corrals. Commercial-type structures

began appearing on the site in the 1950's, primarily south of W. Valley Boulevard. By the late-1980's most of the structures present today had been constructed. Historical information dating back to 1901 was reviewed during this investigation.

3. Several pole-mounted and pad-mounted transformers were observed on the site. It is unknown if the transformers contain polychlorinated biphenyls (PCBs).

4. Much of the site was vacant land. Miscellaneous debris was observed and included plastic, metal, wood, concrete, PVC pipes, a boat, tiles, furniture, landscape waste, carpet, dry wall, brick and other building materials, over 100 tires, asphalt, car parts, household items, motor oil bottles, five-gallon containers of paint, and trash. Two 55-gallon drums were observed in the former recreation pond. They were partially buried and appeared burnt from a recent small brush fire. The contents of the drums are unknown.

RECOGNIZED ENVIRONMENTAL CONDITIONS

Recognized environmental conditions (RECs) are defined by the American Society of Testing and Materials (ASTM) as any hazardous substance or petroleum product under conditions that indicate an existing, past, or material threat of release into the structures, ground, groundwater, or surface water at the subject site. If the presence of recognized environmental conditions are identified on a subject site, it may warrant additional research, site investigation, and/or action.

The following sites have had past releases which would catagorize them as recognized environmental conditions.

- 1600 W. Valley Boulevard, Former Shell/Valero Gas Station (part of the subject site). This facility had a reported release which has received agency closure.

- 2109/2111 W. Valley Boulevard, Price Club/Telco Foods (part of the subject site). This facility had a reported release which has received agency closure.

POTENTIAL ENVIRONMENTAL CONDITIONS

Potential environmental conditions pertain to any hazardous substance or petroleum product under conditions that suggest the possibility of an existing, past, or material threat of release into the structures, ground, groundwater, or surface water at the subject site, but for which not enough information was available through the means within the scope of this report. The identified presence of potential environmental conditions at the subject site may warrant additional research, site investigation, and/or action. Those items identified at the subject site or nearby properties, which are potential environmental conditions relative to the subject site are discussed below.

1. Although no obvious indications of recognized environmental conditions were identified, the following addresses are considered to be likely potential environmental concerns to the site due to the nature of the business or other observations made during Petra's site reconnaissance:

   - 401 Pepper Avenue, McNeilus Truck and Manufacturing
   - 791 Pepper Avenue, Bishop Central Storehouse-LDS Church.
   - 310 Rexford Street, Transport Components Rebuilder
   - 313 Rexford Street, Republic Machine and Fabrication
   - 319 Rexford Street, 5 Star Auto Body
   - 320 Rexford Street, AMCAl Machine Shop
   - 1313 W. Valley Boulevard, City Truck Yard
   - 1630 W. Valley Boulevard, Chadwick Auto Wholesale
   - 1700 W. Valley Boulevard, I-10 Auto Sales/ Budget Car Rental
   - 1849 W. Valley Boulevard, Stevens Transport
   - 1900 W. Valley Boulevard, Moss Bros Ford

- 2084 W. Valley Boulevard, PYP Hot Rod Shop/Ben Warner Towing
- 2111 W. Valley Boulevard, Telco Food Products
- Burned structures along W. Valley Boulevard (adjacent to "The Hub")

It is recommended that these facilities be inspected to confirm that they do not have the potential to adversely impact the subject site.

2. These sites have not had a reported release; however, the following facilities appear to have USTs and /or ASTs which could represent a potential concern should they have a release.

- 1500 W. San Bernardino Avenue, County of San Bernardino
- 791 N. Pepper Avenue, Bishop's Cental Stores / Colton Bishop Store House
- 1700 W. Valley Boulevard, California Auto Specialist/Inland Empire Toyota/Budget Truck Rental
- 1600 W. Valley Boulevard, Valero Service Station
- 1900 W. Valley Boulevard, Moss Bros. Ford
- 1988 W. Valley Boulevard, Grace WR & Co. Distribution Services/ Sammon's Trucking
- 1998 W. Valley Boulevard, Colton Auto Sales/Western Exterminator Company
- 2006 W. Valley Boulevard, Brad & Carol Larsen/Sierra Diesel Repair
- 2036 W. Valley Boulevard, Oroweat Foods Co/Bimbo Bakeries USA, Inc./Bestfoods Baking Company

It is recommended that these facilities be inspected. The ASTs should be inspected to confirm they are placed within secondary containment units.

The most current UST fit test documents should be reviewed to confirm the USTs have no indications of a release.

3. Based on information obtained from the agency database search, the following on-site facilities are listed as potential environmental concerns:

   - 401 N Pepper Avenue, McNeilus Truck & Manufacturing Inc. Although no releases have been reported from this site, it is listed on the CA WDS database as an industrial facility.

   - Moss Bros. Ford, 1900 W. Valley Boulevard. This facility reportedly has an above ground storage tank.

   - County of San Bernardino, 1500 W. San Bernardino Avenue. This facility may have had either a AST or UST.

   - Price Club/Telco Foods,, 2109/2111 W. Valley Boulevard. This facility had a reported release which has received agency closure. It is unknown if USTs are still present at this facility.

   It is recommended that these facilities be inspected to confirm that facility activities do not have the potential to adversely impact the subject site.

4. Groves were historically located on portions of the subject site. No information was obtained regarding pesticide and herbicide use in these areas.

   It is recommended that sampling of the near-surface soils should be conducted in the former grove areas to evaluate the potential for impact from past pesticide and herbicide use.

5. Based on information obtained from the agency database search, the following off-site facilities are listed as potential environmental concerns:

   - Arrowhead Regional Medical Center, 400 N. Pepper Avenue. This facility was included on the SLIC database. No additional information was obtained during this investigation to establish why it is on this database.

   - Chevron Station #9-6969, 101 Valley Boulevard (Rialto). This facility reportedly impacted drinking water. No additional

information was obtained during this investigation to determine the facility's potential impact to groundwater on the subject site.

It is recommended that a file review be conducted at the RWQCB and San Bernardino County Fire Department to obtain additional information regarding these facilities.

SITE CONSIDERATIONS

Items, if presented below, are not considered recognized environmental conditions in accordance with ASTM 1527-05. Although these items may warrant consideration in conjunction with any planned development activities, they are not recognized environmental conditions. The information regarding possible actions relative to these items has been provided as guidance.

1. Both pole-mounted and pad-mounted transformers were observed on the site. It is unknown if they contain polychlorinated biphenyls (PCBs).

   If the transformers are to be removed, it is recommended that the removal be completed by a licensed contractor or the utility company responsible for the transformers.

2. While the interior of the buildings were not observed, it is likely that they contain fluorescent light fixtures which may have ballasts containing PCBs. Additionally, fluorescent light tubes contain trace amounts of mercury.

   When these items are removed, they should be disposed of in accordance with current regulations.

3. Debris, including two partially buried drums, were observed on the site.

   It is recommended that the debris on the site be removed and disposed of in accordance with current regulations. The area under the debris should be reinpsected for staining.

4. While the structures were not inspected for asbestos-containing materials and lead-based paints, it is likely that the older (pre-1980's) structures contain these materials.

   It is recommended that the buildings be assessed for asbestos-containing materials prior to any demolition. If present, asbestos-containing materials should be abated prior to demolition in accordance with current regulations. The soil drip-lines of any structures should also be tested for lead-based paints.

5. Due to the historical presence of groves located on the site, it is possible that underground transite (asbestos-containing) irrigation pipes are present.

   If any transite pipes are encountered during grading, they should be removed intact and disposed of in accordance with current regulations.

6. It is unknown if septic tanks were historically present on the site.

   If encountered during grading operations, they should be removed and disposed of in accordance with current regulations.

PHASE I ENVIRONMENTAL SITE ASSESSMENT

Colton Super Block,
Approximately 353 Acre Site Roughly Bounded by San Bernardino Avenue,
Riverside Avenue, I-10 Freeway, and Hermosa Avenue,
City of Colton and City of Rialto, County of San Bernardino, California

1.0 INTRODUCTION

The information presented in this report includes the results of our recent field reconnaissance, a thorough review of various federal, state, and local government agency database records, and a review of historic aerial photographs and topographic maps for the site vicinity. This report includes a summary of our findings, our opinion as to the current environmental condition of the site, and recommendations for additional work if needed. At the client's request, all of the site structures and most of the site parcels were not entered into and the site reconnaissance was completed as a "drive-by/fence-line" investigation.

1.1 Purpose

This investigation was conducted to determine if any recognized environmental conditions exist on the subject site. Recognized environmental conditions are defined by the American Society for Testing and Materials (ASTM) as any hazardous substance or petroleum product under conditions that indicate an existing, past, or material threat of release into the structures, ground, groundwater, or surface water at the subject site.

This investigation is also intended to satisfy the requirement for conducting all appropriate inquiries into the previous ownership and uses of a property for the purposes of meeting the all appropriate inquiries provisions necessary to qualify for certain landowner liability protections under the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA).

We have performed this investigation in conformance with the scope and limitations of the standards set forth in the ASTM Practice E 1527-05 and the EPA's All Appropriate Inquiry (AAI) regulations 40 CFR Part 312.

1.2 Involved Parties

This report was prepared by the Environmental Division of Petra Geotechnical, Inc. (Petra), at the request of Michael Brandman Associates, for their exclusive use. Use of this report or reliance thereon by other parties or projects is not authorized. The report may not be suitable for other parties or other purposes.

2.0 SCOPE OF INVESTIGATION

The scope of this investigation included the following:

1. Performing a site reconnaissance to identify the current conditions and land use of the subject site and adjoining properties. Visual evidence of prior uses of the subject site and adjoining properties were noted. The site reconnaissance included a visual inspection of the site surface, where possible, and the site perimeter. At the client's request, the site structures and most of the site parcels were not entered into and the site reconnaissance was completed as a "drive-by/fence-line" investigation.

2. Researching historical land use of the subject site and vicinity by reviewing available historical aerial photographs, United States Geologic Survey (USGS) topographic maps, fire insurance maps, city directories, and maps and data provided by the client.

3. Performing a literature study to identify local and regional geological conditions.

4. Obtaining and reviewing a search of pertinent federal, state, and local regulatory agency databases concerning environmental conditions on and in the vicinity of the site. As specified in the ASTM and AAI standards, the following databases were searched using, at a minimum, the recommended search radius:

- Federal National Priority List (NPL) site list,
- Federal Delisted NPL site list,
- Federal Comprehensive Environmental Response, Compensation, and Liability Information System (CERCLIS) site list,
- Federal CERCLIS- No Further Remedial Action Planned (CERC-NFRAP) site list,
- Federal Resource Conservation and Recovery Act Information (RCRA) Corrective Action Report (CORRACTS) facilities list,
- Federal RCRA non-CORRACTS Treat, Store and Dispose (RCRA-TSD) facilities list,
- Federal RCRA generators list,
- Federal institutional control/engineering control registries,
- Federal Emergency Response Notification System (ERNS) list,
- State and tribal lists of hazardous waste sites identified for investigation or remediation including: State- and tribal-equivalent NPL, State, and tribal-equivalent CERCLIS lists,
- State and tribal landfill and/or solid waste disposal site lists,
- State and tribal leaking storage tank lists,
- State and tribal registered storage tank lists,
- State and tribal institutional control/engineering control registries,
- State and tribal voluntary cleanup sites, and
- State and tribal Brownfield sites.

In the interest of thoroughness, numerous non-ASTM and non-AAI required databases were also searched. These databases are listed and discussed in the database search included within this Phase I report.

5. Evaluating the presence of recognized environmental conditions at the subject site through visual observation and research of reasonably ascertainable records. Recognized environmental conditions may include the presence of hazardous materials, petroleum products, underground storage tanks (USTs), above ground storage tanks (ASTs), drums, chemical containers, polychlorinated biphenyls, liquid or solid wastes, oil wells, and areas indicative of potential contamination including stained soils and/or pavement, stressed vegetation, drains, sumps, pits, ponds, lagoons, odors, and septic systems.

6. Non-Scope Items. In addition to those items discussed above, several items outside the scope of ASTM Practice E 1527-05 and EPA regulation 40 CFR

Part 312 have been addressed in this investigation. The non-scope items include:

- Visual examination of the site for the potential presence of asbestos containing materials, and
- Visual examination of the site for the potential presence of lead-based paint.

7. Preparing a report presenting the results of our investigation.

Unless otherwise stated in this section, no other services, assessments, or testing were included in this study. This investigation did not included conducting a search for environmental liens and Activities and Use Limitations (AULs) for the property or completion of a file review at the local oversight agencies.

3.0 SITE OVERVIEW

According to the 1967 (photorevised 1980) topographic map of the San Bernardino South, California, Quadrangle, prepared by the USGS, the site is located in the northern portion of Section 24 and the northeastern portion of Section 23, Township 1 South, Range 5 West, as well as in the northwestern portion of Section 19, Township 1 South, Range 4 West, San Bernardino Base and Meridian. The site elevation ranges from approximately 1,040 feet above mean sea level (msl) in the south to 1,120 feet above msl in the north. A site vicinity map is included as Figure 1.

The site is an irregular shaped parcel roughly bounded by San Bernardino Avenue to the north, city boundaries between Colton and Rialto to the west, by the I-10 freeway to the south, and by both Pepper Avenue and Hermosa Avenue to the east in the city of Colton, San Bernardino County, California. The subject site is comprised of approximately 353 acres. At the time of our investigation, the site consisted of vacant land, a golf course, residential homes, commercial/retail stores, office complexes, and

what appeared to be light industrial land use. A plan showing the current configuration of the site is included as Figure 2.

4.0 PREVIOUS LAND USE

Based on information obtained during this investigation, the site appears to have been used for dry farming/grazing activities, possibly as early as the 1900's. On the 1901 topographical map, a single structure is shown on the site in the location of a small grove visible on the southeastern portion of the site on the 1930 aerial. Small groves are present on the southwestern, southeastern, and northeastern portions of the site in the 1930's. The southwestern grove was present until at least the mid-1950's.

Based on information provided by www.airfields-freeman.com regarding abandoned airfields in Western San Bernardino County, Morrow Field was constructed on the subject site in 1942. Morrow Field consisted of a single northeast/southwest runway with a ramp and single hanger. The runway was also reportedly used for drag racing. In the 1960's, on the properties south of the airfield, the owner of the airfield built a golf course (now call Colton Golf Club) and shallow lake (Colton Recreational Lake) used to tow water skiers. It appears that the airfield was abandoned by 1980 and the lake may have no longer been in use by the mid-1970's. The golf course is still present.

The residential structures currently located on the northeastern portion of the site appear to have been present since at least the 1950's. In the 1960's, the far northeast corner of the site appeared to have been livestock corrals.

Commercial-type structures began appearing on the site in the 1950's, primarily south of West Valley Boulevard. By the late-1980's most of the structures present today had been constructed.

Historical information reviewed during this investigation includes aerial photographs (dating back to 1930), USGS topographical maps (dating back to 1901), and city directories (dating back to 1922). EDR reports that there is no Sanborn™ Map coverage for the site vicinity.

5.0 PREVIOUS REPORTS

No reports were provided by the client for review. It should be noted that Petra's geotechnical division has prepared a due diligence geotechnical assessment report of their findings, dated April 28, 2008.

6.0 ENVIRONMENTAL SETTING

The following sections provide an overview of the regional and local geologic setting and includes information pertaining to groundwater conditions in the vicinity of the subject site. Geotechnical hazard information (faults, landslides, etc.) is not part of this investigation. This section does not constitute a geotechnical investigation of the subject site and should not be taken as such.

6.1 Geology

The subject site is located within the Peninsular Ranges Geomorphic Province that extends from the southern San Gabriel Mountains to the tip of Baja California. Tectonically, the property is located within the Perris Block bounded by the east-west trending Cucamonga fault to the north, and the northwest trending San Jacinto and Elsinore Fault Zones to the east and west respectively (Morton and Miller, 2006). The property exists on the geomorphic Rialto-Colton Terrace that extends from the San Gabriel Mountains in the north to the Santa Ana River Valley to the south. The Rialto-Colton Terrace is underlain by late Pleistocene to Holocene sand dune and fluvial

deposits (Morton and Miller, 2006). The property dominantly contains late Pleistocene sediments composed of slightly to moderately consolidated, fine to medium grained sand and lesser amounts of silty sand and slightly gravelly sand (Morton and Miller, 2006). The major active fault zone near the property is the San Jacinto fault located approximately two miles northeast of the eastern edge of the property (Hart and Bryant, 1997; Jennings, 1994). The Rialto-Colton fault represents a fault branch emanating northwest from the San Jacinto Fault Zone and is primarily concealed by Holocene sediments approximately one-half mile northeast of the site (Hart, 1977; Stephenson, et. al., 2002). The San Jacinto and Rialto-Colton faults act as groundwater barriers (Hart, 1977; DWR, 2004).

6.2 Surface and Groundwater Conditions

6.2.1 Surface Water

No indication of surface water was observed on the site at the time of this investigation. The topographic maps and aerial photographs show two small lakes on the golf course; however, Petra was not provided access to this property.

6.2.2 Groundwater

The subject site is located within the Upper Santa Ana Valley Groundwater Basin and appears to be located in the Riverside-Arlington Subbasin (California Department of Water Resources, 2003). According to the California Department of Water Resources, Historical Data by Well Retrieval Website, two wells appear to be within the same township, range and sections as the subject site. Well number 01S05W24H002S, located on or within 500 feet of the southern portion of the subject site, was last measured in April of 2000 at 173.6 feet below the ground surface. Well number 01S04W19E001S, located

on or within 1,200 feet of the southwestern portion of the subject site, was last measured in October of 1997 at 162.8 feet below the ground surface. Water-bearing deposits in the subbasin consist of sand, gravel, silt and clay deposited by the Santa Ana River and its tributaries. From 1985 through 2001, groundwater levels in the northeastern part of the subbasin, near the Santa Ana River, fluctuated approximately 20 feet. During 1995 to 2000, water level in the same area found to have declined 10 feet.

Groundwater gradient beneath the site varies due to a number of factors. As previously mentioned, the Rialto-Colton Fault is located approximately 1/4-mile northeast of the site. This fault acts as a barrier to the natural flow of groundwater in the region (Department of Interior, 1963). Also, the seasonal fluctuation of the Santa Ana River located to the southeast of the site can influence the flow of groundwater. According to Sam Fuller of the San Bernardino Valley Municipal Water District, high water in the river tends to cause groundwater beneath the site to flow towards the northwesterly direction (away from the river). In addition, the site is located in a "groundwater divide" with the large Chino groundwater basin on the western side. A "groundwater divide" is defined as an area between two adjacent groundwater basins, hence, the flow of groundwater can be affected by pumping demand from water wells located in the general area, and wells located in the Chino basin. At times, groundwater may flow towards the west due to pumping in the Chino basin.

7.0 RESULTS OF INVESTIGATION

The results of our site reconnaissance and inspection of adjacent sites, agency database review, and historical land use study are presented in the following sections.

7.1 Site Inspection

Petra conducted a reconnaissance of the subject site on April 30, 2008. Site photographs are included as Plate A and a completed Site Inspection Checklist is located in Appendix A. Per the client's request, none of the occupied properties or facilities were entered nor were the owners contacted. The findings of this report are based on a "drive-by/fence- line" observations of the site.

In general, the types of property observed included the following: manufacturing/office buildings, retail/food business, recreational facility, residential, and vacant land. If visible, a street address was obtained. Our site observations are summarized below.

General

- Electrical transmission lines were observed across portions of the site, near the residences along C Street, across the vacant parcels in the central portion of the site, east of the golf course, and in the general area of businesses located off of West Valley Boulevard. They appear to range from 66 kilovolts (kV) to 115 kV in capacity.

- Several pole-mounted and pad-mounted transformers were observed on the site. The pole-mounted transformers were located in the same areas as the transmission lines, and the pad- mounted transformers were observed at the World Prophetic Ministry Church, an unmarked structure (possibly Telco Food Products), and along the southern side of West Valley Boulevard. It is unknown if the transformers contain polychlorinated biphenyls (PCBs).

- Approximately 60 percent of the site was vacant land. Miscellaneous debris was observed on vacant land and included plastic, metal, wood, concrete, PVC pipes, a boat, tiles, furniture, landscape waste, carpet, dry wall, brick and other building materials, over 100 tires, asphalt, car parts, household items, motor oil bottles, five-gallon containers of paint, and trash. Two 55-gallon drums were observed in the area of the former recreation lake. They were partially buried and appeared burnt from a recent small brush fire. The contents of the drums are unknown.

- While the structures were not inspected for asbestos-containing materials and lead-based paints, it is likely that the older (pre-1980's) structures contain these materials.

- A concrete drainage was observed on the southeastern area of George E. Brown Jr. Park located on the north-central portion of the subject site. At the time of our site inspection, the drainage appeared to be dry.

Site Specific

Facilities on the site include both manufacturing and vehicle repair. Although these facilities were not inspected, the following concerns should be noted

- Items often found at manufacturing facilities may include (but not limited to) the following: clarifiers, USTs, ASTs, chemical storage, waste material storage, and solvent cleaning stations.

- Items often found at vehicle repair facilities may include (but not limited to) the following: clarifiers, USTs, ASTs, chemical storage, waste material storage, solvent cleaning stations, and hoists.

The table below discuss site specific observations.

Address	**Type of Use (name of business)**	**RECs**
Wildrose Avenue	Colton Recreational Lake.	Unknown, two partially buried drums (contents unknown), two structures.
491 Wildrose Avenue	EJK Center: Dannybuilt Truckmounts, Snap-on Auto Training Academy, M & B Cooling Specialists, Digital Printing, Javco Ornamental Works, Tata Bouncers, Designs by Davis Furniture	Unknown

Address	Type of Use (name of business)	RECs
unlisted address-San Bernardino Avenue	Portable-type buildings for Arrowhead Regional Medical Center (ARMC Village)	Unlikely
1750 San Bernardino Avenue	Carpenters Union Membership Training Center (Vacant)	Unlikely
625, 635, 645, 1225, 1227, 1245, and 1265 "C" Street	Residential	Unlikely
1275 "C" Street	RAI Care Center-outpatient dialysis facility	Unknown
401 Pepper Avenue	McNeilus Truck and Manufacturing, manufacture of cement trucks	Likely (See Note 1 above)
791 Pepper Avenue	Bishop Central Storehouse-LDS Church	Likely-large ASTs in back of property, one appeared to have a sign marked "phosphine gas" which is typically used as an indoor pesticide.
1099 San Bernardino Avenue	World Prophetic Ministry Church	Unknown, two pad-mounted transformers were present.
220 Rexford Street	Auction Meat and Seafood	Unknown
299 Rexford Street	unknown	Unknown
310 Rexford Street	Transport Components Rebuilder	Likely (See Note 2 above)

Address	Type of Use (name of business)	RECs
313 Rexford Street	Republic Machine and Fabrication	Likely (See Note 1 above)
319 Rexford Street	5 Star Auto Body	Likely (See Note 2 above)
320 Rexford Street	AMCAl Machine Shop	Likely, at least one hoist was visible. (See Note 2 above)
295 Hermosa Avenue	Acacia RV Performance Center	Likely (See Note 2 above)
325 Hermosa Avenue	Slover Mountain High School	Unlikely
345 Hermosa Avenue	residence	Unlikely
2040 Woodpine Avenue	County of San Bernardino Department of Public Social Services	Unlikely
1205 W. Valley Boulevard	Vacation Station RV	Likely (See Note 2 above)
1295 W. Valley Boulevard	Spas & Pools	Unknown
1313 W. Valley Boulevard	City Truck Yard	Likely, appears to have a maintenance area (See Note 2 above)
1405 W. Valley Boulevard	Colton Music Center (Piano City)	Unlikely
1600 W. Valley Boulevard	Valero Gas Station	Likely (See Note 2 above)
1620 W. Valley Boulevard	Baker's Tacos	Unlikely

Address	Type of Use (name of business)	RECs
1630 W. Valley Boulevard	Chadwick Auto Wholesale	Likely (See Note 2 above)
1700 W. Valley Boulevard	I-10 Auto Sales/ Budget Car Rental	Likely (See Note 2 above)
1759 W. Valley Boulevard	Auction Meats	Unknown
1763 W. Valley Boulevard	Auction Meats and Seafood	Unknown
1849 W. Valley Boulevard	Stevens Transport	Likely (See Note 2 above)
1900 W. Valley Boulevard	Moss Bros Ford	Likely (See Note 2 above)
1901 W. Valley Boulevard	Colton Golf Club	Unknown, maintenance shed and pole-mounted transformers present
2001 W. Valley Boulevard	The Hub Cocktail	Unlikely
W. Valley Boulevard (adjacent west of The Hub)	Appears to have been storage units. Several burned structures, debris, tires.	Likely-Dioxin (cancer causing) is typically associated with burnt debris.
2010 W. Valley Boulevard	Antique Furniture Auction	Unlikely
2012 W. Valley Boulevard	Marques Signs	Unknown
2014, 2016, 2018 W. Valley Bl.	residences	Unlikely

Address	Type of Use (name of business)	RECs
2036 W. Valley Boulevard	Oroweat/Entenmann's Bakery Outlet	Unknown (See Note 1 above)
2042 W. Valley Boulevard	Rodeway Motel	Unlikely
2048 W. Valley Boulevard	Landjet Motor Carriers	Unknown
2084 W. Valley Boulevard	PYP Hot Rod Shop, Hot Rod and Race Car Fabrication, Shoes, Ben Warner Towing	Likely (See Note 2 above)
2111 W. Valley Boulevard	Unmarked Structure (possibly Telco Food Products)	Likely, ASTs, pad mounted transformers, and sign marking "ammonia" observed
2245 W. Valley Boulevard	Contractor's Warehouse	Unknown
Sycamore Avenue	Water Well 18A	Unknown

7.2 Adjacent Site and Vicinity Observations

The site is situated in an area comprised of mix land use. Our specific observations are noted below:

North - Single-family homes and apartments were present north of the site beyond San Bernardino Avenue. A vacant lot and a retail center were present northeast of San Bernardino Avenue and Pepper Avenue. A park, Rialto Playhouse, and Rialto Fitness Center were located northwest of San Bernardino Avenue and Sycamore Avenue. Another water well was noted approximately two blocks north of San Bernardino Avenue and Meridian Avenue.

West - A mix of vacant land, an endangered species area, retail/commercial use, residential, a church, and a water well (Well #49?) were present west of the subject site.

East - A cemetery, the Arrowhead Regional Medical Center, and vacant land was present east of the site. Railroad tracks, a storage facility, and residences were present east beyond Hermosa Avenue.

South - A vacant strip of land, and the I-10 Freeway were present south of the site. Beyond the I-10 Freeway was a railroad yard and Slover Mountain, a quarry.

7.3 Government Agency Database Research

A search of federal, state, and local government listings was performed by Environmental Data Resources, Inc. (EDR) for the purposes of this report. The search radius used for all government databases meets or exceeds the standard search distance adopted by ASTM and AAI.

7.3.1 Results of Agency Records Search

A data search of the various government agency records listed in Appendix B revealed 57 listings for the subject site. Thirty-seven orphan sites (sites with inadequate address information to be mapped by EDR) were identified during the agency database search. Refer to the EDR Report in Appendix B for the search radii completed for this investigation. A brief description of the sites listed in the EDR report with addresses identified for the subject site is provided below. Additional sites with release within ¼-mile, or of concern due to the nature of their listings, are also discussed. Please note that the database information was reviewed for potential recognized environmental conditions based solely on the data provided in the EDR report. The condition of these sites could not be confirmed by a site visit.

Addresses Associated with the Subject Site

Site A1
Republic Machine & Fabrication, 313 Rexford Street, Colton, CA

This facility is located on the south-central portion of the subject site. It is listed on the Hazardous Waste Information System/ Facility and Manifest Data (HAZNET) and the San Bernardino County Fire Department Hazardous Materials Permits (San Bern. Co. Permit) databases. The HAZNET listing is for a site which generates, handles, or ships material requiring a waste manifest. No information which would indicate that this site presents a recognized environmental condition relative to the subject site was presented in the EDR report.

Sites B2, B3, C5 and C6
Alliance Colton - Drews Substation, 559 Pepper Avenue, Colton, CA

This facility is located near the east-central portion of the subject site. It was not observed during the site reconnaissance and may be located south of the Arrowhead Regional Medical Center in an area that was not accessible due to road construction. The facility was listed on the Facility Index System/Facility Registry System (FINDS), Aerometric Information Retrieval System (AIRS), and the Integrated Compliance Information System (ICIS) databases. This site appears to be a power substation which has permits from the Air Quality Management District (AQMD). Violations reported for this site appear to be for "non-penalty" compliance orders. No information which would indicate that this site presents a recognized environmental condition relative to the subject site was presented in the EDR report.

Site A4
Universal Mack Sales Service, 220 N. Rexford Street, Colton, CA

This facility is located on the south-central portion of the subject site. The address for the site was identified during the site reconnaissance as being associated with Auction Meat. The facility is listed on the Resource Conservation and Recovery Act Information, Small Quantity Generator (RCRA-SQG) and FINDS databases for a facility that generates and/or handle small quantity of hazardous material. No violations were reported. No information which would indicate that this site presents a recognized environmental condition relative to the subject site was presented in the EDR report.

Site D7, D8, and D9
California Auto Specialist/Inland Empire Toyota/Budget Truck Rental, 1700 W. Valley Boulevard, Colton, CA

This facility is located on the southern portion of the subject site. It is listed on the HAZNET, Statewide Environmental Evaluation and Planning System (SWEEPS UST), Hazardous Substance Storage Container (HIST UST), HAZNET, RCRA-SQG, FINDS, and San Bern. Co. Permit databases. The HAZNET listing is for a site which generates, handles, or ships material requiring a waste manifest. The FINDS and RCRA-SQG listings are for generation of small quantity of hazardous waste. No violations are reported for the RCRA-SQG listing. The HIST UST, SWEEP UST and San Bern. Co. Permit listings are for five onsite USTs that contain waste oil and gasoline. No releases have been reported from these tanks. However, due to the presence of USTs, this site is considered a potential environmental concern for the subject site.

Sites C10 and C11
McNeilus Truck & Manufacturing Inc., 401 N Pepper Avenue, Colton, CA

This facility is located on the east-central portion of the subject site. It is listed on the Toxic Chemical Release Inventory System (TRIS), Waste Discharge System (CA WDS), AIRS, FINDS and San Bern. Co. Permit databases. The San Bern. Co. Permit listing is for a facility that generates and/or handles hazardous material. The FINDS and AIRS listings are for emission of total organic hydrocarbon gases. The TRIS listing is for a facility that release toxic chemicals to the air, water and land in reportable quantities. The CA WDS listing is for a facility that has been issued waste discharge requirements. No violations are reported. However, due to the site listed on the CA WDS listing as an industrial facility, this site is considered a potential environmental concern for the subject site.

Sites E12 and E13, 43
Bishop's Cental Stores / Colton Bishop Store House, 791 N. Pepper Avenue, Colton, CA

This facility is located on the east-central portion of the subject site. It is listed on the UST, San Bern. Co. Permit, HAZNET, SWEEPS UST, and HIST UST databases. This facility reportedly has four USTs and appears to

also be permitted for ASTs. No releases were reported. However, due to the presence of USTs and ASTs, this site is considered a potential environmental concern for the subject site. The address provided by EDR for Site 43 appears to be incorrect.

Sites F19, F20, and F21
Auto Centro / B&G Auto Sales, 1630 W. Valley Boulevard, Colton, CA

This facility is located on the southern portion of the subject site. It is listed on the RCRA-SQG, FINDS, HAZNET, and San Bern. Co. Permit databases for a facility that generates and/or handle hazardous material, with listed substances including tetrachloroethylene and aqueous solution. No releases or violations are reported. No information which would indicate that this site presents a recognized environmental condition relative to the subject site was presented in the EDR report.

Sites G22 -G25
CC Western/Central Transport Inc., 1849 W. Valley Boulevard, Colton, CA

This facility is located on the south-central portion of the subject site. It is listed on the Hazardous Materials Information Reporting System (HMIRS) and HAZNET databases. The HAZNET listing is for a facility that generates and/or handle organic liquid mixture, acidic liquids with metals and other organic solids. No violations are reported for the HAZNET listings. The HMIRS listings are for a spillage of 0.5 gallon of isobutanol in 1995, one-gallon of trichloroethane in 1994, and five-gallons of styrene monomer in 1995. Due to the nature of the incidents and the small quantities released, these releases do not appear to present a recognized environmental condition relative to the subject site.

Sites F26 -F29
Orange Shell - Colton / Zakaria Haggag / Shell Service Station, 1600 W. Valley Boulevard, Colton, CA

This facility is located on the southern portion of the subject site. It is listed on the UST, HIST UST, San Bern. Co. Permit, Leaking Underground Storage Tank (LUST), RCRA-SQG, FINDS, HAZNET, and SWEEPS UST databases. The UST, HIST UST, San Bern. Co. Permit and SWEEPS UST listings are for five onsite underground storage tanks used for storage of waste oil and gasoline. The LUST listing is for a reported leak in March of

2003. The leak impacted soil only and received case closure in 2005. However, due to the presence of USTs and the facility having a reported release, this site is considered a potential environmental concern for the subject site.

Sites F31 and F32
Don Morrison /California Auto Specialities, 1595 W. Valley Boulevard, Colton, CA

This address was not identified during the site reconnaissance; however, based on the address it should be located on the southern portion of the subject site. It is listed on the HAZNET database for a facility that generates and/or handles materials requiring a waste manifest. No violations or releases are reported. No information which would indicate that this site presents a recognized environmental condition relative to the subject site was presented in the EDR report.

Sites H33 and H36
Colton Golf Course, 1901 Valley Boulevard, Colton, CA

This facility is located on the central portion of the subject site. It is listed on the San Bern. Co. Permit and HAZNET databases for a facility that generates and/or handle hazardous material such as waste oil and mixed oil, and off-specification, aged or surplus organics. No releases or violations are reported. No information which would indicate that this site presents a recognized environmental condition relative to the subject site was presented in the EDR report.

Sites H34 and H35
Moss Bros. Ford, 1900 W. Valley Boulevard, Colton, CA

This facility is located on the southern portion of the subject site. It is listed on the FINDS, HAZNET and San Bern. Co. Permit databases for an onsite above ground storage tank and a facility that generates and/or handle unspecified solvent mixture waste, waste oil and mixed oil, and aqueous solution with less than 10% total organic residues. No releases or violations are reported. However, due to the presence of a AST, this site is considered a potential environmental concern for the subject site.

Site 37
Carpenters Joint Apprent & Trng., 1750 San Bernardino Avenue, Colton, CA

This facility is located on the southern portion of the subject site. It is listed on the San Bern. Co. Permit database for generation and handling of hazardous materials. The site facility status is currently listed as inactive under both their handler and generator permits. The generator permit is listed as expired in 2004. During our site reconnaissance, the facility appeared to be closed and currently vacant. No information which would indicate that this site presents a recognized environmental condition relative to the subject site was presented in the EDR report.

Site 38
Corner of Pepper / San Bernardino Avenue, Colton, CA

This listing appears to be for a one-time release at the intersection. It is listed on the California Hazardous Material Incident Report System (CHMIRS) database. A reported incident date of February 1988 was listed but the nature of the incident was not reported. According to the time of incident provided in the EDR, it appears that this incident was reported and completed within two hours. This may have been a traffic accident occurring at the intersection of the two streets involving spillage and clean up of hazardous material. Due to the one-time nature of the release and length of time since the incident, this listing does not appear to present a recognized environmental condition relative to the subject site.

Sites J41 and J42
Grace WR & Co. Distribution Services / Sammon's Trucking, 1988 W. Valley Boulevard, Colton, CA

This address was not identified during the site reconnaissance; however, based on the address it should be located on the southern portion of the subject site. It is listed on the SWEEPS UST, FINDS and RCRA-NonGen databases. The SWEEPS UST listing is for an underground storage tank. The FINDS and RCRA-NonGen listings are for a facility that does not currently generate hazardous waste. No releases or violations are reported. However, due to the presence of a UST, this site is considered a potential environmental concern for the subject site.

Site K44
World Prophetic Ministry, 1099 N. Pepper Avenue, Colton, CA

This facility is located on the northern portion of the subject site. It is listed on the HAZNET, FINDS and RCRA-SQG databases for a facility that generates and/or handle small quantity of hazardous material. Listed materials included benzene, tetrachloroethylene, trichloroethylene, liquids with halogenated organic compounds greater than 1,000 mg/l, waste oil and mixed oil. No violations or releases are reported. No information which would indicate that this site presents a recognized environmental condition relative to the subject site was presented in the EDR report. However, due to the nature of the listings in comparison with the type of business (church), additional information regarding the operations and historical operations for this site should be investigated.

Sites J45 and J46
Colton Auto Sales / Western Exterminator Company, 1998 W. Valley Boulevard, Colton, CA

This address was not identified during the site reconnaissance; however, based on the address it should be located on the southern portion of the subject site. It is listed on the HIST UST and HAZNET databases for an underground storage tank containing gasoline, and a facility that generates and/or handle hazardous material such as waste oil and mixed oil. No violations or releases are reported. However, due to the presence of a UST, this site is considered a potential environmental concern for the subject site.

Sites J49 and J50
Brad & Carol Larsen / Sierra Diesel Repair, 2006 W. Valley Boulevard, Colton, CA

This facility is located on the southern portion of the subject site. It is listed on the SWEEPS UST, San Bern. Co. Permit and HAZNET databases. The SWEEPS UST listing is for an onsite underground storage tank. The San Bern. Co. Permit listing is for an aboveground storage tank and a facility that generates and/or handle hazardous material. The HAZNET listing is for a facility that generates and/or handle hazardous material such as photo-chemicals and photo-processing waste. No violations or releases are reported. However, due to the presence of both a AST and UST, this site is considered a potential environmental concern for the subject site.

Site 53
1X County of San Bernardino, 1500 W. San Bernardino Avenue, Colton, CA

This address was not identified during the site reconnaissance; however, based on the address it should be located on the northern portion of the subject site. It is listed on the HAZNET database for a facility that generates and/or handle hazardous material, listed in the EDR report as tank bottom waste. No violations or releases are report. There was no additional information in the EDR report to confirm if there was a tank on this site. However, due to the potential presence of either a AST or UST, this site is considered a potential environmental concern for the subject site.

Sites N56 and N58, AG129
Oroweat Foods Co/Bimbo Bakeries USA, Inc./Bestfoods Baking Company, 2036 W. Valley Boulevard, Colton / Rialto, CA

This facility is located on the southern portion of the subject site. It is listed on the SWEEPS UST, San Bern. Co. Permit and HAZNET databases. The San Bern. Co. Permit listings is for two permits for a facility that generates and/or handle hazardous material, which both expired in 2007. The SWEEPS UST listing is for an underground storage tank. The HAZNET listing is for generation and handling of unspecified organic liquid mixture. No violations or releases are reported. However, due to the presence of a UST, this site is considered a potential environmental concern for the subject site.

Site N61
Landjet Motor Carriers, 2048 W. Valley Boulevard, Colton, CA

This facility is located on the southern portion of the subject site. It is listed on the San Bern. Co. Permit database for a facility that generates and/or handle hazardous material. No violations or releases are reported. No information which would indicate that this site presents a recognized environmental condition relative to the subject site was presented in the EDR report.

Sites P65, P66 and P68
Colton Joint Unified School District/Warehouse, 1313 W. Valley Boulevard, Colton, CA

This facility is located on the southern portion of the subject site. It is listed on the HAZNET, San Bern. Co. Permit, FIFRA/ TSCA Tracking System (FTTS INSP), and Historical FIFRA/ TSCA Tracking System (HIST FTTS) databases. The HAZNET and San Bern. Co. Permit listings are for a facility that generates and/or handle hazardous materials. Listed materials included unspecified organic liquid mixture, polychlorinated biphenyls and material containing PCBs, unspecified aqueous solution, and unspecified solvent mixture waste. The FTTS INSP and HIST FTTS listings are for a facility that undergoes inspections and enforcements per the Federal Insecticide, Fungicide & Rodenticide Act and Toxic Substance Control Act. No information which would indicate that this site presents a recognized environmental condition relative to the subject site was presented in the EDR report.

Site Q67, Q69, Q70, and R-72 -R77
Price Club/Telco Foods., 2109/2111 W. Valley Boulevard, Colton, CA

This facility is located on the south-western portion of the subject site. It is listed on the SWEEPS UST, Emergency Response Notification System (ERNS), CHMIRS, AIRS, San Bern. Co. Permit, HAZNET, and LUST databases. The SWEEPS UST listing is for the location of three USTs. The CHMIRS and ERNS listings are for a leak of ammonia into the atmosphere caused by failure of equipment in 2002. Four permits were listed for the site under the San Bern. Co. Permit database. The permits are for a risk management plan - level III, CALARP facility, EPCRA facility and handling of hazardous material. The HAZNET listing is for generation of hazardous material such as metal sludge, inorganic solid waste, unspecified oil-containing waste, waste oil and mixed oil. AIRS listing is for emission of carbon monoxide. The LUST listing is for a reported leak of gasoline in 1997. The LUST listing received case closure in July of 2007. It is unknown if USTs are still present at this facility. Therefore, due to the potential presence of USTs and the facility having a reported release, this site is considered a potential environmental concern for the subject site.

Sites U86 and U87
Slover Mountain High School, 325 Hermosa Avenue, Colton, CA

This facility is located on the eastern portion of the subject site. It is listed on the HAZNET and FINDS databases for a facility that generates and/or handle hazardous material such as asbestos-containing waste. No violations or releases are reported. No information which would indicate that this site presents a recognized environmental condition relative to the subject site was presented in the EDR report.

Site W92
AT&T Mobility Colton #13829, 1205 ½ W/ Valley Boulevard, Colton, CA

This facility is located on the south-central portion of the subject site. It is listed on the San Bern. Co. Permit database for being a un-staffed remote facility that handles hazardous material. No violations or releases are reported. No information which would indicate that this site presents a recognized environmental condition relative to the subject site was presented in the EDR report.

Site W93
Parkhouse Tire, 1205 W. Valley Boulevard, Colton, CA

This facility is located on the eastern portion of the subject site. It is listed on the HAZNET database for a facility that generates and/or handle hazardous material such as oil/water separation sludge and aqueous solution with 10% or more total organic residues. No violations or releases are reported. No information which would indicate that this site presents a recognized environmental condition relative to the subject site was presented in the EDR report.

Addresses Located within 1/4-Mile of the Subject Site with Releases

Sites C14 - C18
Arrowhead Regional Medical Center, 400 N. Pepper Avenue, Colton, CA

This site is located adjacent to the east-central portion of the subject site. It is listed on the Spills, Leaks, Investigations and Cleanups (SLIC), FINDS, UST, CA WDS, HAZNET, AIRS, San Bern. Co. Permit and CHMIRS databases. Details associated with the SLIC listing are not reported on the

EDR search. The CHMIRS listing is for a spilled bottle of potassium hydroxide. The UST listing is for an underground storage tank on site. The AIRS listing is for emission of carbon monoxide under permits issued by the AQMD. The rest of the listings are for generating and handling of medical/organic waste. Due to the presences of USTs and the facility being on the SLIC database, this site is considered a potential environmental concern for the subject site.

Site F30
1599 Valley Boulevard, Fontana, CA

This site is located adjacent to the east of the subject site. It is listed on the database for a diesel fuel release that occurred in 2000 after a semi-truck accident. The listing stated that the incident occurred on the roadway and that the spill was contained. Due to the nature of the release, the listing does not appear to present a recognized environmental condition relative to the subject site.

Site AA113, AD123-AD, AG133
10-10 Truck Stop, 195 E. Valley Boulevard, Rialto, CA

This site is located approximately ⅛-mile to the west of the subject site. It is listed on the ERNS, UST, LUST, and HIST UST databases. The ERNS listing is for an emergency release of 100 gallons of diesel fuel in 1991. The release impacted soil only. The UST listing is for the location of a UST. The LUST listing is for a release in 1998 that impacted soil only and received agency closure in 2007. The HIST UST is for a site which historically had at least five USTs. Due to the releases impacting soil only and the LUST listing having received closure, this facility does not appear to present a recognized environmental condition relative to the subject site.

Sites AF127 and AF128
Southern Pacific Rail Yard / Union Pacific Railroad Co., 200 Marion Way, Bloomington, CA

This site is located approximately ¼-mile southwest, downgradient, of the subject site. It is listed on the LUST, San Bern. Co. Permit, DTSC's Hazardous Waste and Substances Site List (CORTESE), Toxic Pits Cleanup Act Sites (Toxic Pits), AIRS, and SWEEPS UST databases. The San Bern. Co. Permit listing is for a facility that generates and handles hazardous

materials. The LUST and SWEEPS UST listings are for a release of diesel fuel from an underground storage tank in 1988. The release impacted soil only and the site received case closure in 1991. The AIRS listing is for operating a facility that has emission under AQMD permits. The CORTESE listing is for a facility which has operational criteria from government databases. The Toxic Pits listing is for the past operation of a toxic pit on the site which ceased operation in 1991. Due to the distance from the subject site, the LUST listing impacting soil only and receiving agency closure, this facility does not appear to present a recognized environmental condition relative to the subject site.

Sites AG134 -AG140
Chevron Station No.96969 / #9-6969 / #6969, 101 Valley Boulevard, Rialto, CA

This site is located approximately ⅛-mile to the west of the subject site. It is listed on the RCRA-SQG, RCRA-LQG, FINDS, HAZNET, UST, HIST UST, SWEEPS UST, San Bern. Co. Permit, LUST, California Facility Index/ Facility Inventory Database (CA FID UST) databases. The RCRA-SQG, RCRA-LQG, FINDS and HAZNET listings are for generation and handling of small and large quantities of hazardous material. The UST, HIST UST, CA FID UST, and SWEEPS UST listings are for at least four underground storage tanks. The San Bern. Co. Permit listing is for handling of hazardous material and owning and operating underground storage tanks. The LUST listing is for a product released discovered during a tank closure in 1993. The release reportedly impacted drinking water wells but received agency closure in 2000. No additional information could be obtained regarding the impacted groundwater from this site; therefore, this site is considered a potential environmental concern for the subject site.

Site AG141 City of Rialto Texaco, 102 Valley Boulevard, Rialto, CA

This site is located approximately ⅛-mile to the west of the subject site. It is listed on the LUST and CORTESE databases. The CORTESE listing is for a facility which has operational criteria from government databases. The LUST listing is for a product released discovered during a tank closure in 1991. The release impacted soil only and the site received case closure in 1992. Due to the release impacting soil only and the case receiving closure, this facility does not appear to present a recognized environmental condition relative to the subject site.

Site AG142 through AG146, AI150
Thrifty Oil Co. #323 / Arco #09695, 111 Valley Boulevard, Rialto, CA

This site is located approximately ⅛-mile to the west of the subject site. It is listed on the RCRA-SQG, FINDS, UST, HAZNET, CA FID UST, SWEEPS UST, San Bern. Co. Permit, HIST UST and LUST databases. The RCRA-SQG, FINDS and HAZNET listings are for generation of small quantity of hazardous materials such as benzene and other organic solids. The San Bern. Co. Permit listing is for handling and generating hazardous materials, and ownership and operation of four underground storage tanks. The CA FID UST, HIST UST, and SWEEPS UST listings are for five underground storage tanks used for storing petroleum product and waste oil. The LUST listing is for a product released discovered in 1997. The release impacted soil only and the site is reportedly undergoing preliminary assessment. Due to the release impacting soil only, this facility does not appear to represent a recognized environmental condition with regards to the subject site.

Site AI153
Texaco Service Station, 120 Valley Boulevard, Rialto, CA

This site is located over ⅛-mile to the west of the subject site. It is listed on the LUST and CORTESE databases for a release of waste oil discovered in 1996. The release impacted soil only and case closure was granted in 1997. Due to the release impacting soil only and the case receiving closure, this facility does not appear to present a recognized environmental condition relative to the subject site.

Sites Y97 - Y102, AE120-122
Cal Nev Pipeline Colton / Cal Nev Colton Terminal, 2051 Slover Avenue, Colton / Bloomington, CA

This site is located approximately ½-mile south of the subject site. It is listed on the San Bern Co. Permits, CHMIRS, ERNS, SLIC, HAZNET, RCRA-LQG, SWEEPS UST, UST, and AST databases. The San Bern. Co. Permit listings are for a AST, a Emergency Planning and Community Right To-Know Act (EPCRA) facility. The CHMIRS listing is for cleanup of a spill in 1989 and 1995. The ERNS listing is for diesel spills in 1990 and 1992. The SLIC listing is for jet fuel, no other information was provided. The HAZNET listing were for generation or handling of material requiring a waste manifest. The RCRA-LQG was for a handler/generator of 1,000

kilograms or more of hazardous waste during any month. Waste types listed included batteries, lamps, pesticides, thermostats, and ignitable hazardous wastes. The SWEEPS UST and UST listings are for at least one UST at the facility. The AST listing is for at least one AST at the facility. Petra reviewed documents for this facility, and another "Colton Terminal" listed for 2359 Slover Avenue, on the Geotracker website. These documents show groundwater gradient to be toward the south, away from the subject site. Due to the distance from the subject site and the groundwater gradient away from the subject site, this facility does not appear to present a recognized environmental condition relative to the subject site.

Sites Z103-Z108 and AC117
General American Transportation Corp. / GATX Rail, Pepper Avenue / Slover Street, Colton, CA

This site is located approximately ½-mile south of the subject site. It is listed on the AIRS, HAZNET, CHMIRS, FINDS, RCRA-LQG, HIST UST, Corrective Action Report (CORRACTS), Resource Conservation and Recovery Act Information, Treat, Store and Dispose (RCRA-TSDF), and CERCLIS- No Further Remedial Action Planned (CERC-NFRAP), and San Bern Co. Permit databases. The AIRS listing is for a facility under jurisdiction of the AQMD. The HAZNET listing is for generating and handling of organic solids, and unspecified solvent mixture waste. There are two CHMIRS listings. One listing is for discovery of six 5-gallon paint containers abandoned on the rail yard. The second listing is for illegal dumping of 30 gallons of acid in 1994. The RCRA-LQG and RCRA-TSDF listings are for generation, treating and storing of large quantity of hazardous materials. The HIST UST listing is for four underground storage tanks used for petroleum products and waste oil. The CORRACTS listing is for violations in areas such as contingency plan and emergency procedures, container use and management, general facility standards, financial requirements, closure/post-closure, and generators dating back to 1987. The facility was assigned a low corrective action priority. The CERCLIS-NFRAP assessment history listed the site's priority level as "no further remedial action planned." The San Bern Co. Permits is for a site with ASTs, USTs, and a "Right to Know" plan in place. Although gradient direction maps could not be found for this facility, it is located in the same general area as the Colton Terminal, discussed above as Sites Y97 - Y102, and AE120-122 and is expected to have a similar groundwater gradient. Therefore, due to the distance from the subject site, the CERCLIS status as "no further remedial action planned," and the expected groundwater gradient away from the

subject site, this facility does not appear to present a recognized environmental condition relative to the subject site.

Site AK-160
Colton Terminal / Conoco Phillips Colton Terminal East, 271 E. Slover Avenue, Rialto, CA

This site is located approximately ½-mile south of the subject site. It is listed on the HIST UST, CA WDS, AST, RCRA-SQG, FINDS, HAZNET and SLIC databases. The HIST UST and AST listings are for at least two aboveground and/or underground storage tanks used for storing diesel fuel and waste. The CA WDS listing is for a facility that treats and/or disposes of liquid or semisolid wastes from servicing, producing, manufacturing or processing operations. The facility is categorized with "Minor Threat to Water Quality," and is also on a bimonthly self-monitoring program. The RCRA-SQG, FINDS and HAZNET listings are for generating and handling of small quantity of hazardous materials such as lead, benzene and other organic solids. The facility is classified as a SLIC site under the SLIC database however no other information on spills or cleanups were listed. Although gradient direction maps could not be found for this facility, it is located in the same general area as the Colton Terminal, discussed above as Sites Y97 - Y102, and AE120-122 and is expected to have a similar groundwater gradient. Due to the distance from the subject site and the expected gradient direction away from the subject site, this facility does not appear to present a recognized environmental condition relative to the subject site.

Orphan Sites

Orphan sites are unable to be located due to lack of complete address information. Thirty-eight orphan sites are listed in the EDR report. Orphan sites may appear on more than one database. A summary of the orphan sites is provided below.

- Thirteen sites are listed on the San Bern. Co. Permit database,
- ten sites are listed on the HAZNET database,
- two sites are listed on the Clandestine Drug Lab (CDL) database,
- four sites are listed on the LUST database,
- one site is listed on the ERNS database,

- one site is listed on the DRYCLEANERS database,
- one site is listed on the FINDS database,
- one site is listed on the SLIC database,
- one site is listed on the CA FID UST database,
- one site is listed on the AIRS database,
- one site is listed on the CERC-NFRAP database,
- one site is listed on the DTSC's EnviroStor Database (ENVIROSTOR) database,
- one site is listed on the School Property Evaluation Program (SCH) database, and
- one site is listed on the CORTESE database.

Based on information contained in the EDR report, Pure Energy (Alliance Colton) is located on the subject site and has a FINDS listing. It is also listed on the EDR database as Sites B2, B3, C5 and C6. Entenmann's Oroweat is listed on the EDR database as Sites N56 and N58 and has a CAL FID and SWEEPS UST listing. Melchor Briceoceno, which has a HAZNET listing, may also be located on the southern portion of the subject site. 10-10 Truck Stop, also listed as AA-113, is located approximately ⅛-mile from the subject site and has a SWEEPS UST listing. The Arco Products Co. site appears to be located within ½-mile of the subject site and has a HAZNET listing. All other listings on the orphan sites appear to be located over ½-mile from the subject site. Based on the nature of the listings and/or the distance of the orphan sites from the subject site, none of the orphan sites appear to present a recognized environmental condition with respect to the subject site.

7.3.2 Local Agencies

Petra reviewed information held by the agencies listed below during the course of this investigation.

A. San Bernardino County Fire Department Hazardous Materials Division

The San Bernardino County Fire Department Hazardous Materials Management Division maintain records related to underground storage tanks and medical waste, hazardous materials, hazardous waste and waste oil generators/handlers in the County of San Bernardino. Records held by these agencies were accessed by EDR during the government database search. Sites with listings of concern were discussed above.

B. California Regional Water Quality Control Board

The California Regional Water Quality Control Board - Santa Ana Region (RWQCB) maintains records of leaking underground storage tanks sites and groundwater cleanups for sites in the City of Colton in San Bernardino County. Records held by the CRWQCB were accessed by EDR during the government database search. Sites with listings of concern were discussed above.

C. Geotracker

The Geotracker website maintains a record of environmental data for regulated facilities in California. Three database listings for the subject site were reported on Geotracker. The listed sites were for the gas station located at 1600 Valley Boulevard, Telco Foods at 2111 W. Valley Boulevard, and Bishop's Central Stores at 791 N. Pepper Avenue. A discussion of these sites follows:

- The gas station at 1600 Valley Boulevard is listed as a former Shell Station (it is currently a Valero station). The station has a permitted UST. It also had a release that impacted soil only and has received agency closure. According to the closure report, groundwater was not encountered up to the total depth drilled of 136 feet below grade.

- The Telco Foods listing is for the removal of three 20,000-gallon tanks with agency closure. No remediation was required for the site.

- The Bishop's Center Store listing is for the location of a permitted UST.

Based on information presented on the Geotracker website, no vicinity sites appear to represent a recognized environmental condition with regards to the subject site.

Petra attempted to find additional information to evaluate the following vicinity sites with regards to impacting the subject site, but no useful information was obtained:

- Arrowhead Medical Center at 400 N. Pepper Avenue
- Chevron Station #9-6969, 101 Valley Boulevard (Rialto)

Selected information from the Geotracker website is include in Appendix C.

D. Federal Emergency Management Agency

According to the Federal Emergency Management Agency (FEMA) Flood Map Panel 06071C8678F, dated March 18, 1996, the subject site is designated as Zone X (unshaded). Unshaded Zone X is designated as areas determined to be outside the 500-year floodplain. The memorandum documenting this inquiry is included in Appendix B.

E. California Division of Oil, Gas, and Geothermal Resources

According to the California Division of Oil, Gas, and Geothermal Resources (DOGGR) Wildcat Maps W1-4 and W1-7 (2000), there are no active or abandoned oil, gas, water flood, water disposal, or steam wells located on the subject site. Further, there were no indications of any such wells found during our reconnaissance of the subject site. The memorandum documenting this inquiry is included in Appendix B.

7.3.3 Evaluation of Records Search Results

In summary, 12 sites were identified in our search of various government agency database records which may have impacted the soils or groundwater beneath the subject site or have the potential to impact the subject site. These facilities are as follows:

- California Auto Specialist/Inland Empire Toyota/Budget Truck Rental, 1700 W. Valley Boulevard. Due to this facility having USTs, it is considered a potential environmental concern for the subject site.

- McNeilus Truck & Manufacturing Inc., 401 N Pepper Avenue. Due to this facility being listed on the CA WDS database, it is considered a potential environmental concern for the subject site.

- Bishop's Cental Stores / Colton Bishop Store House, 791 N. Pepper Avenue. Due to this site having USTs and ASTs, it is considered a potential environmental concern for the subject site.

- Orange Shell - Colton / Zakaria Haggag / Shell Service Station, 1600 W. Valley Boulevard. Due to a former release and this facility having USTs, it is considered a potential environmental concern for the subject site.

- Moss Bros. Ford, 1900 W. Valley Boulevard. Due to this facility having ASTs, it is considered a potential environmental concern for the subject site.

- Grace WR & Co. Distribution Services / Sammon's Trucking, 1988 W. Valley Boulevard. Due to this facility having a UST, it is considered a potential environmental concern for the subject site.

- Colton Auto Sales / Western Exterminator Company, 1998 W. Valley Boulevard. Due to this facility having a UST, it is considered a potential environmental concern for the subject site.

- Brad & Carol Larsen / Sierra Diesel Repair, 2006 W. Valley Boulevard. Due to this site having both a AST and UST, it is considered a potential environmental concern for the subject site.

- County of San Bernardino, 1500 W. San Bernardino Avenue. Due to the potential presence of either a AST or UST, this site is considered a potential environmental concern for the subject site.

- Oroweat Foods Co/Bimbo Bakeries USA, Inc./Bestfoods Baking Company, 2036 W. Valley Boulevard. Due to the presence of a UST, this site is considered a potential environmental concern for the subject site.

- Price Club/Telco Foods,, 2109/2111 W. Valley Boulevard. Due to the potential presence of USTs and the facility having a reported release, this site is considered a potential environmental concern for the subject site.

- Arrowhead Regional Medical Center, 400 N. Pepper Avenue. Due to the presences of USTs and the facility being on the SLIC database, this site is considered a potential environmental concern for the subject site.

- Chevron Station #9-6969, 101 Valley Boulevard (Rialto). Due to the LUST listing showing drinking water to have been impacted, and the lack of information regarding this impact, this site is considered a potential environmental concern for the subject site.

7.4 Results of Aerial Photo Analysis

Although aerial photographs can often be a valuable source of information in the assessment of historical land usage, it should be understood that information extrapolated from photographic images is strictly interpretation and not necessarily fact. For this reason, it may not be appropriate to draw conclusions regarding previous site activities based solely upon aerial photograph analysis.

In order to provide a complete updated assessment of historical land usage on and in the vicinity of the subject site, aerial photographs with coverage of the subject site and vicinity were obtained from EDR and viewed by a representative of this firm. Photographs from the years 1930, 1938, 1953, 1966, 1978, 1999, 1995, and 2002 were provided by EDR. A summary of the information obtained during the aerial photograph review follows. Copies of the aerial photographs obtained from EDR are included in Appendix C.

1930 and 1938

In the 1930 photograph, the majority of the site appears as vacant, disced land, possibly used for dry farming and/or grazing activities. West Valley Boulevard is present

crossing from east to west on the southern portion of the site. Dirt roads are visible crossing the site from the north to the south, and from the northwest to the southeast. Groves(possibly citrus) are present on the northeastern portion and parts of the eastern portion of the site. At least two structures are visible in the areas of the groves located on the eastern portion of the site. The westernmost portion of the site does not appear on the 1930 photograph. Similar land use is visible adjacent to the north, south, and east.

On the 1938 photograph, the site appears similar to that observed on the 1930 photograph. Groves are visible on the southwestern portion of the site. A structure is visible in the center of the site.

1953

In the 1953 photograph, the only agricultural land use on the site appears to be a grove on the southwest corner and possibly a small area on the northeast corner of the site. A small airfield is present on the western portion of the site (Morrow Field). The airstrip crosses from off-site onto the western portion of the site. Structures associated with the airfield are present on the western portion of the site, south of the runway. Additional structures are visible along the southern and eastern portions of the site. There is an increase in dirt roads crossing the site.

The I-10 freeway is visible along the southern boundary of the subject site. The agricultural land located east of the site has been replaced with residential tracts.

1966

In the 1966 photograph, a rectangular man-made water feature appears on the western portion of the site (Colton Recreational Lake), south of the airstrip. A golf course with two small ponds is visible to the east of the water feature. A large structure (warehouse-type) has been constructed at the 2245 W. Valley Boulevard address, replacing the grove previously located there. The northeast corner of the site appears to be divided up into small sections as if to contain livestock. There are a few areas that have been cleared of vegetation, primarily on the southern and western portions of the site. Additional structures and development appears south of West Valley Boulevard and in the southeastern corner of the site.

Commercial or light industrial development is visible to the west of the southwestern portion of the site. San Bernardino Avenue, located adjacent to the northern boundary of the site, appears to be paved.

1978

In the 1978 photograph, the site and vicinity appear similar to that observed on the 1966 photograph; with the exception of a slight increase in the number of structures and development located south of W. Valley Boulevard. The structure at 2245 W. Valley Boulevard has been expanded. Additional structures have been constructed primarily on the southern and eastern portions of the site. The structure at 791 Pepper Avenue has been constructed. The outline of the rectangular water feature is present but no water is visible. What appears to be rows of structures are present south of the former lake. North Pepper Avenue which runs adjacent to the central eastern border appears paved in this photograph. High density residential development is observed approximately 600 feet northwest of the subject site.

1989

In the 1989 photograph, the airfield has been removed. The large structures at 2111 W. Valley Boulevard and 401 Pepper Avenue, as well as several smaller structures across the site, have been constructed. Wildrose Avenue, Woodpine Avenue, and Indigo Avenue have been constructed. High density residential tracts and apartment buildings are visible north of the site, beyond San Bernardino Avenue.

1995

In the 1995 photograph, the site and vicinity appear similar to that observed on the 1989 photograph. The Arrowhead Regional Medical Center is being constructed off-site to the east of the east-central portion of the site.

2002

In the 2002 photograph, the site and vicinity appears similar to that observed on the 1995 photograph. The structures, vacant areas, golf course, and former pond area that were observed during the site reconnaissance are present: the large warehouse-type structures on the western portion of the site are visible, the central portion of the subject site is occupied by a golf course, remnant of a dry lake, and undeveloped land, the southern edge of the site is occupied by structures and development, the eastern portion of the site is occupied by vacant land and commercial or light industrial land use, and the northern portion of the site appears mostly undeveloped.

The general vicinity of the area surrounding the site appears to be predominantly residential to the north and to the east. A medical center structure is visible across

North Pepper Avenue to the east of the east-central portion of the subject site. The I-10 freeway is located along the southern boundary of the site and San Bernardino Avenue is located along the northern boundary of the site.

7.5 Historical USGS Topographic Maps

Petra reviewed historical USGS topographic maps of the site and vicinity researched and provided by EDR (1901, 1954, 1967, 1973, and 1980). Copies of the maps reviewed are provided in Appendix C.

On the 1901 map, streets are shown crossing the general site area from north to south and east to west. Also, one structure is shown on the eastern portion, in the location of one of the groves areas, on the 1901map.

On the 1954 map, Morrow Field is shown crossing the western portion of the site. Groves are shown on the southwestern portion of the site. A few small individual structures are shown on the eastern edge, southwest portion, and center portion of the site. Several structures of various sizes are shown south of W. Valley Boulevard.

On the 1967 map, the golf course, Colton Recreational Lake, the larger structure at 2245 W. Valley Boulevard, and several smaller structures south of West Valley Boulevard are shown.

On the 1973 map, the structure at 2245 W. Valley Boulevard has been expanded and the number of structures south of West Valley Boulevard have increased.

On the 1980 map, the number of structures on the site have increased and Morrow Field is listed as abandoned. The Colton Recreational Lake is listed but not shown.

7.6 Environmental Liens & Activity and Use Limitations

Environmental Liens and Activity and Use Limitations (AUL) indicate restrictions on a property which may represent a recognized environmental condition for the subject site. A search for Environmental Liens and AULs was not conducted by Petra during this investigation. **This search should be conducted prior to the purchase of any of the site properties.**

7.7 Fire Insurance Maps and City Directories

Fire Insurance Maps provide information on structure locations and operations which were present at the time of the survey. These maps were completed for most major cities and metropolitan areas, dating from 1867, and provide information into past usage of buildings and how commercial and industrial zoning has changed over time. Sanborn™ Fire Insurance maps were requested for this study. EDR reports that no Sanborn™ Fire Insurance map coverage is available for the site. The memorandum documenting this inquiry is included in Appendix C.

City Directories provide information for a specific address at a specific time. The directories were searched back to 1922. Residential and commercial listings for the area start in 1941. An address locating website such as Google Map was used to determine the location of some addresses. Based on the age of these listings and new development which has taken place since the time of listings, it is difficult to determine the exact location of each listing. Since several site boundaries are marked by roads, please note that some listings mentioned below may or may not fall within the boundary of the subject site. A possible ranch, located along the eastern boundary (Hermosa Avenue) is listed in 1946. Two gas stations and a car dealership are listed in 1975 to be on the subject site, along West Valley Boulevard. A carpet and upholstery cleaning company is listed in 1990 to be located along San Bernardino

Avenue (the northern boundary). A tire company is listed to be located along Hermosa Avenue in 1991 (the eastern boundary). Three automotive body shops are listed in 2003 to be located on the subject site along Rexford Street.

7.8 Interviews

Since Petra was not granted access to the site structures, no managers or owners, were interviewed as part of this investigation.

7.9 Data Failures and Data Gaps

In the event that data gaps are identified, the Environmental Professional (EP) will endeavor to comment on the significance of those data gaps. However, the EP cannot, and does not warrant or guarantee that no significant events, releases, or conditions arose, during periods such as data gaps.

Petra reviewed several sources for historical information regarding the subject site. These sources included a government agency database search and a review of historical aerial photographs and historical USGS topographic maps. No fire insurance maps are reported to be available for the site.

Several areas of investigation had limited information which could be considered a data failure (lack of information in one particular area of historical research for the site). These areas include a reconnaissance of the facilities on the site, interviews with owners and managers of these facilities, a review of any documents at the local regulatory agencies for the site address such as the RWQCB or San Bernardino County Fire Department, and information regarding the nature of the SLIC listing for the Arrowhead Regional Medical Center. ***Due to these data failures, there is a data gap (lack of information in all areas of historical research for the site) with regards to***

confirming which sites would be considered a recognized environmental condition to the subject site.

8.0 DISCUSSION OF POTENTIAL ENVIRONMENTAL CONCERNS

The following discussions of potential environmental concerns are presented to inform the client as to the existence, or lack thereof, of recognized environmental conditions present on the subject site.

8.1 Regulatory Actions

Based upon a thorough search of available federal, state, and local records, current regulatory action pending with respect to the subject site appears to be limited to permits for various on-site activities.

8.2 Adjacent and Nearby Properties

The following two sites were identified which would indicate the presence of recognized environmental conditions adjacent to the subject site that are considered likely to pose a significant impact to soils or groundwater beneath the subject site:

- The Arrowhead Regional Medical Center, located at 400 N. Pepper Avenue, was listed on the SLIC database. No additional information was obtained during this investigation to establish why it is on this database.

- Chevron Station #9-6969, 101 Valley Boulevard (Rialto). A release which impacted groundwater was reported. Although the case received closure in 1993, no additional information was obtained during this investigation to determine the facility's potential impact to groundwater on the subject site.

It is recommended that a file review be conducted at the RWQCB and San Bernardino County Fire Department to obtain additional information regarding these facilities.

8.3 Polychlorinated Biphenyls

Both pole-mounted and pad-mounted transformers were observed on the site. It is unknown if they contain PCBs. If the transformers are to be removed, it is recommended that the removal be completed by a licensed contractor or the utility company responsible for the transformers.

While the interior of the buildings were not observed, it is likely that they contain fluorescent light fixtures which may have ballasts containing PCBs. Additionally, fluorescent light tubes contain trace amounts of mercury.

8.4 Underground Storage Tanks and Above Ground Storage Tanks

The following addresses were identified as currently or historically having UST or AST:

- 1500 W. San Bernardino Avenue, County of San Bernardino
- 791 N. Pepper Avenue, Bishop's Cental Stores / Colton Bishop Store House
- 1700 W. Valley Boulevard, California Auto Specialist/Inland Empire Toyota/Budget Truck Rental
- 1600 W. Valley Boulevard, Valero Service Station
- 1900 W. Valley Boulevard, Moss Bros. Ford
- 1988 W. Valley Boulevard, Grace WR & Co. Distribution Services/Sammon's Trucking
- 1998 W. Valley Boulevard, Colton Auto Sales/Western Exterminator Company
- 2006 W. Valley Boulevard, Brad & Carol Larsen/Sierra Diesel Repair

- 2036 W. Valley Boulevard, Oroweat Foods Co/Bimbo Bakeries USA, Inc./Bestfoods Baking Company
- 2109/2111 W. Valley Boulevard, Price Club/Telco Foods

It is recommended that these facilities be inspected. The ASTs should be inspected to confirm they are placed within secondary containment units. The most current UST fit test documents should be reviewed to confirm the USTs have not had any indications of a release.

8.5 Storm Water/Waste Water Discharge

Storm water/waste water discharge from the site appears to be limited to surface water storm runoff and human sewage. However, the site facilities should be inspected to confirm there is no other waste water discharge. It is also unknown if septic tanks were historically present on the site. If encountered during grading operations, they should be removed and disposed of in accordance with current regulations.

8.6 Pesticide and Herbicide Residues

Groves were historically located on portions of the subject site. No information was obtained regarding pesticide and herbicide use in these areas. Therefore, pesticide and herbicide residues present a potential environmental concern with regards to the subject site. Sampling of the near-surface soils should be conducted in these areas to evaluate the potential for impact from past pesticide and herbicide use.

8.7 Asbestos-Containing Materials and Lead-Based Paints

While the structures were not inspected for asbestos-containing materials and lead-based paints, it is likely that the older (pre-1980's) structures contain these materials. It is recommended that the buildings be assessed for asbestos-containing materials prior to any demolition. If present, asbestos-containing materials should be abated prior to

demolition in accordance with current regulations. The soil drip-lines of any structures should also be tested for lead-based paints.

Due to the historical presence of groves located on the site, it is possible that underground transite (asbestos-containing) irrigation pipes are present. If any transite pipes are encountered during grading, they should be removed intact and disposed of in accordance with current regulations.

8.8 Landfills

The EDR report does not list any known landfills on the subject site. Landfills identified off the site do not appear to represent a recognized environmental condition with regards to the subject site.

8.9 Waste Generation and Storage

Miscellaneous debris was observed and included plastic, metal, wood, concrete, PVC pipes, a boat, tiles, furniture, landscape waste, carpet, dry wall, brick and other building materials, over 100 tires, asphalt, car parts, household items, motor oil bottles, five-gallon containers of paint, and trash. Two 55-gallon drums were observed in the former recreation pond. They were partially buried and appeared burnt from a recent small brush fire. The contents of the drums are unknown. It is recommended that the debris on the site be removed and disposed of in accordance with current regulations. The area under the debris should be inspected for staining.

9.0 CONCLUSIONS

At the client's request, the site structures and most of the site parcels were not entered into and the site reconnaissance was completed as a "drive-by/fence-line" investigation. The conclusions discussed in this section are based on limited available information;

it is possible that a reconnaissance of the interior of the properties will change these conclusions.

9.1 General Site Information

1. The site is an irregular shaped parcel roughly bounded by San Bernardino Avenue to the north, city boundaries between Colton and Rialto to the west, by the I-10 freeway to the south, and by both Pepper Avenue and Hermosa Avenue to the east in the City of Colton, San Bernardino County, California. The subject site is comprised of approximately 353 acres. At the time of our investigation, the site consisted of vacant land, a golf course, residential homes, commercial/retail businesses, office complexes, and what appeared to be light industrial land use.

2. Based on information obtained during this investigation, the site appears to have been used for dry farming/grazing activities, possibly as early as the 1900's. Small groves were present on the southwestern, southeastern, and northeastern portions of the site in the 1930's. The southwestern grove was present until at least the mid-1950's. Morrow Field (a single runway airfield) was constructed on the subject site in 1942. The airfield was abandoned by 1980. The Colton Golf Club and the former Colton Recreational Lake were constructed on the site in the 1960's. The residential structures currently located on the northeastern portion of the site appear to have been present since at least the 1950's. In the 1960's, the far northeast corner of the site appeared to have been used for livestock corrals. Commercial-type structures began appearing on the site in the 1950's, primarily south of W. Valley Boulevard. By the late-1980's most of the structures present today had been constructed. Historical information dating back to 1901 was reviewed during this investigation.

3. Several pole-mounted and pad-mounted transformers were observed on the site. It is unknown if the transformers contain polychlorinated biphenyls (PCBs).

4. Much of the site was vacant land. Miscellaneous debris was observed and included plastic, metal, wood, concrete, PVC pipes, a boat, tiles, furniture, landscape waste, carpet, dry wall, brick and other building materials, over 100 tires, asphalt, car parts, household items, motor oil bottles, five-gallon containers of paint, and trash. Two 55-gallon drums were observed in the

former recreation pond. They were partially buried and appeared burnt from a recent small brush fire. The contents of the drums are unknown.

9.2 Recognized Environmental Conditions

Recognized environmental conditions are defined by the American Society of Testing and Materials (ASTM) as any hazardous substance or petroleum product under conditions that indicate an existing, past, or material threat of release into the structures, ground, groundwater, or surface water at the subject site. If the presence of recognized environmental conditions are identified on a subject site, it may warrant additional research, site investigation, and/or action.

The following sites have had past releases which would catagorize them as recognized environmental conditions.

- 1600 W. Valley Boulevard, Former Shell/Valero Gas Station (part of the subject site). This facility had a reported release which has received agency closure.
- 2109/2111 W. Valley Boulevard, Price Club/Telco Foods (part of the subject site). This facility had a reported release which has received agency closure.

9.3 Potential Environmental Conditions

Potential environmental conditions pertain to any hazardous substance or petroleum product under conditions that suggest the possibility of an existing, past, or material threat of release into the structures, ground, groundwater, or surface water at the subject site, but for which not enough information was available through the means within the scope of this report. The identified presence of potential environmental conditions at the subject site may warrant additional research, site investigation, and/or action. Those items identified at the subject site or nearby properties, which are potential environmental conditions relative to the subject site are discussed below.

1. Although no obvious indications of recognized environmental conditions were identified, the following addresses are considered to be likely potential environmental concerns to the site due to the nature of the business or other observations made during Petra's site reconnaissance:

   - 401 Pepper Avenue, McNeilus Truck and Manufacturing
   - 791 Pepper Avenue, Bishop Central Storehouse-LDS Church.
   - 310 Rexford Street, Transport Components Rebuilder
   - 313 Rexford Street, Republic Machine and Fabrication
   - 319 Rexford Street, 5 Star Auto Body
   - 320 Rexford Street, AMCAl Machine Shop
   - 1313 W. Valley Boulevard, City Truck Yard
   - 1630 W. Valley Boulevard, Chadwick Auto Wholesale
   - 1700 W. Valley Boulevard, I-10 Auto Sales/ Budget Car Rental
   - 1849 W. Valley Boulevard, Stevens Transport
   - 1900 W. Valley Boulevard, Moss Bros Ford
   - 2084 W. Valley Boulevard, PYP Hot Rod Shop/Ben Warner Towing
   - 2111 W. Valley Boulevard, Telco Food Products
   - Burned structures along W. Valley Boulevard (adjacent to "The Hub").

   It is recommended that these facilities be inspected to confirm that they do not have the potential to adversely impact the subject site.

2. These sites have not had a reported release; however, the following facilities appear to have USTs and /or ASTs which could represent a potential concern should they have a release.

- 1500 W. San Bernardino Avenue, County of San Bernardino
- 791 N. Pepper Avenue, Bishop's Cental Stores / Colton Bishop Store House
- 1700 W. Valley Boulevard, California Auto Specialist/Inland Empire Toyota/Budget Truck Rental
- 1600 W. Valley Boulevard, Valero Service Station
- 1900 W. Valley Boulevard, Moss Bros. Ford
- 1988 W. Valley Boulevard, Grace WR & Co. Distribution Services/ Sammon's Trucking
- 1998 W. Valley Boulevard, Colton Auto Sales/Western Exterminator Company
- 2006 W. Valley Boulevard, Brad & Carol Larsen/Sierra Diesel Repair
- 2036 W. Valley Boulevard, Oroweat Foods Co/Bimbo Bakeries USA, Inc./Bestfoods Baking Company

It is recommended that these facilities be inspected. The ASTs should be inspected to confirm they are placed within secondary containment units. The most current UST fit test documents should be reviewed to confirm the USTs have no indications of a release.

3. Based on information obtained from the agency database search, the following on-site facilities are listed as potential environmental concerns:

- 401 N Pepper Avenue, McNeilus Truck & Manufacturing Inc. Although no releases have been reported from this site, it is listed on the CA WDS database as an industrial facility.

- Moss Bros. Ford, 1900 W. Valley Boulevard. This facility reportedly has an above ground storage tank.

- County of San Bernardino, 1500 W. San Bernardino Avenue. This facility may have had either a AST or UST.

- Price Club/Telco Foods,, 2109/2111 W. Valley Boulevard. This facility had a reported release which has received agency closure. It is unknown if USTs are still present at this facility.

It is recommended that these facilities be inspected to confirm that facility activities do not have the potential to adversely impact the subject site.

4. Groves were historically located on portions of the subject site. No information was obtained regarding pesticide and herbicide use in these areas.

It is recommended that sampling of the near-surface soils should be conducted in the former grove areas to evaluate the potential for impact from past pesticide and herbicide use.

5. Based on information obtained from the agency database search, the following off-site facilities are listed as potential environmental concerns:

- Arrowhead Regional Medical Center, 400 N. Pepper Avenue. This facility was included on the SLIC database. No additional information was obtained during this investigation to establish why it is on this database.

- Chevron Station #9-6969, 101 Valley Boulevard (Rialto). This facility reportedly impacted drinking water. No additional information was obtained during this investigation to determine the facility's potential impact to groundwater on the subject site.

It is recommended that a file review be conducted at the RWQCB and San Bernardino County Fire Department to obtain additional information regarding these facilities.

9.4 Site Considerations

Items, if presented below, are not considered recognized environmental conditions in accordance with ASTM 1527-05. Although these items may warrant consideration in conjunction with any planned development activities, they are not recognized environmental conditions. The information regarding possible actions relative to these items has been provided as guidance.

1. Both pole-mounted and pad-mounted transformers were observed on the site. It is unknown if they contain polychlorinated biphenyls (PCBs).

   If the transformers are to be removed, it is recommended that the removal be completed by a licensed contractor or the utility company responsible for the transformers.

2. While the interior of the buildings were not observed, it is likely that they contain fluorescent light fixtures which may have ballasts containing PCBs. Additionally, fluorescent light tubes contain trace amounts of mercury.

   When these items are removed, they should be disposed of in accordance with current regulations.

3. Debris, including two partially buried drums, were observed on the site.

   It is recommended that the debris on the site be removed and disposed of in accordance with current regulations. The area under the debris should be reinpsected for staining.

4. While the structures were not inspected for asbestos-containing materials and lead-based paints, it is likely that the older (pre-1980's) structures contain these materials.

   It is recommended that the buildings be assessed for asbestos-containing materials prior to any demolition. If present, asbestos-containing materials should be abated prior to demolition in accordance with current regulations. The soil drip-lines of any structures should also be tested for lead-based paints.

5. Due to historical presence of groves located on the site, it is possible that underground transite (asbestos-containing) irrigation pipes are present.

If any transite pipes are encountered during grading, they should be removed intact and disposed of in accordance with current regulations.

6. It is unknown if septic tanks were historically present on the site.

If encountered during grading operations, they should be removed and disposed of in accordance with current regulations.

10.0 LIMITATIONS

This investigation is based upon the project as described and the environmental data obtained from the field reconnaissance and research performed as outlined in this report. This report has not been prepared for use by parties or projects other than those named or described in this report, additional studies may be required.

Since our investigation is based upon a review of available data and inspection of the site, without any invasive investigation, the conclusions presented herein are professional opinions. These opinions have been derived in accordance with current standards of practice, and no warranty is expressed or implied.

This firm's evaluation of previous reports and/or subconsultant reports focuses on the completeness of the information presented in the document, in accordance with applicable rules and regulations, and does not include the establishment of data sufficiency or accuracy.

11.0 QUALIFICATIONS

Resumes for the staff who contributed to this report are presented in Appendix E.

"We the undersigned declare that, to the best of our professional knowledge and belief, we meet the definition of Environmental Professional as defined in § 312.10 of 40 CFR 312. We have the specific qualification based on education, training, and experience to assess a property of the nature, history, and setting of the subject site. We have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312."

Callie L. Cullum
Project Geologist

PHASE I ESA SITE INSPECTION CHECKLIST

J.N. 149-08 **Start: Time**_____ **Miles**_____

Date: 4/30/08 **Finish: Time**_____ **Miles**_____

1. **Site Information** San Bern Ave (N), Riverside (W), I-10 (S)
   - Address: Hermosa (E), Colton, CA
   - Parcel Size: ≈ 253 acres
   - Facility Size: various
   - Map Reference: Thom. Bros. Pg 605+606
   - Owner: various

2. **Site Description**
   - Topographic Conditions: overall slope to south
   - Obvious Geologic Features: —
   - Estimated % of Site Covered by Buildings and Pavement: < 20%
   - Ground Cover: mix vegetation
   - Type and Condition of Pavement: asphalt - mod to good
   - Roads and Parking Facilities: numerous dirt + paved roads, parking lots for businesses.
   - Structures: see attached list
   - Description of Obstructions: not allowed on properties

3. **Indications of Current Site Use(s)**
   - ☐ Agriculture ☒ Industrial ? ☒ Commercial/Retail
   - ☐ Residential ☐ Undeveloped ☐ No indications of current use
   - ☒ Other: golf course, vacant land, residential

4. **Indications of Previous Site Use(s)**
   - ☐ Agriculture ☐ Industrial ☐ Commercial/Retail
   - ☐ Residential ☒ Undeveloped ☐ No indications of prior use
   - ☒ Other: pond area (Colton Res. Lake)
     No obvious signs of oil fields

PHASE I ESA SITE INSPECTION CHECKLIST

PAGE NOT APPLICABLE ☐

5. **Indications of Current Adjacent Land Use**

North: ~~vacant~~ San Bernardino Ave

South: I-10 Freeway

East: A.R.M.C., Hermosa Cemetery, self storage, Railroad tracks

West: Residential, Endangered species area, Retail

6. **Indications of Previous Adjacent Land Use**

North: _____

South: none

East: ~~Residential~~

West: _____

7. **Indications of Vicinity Adjacent Land Use**

North: Residential, Retail, Park, Water Well

South: Railroad, Industrial

East: Residential

West: Commercial, lt. industrial, Retail

8. **Potential Sensitive Receptors (Wells, Streams, Schools, etc.) and Location Relative to the Site**

several wells on & near site

PHASE I ESA SITE INSPECTION CHECKLIST

PAGE NOT APPLICABLE ☐

9. **Tanks/Containers (include tanks, drums, labeled and unlabeled containers)**

Approximate Capacity	Contents	Tank Composition	Location on Site
6 - ≥20,000gal	?	Steel?	791 Pepper
"	"	"	401 Pepper
2 - ≥10,000gal	"	"	1111 Valley
More likely to be present			

10. **Indications of USTs (fill pipes, vents, etc.)** ☐ Yes ☐ No

Unable to access properties - likely to be present. Expect Valero gas station to have them.

11. **Indications of Other Underground Structures (e.g. clarifiers, wells, dry wells, septic systems, etc.)** ☐ Yes ☐ No

Unable to access properties

12. **Indications of PCB-containing equipment or potential PCBs-containing equipment (e.g. electrical equipment, hydraulic equipment, transformers, etc.)** ☒ Yes ☐ No

Numerous pole- & pad-mounted transformers on site

PAGE NOT APPLICABLE ☐

13. **Surface Staining (appearance, location, approximate size)** ☐ Yes ☐ No

Not in areas observed

14. **Pits, Ponds, Lagoons, Pools of Liquid (description/location)** ☐ Yes ☐ No

Not in areas observed

15. **Odors** ☐ Yes ☒ No

16. **Stressed Vegetation (from something other than insufficient water)** ☐ Yes ☒ No

17. **Solid Waste/Refuse/Evidence of Dumping (description, location, approximate amount)** ☒ Yes ☐ No

Primarily in vacant areas near roads.

May contain ACMs + LBPs

PHASE I ESA SITE INSPECTION CHECKLIST

PAGE NOT APPLICABLE ☐

18. **Evidence of Hazardous Materials, Hazardous Waste, or Petroleum Products** ☒ Yes ☐ No

a few cans of paints & motor oil

19. **Public Services**

a. Potable Water Supply: City

b. Sewage Disposal System: City

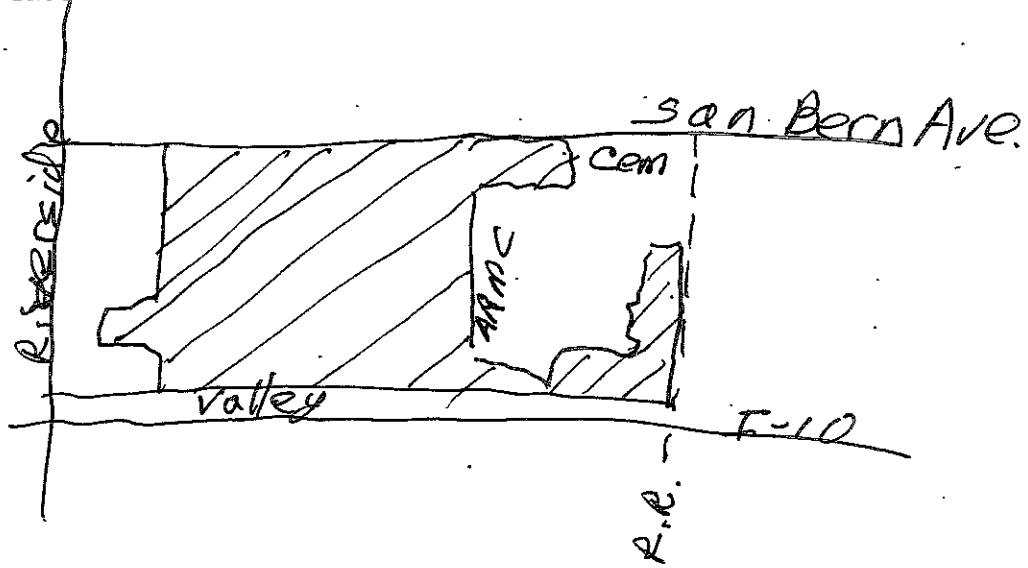
c. Storm Water Runoff: into gutters & soil

d. Waste Water: unknown

20. **Site Observations**

See attached list

21. **Site Sketch**



491 Wildrose Avenue - EJK Center
Unit A - Dannybuilt Truckmounts
Unit C - Snap-On Auto Training Academy
Unit D - M & B Cooling Specialists
Unit E - Digital Printing
Unit G - Javco Ornamental Works
Unit I - Tata Bouncers
Unit J - Rental Office
Unit M or N - Designs by Davis Furniture
front of building sign (with no specific suite number) - Sheet Metal Work

1750 San Bernardino Avenue - Carpenters Union Membership Training Center
(structure is vacant, for sale sign outside)
San Bernardino Avenue/ Pepper Avenue - Arrowhead Regional Medical Center (ARMC)
Village (portable buildings)

C Street - 625, 635, 645, 1225, 1227, 1245, 1265 all residences
1275 W. C Street - RAI Care Center

791 Pepper Avenue - Bishop Central Storehouse, LDS Church (phosphine? gas tank in back of property)
401 Pepper Avenue - McNeilus Truck & Manufacturing (MTM) (manufacturer of cement trucks?-cement truck barrels in back) (Note: large AST in back may be part of LDS property)
1099 Pepper Avenue - World Prophetic Ministry Church
(The King is Coming Auditorium, 2 pad mounted transformers)

220 Rexford - Auction Meat and Seafood
299 Rexford - vacant?
310 Rexford - Transport Components Rebuilder
313 Rexford - Republic Machine and Fabrication
319 Rexford - 5 Star Auto Body
320 Rexford - AMCAL Machine Shop (at least one hoist in back)

235 Hermosa Avenue - ? RV related business
295 Hermosa Avenue - Acacia RV Performance Center
325 Hermosa Avenue - Slover Mountain High School
345 Hermosa Avenue - residence (another 3 residences adjacent, no addresses)

2040 Woodpine Avenue - County of San Bernardino Department of Public Social Services

1205 W. Valley Boulevard - Vacation Station RV
1295 W. Valley Boulevard - Spas & Pools
1313 W. Valley Boulevard - City Truck Yard
1405 W. Valley Boulevard - Colton Music Center (Piano City)
1600 W. Valley Boulevard - Valero
1620 W. Valley Boulevard - Baker's
1630 W. Valley Boulevard - Chadwick Auto Wholesale
1700 W. Valley Boulevard - I-10 Auto Sales/ Budget Car Rental
1759 W. Valley Boulevard - Auction Meats
1763 W. Valley Boulevard - Auction Meats and Seafood
1849 W. Valley Boulevard - Stevens Transport
1900 W. Valley Boulevard - Moss Bros Ford
1901 W. Valley Boulevard - Colton Golf Club
2001 W. Valley Boulevard - Hub Cocktail
Burned area adjacent to west of the Hub, possibly former storage area???
2006 W. Valley Boulevard - Valley Truck Filters and Parts, Engine Overhaul
2010 W. Valley Boulevard - Antique Furniture Auction
2012 W. Valley Boulevard - Marques Signs
2014, 2016, 2018 W. Valley Boulevard - residences
2036 W. Valley Boulevard - Oroweat/Entenmann's Bakery Outlet
2042 W. Valley Boulevard - Rodeway Motel
2048 W. Valley Boulevard - Landjet Motor Carriers
2084 W. Valley Boulevard - PYP Hot Rod Shop, Hot Rod and Race Car Fabrication, Shoes, Ben Warner Towing, Well 18A
2111 W. Valley Boulevard - Bakery (Telco Foods), ASTs, pad mounted transformers, ammonia
2245 W. Valley Boulevard - Contractor's Warehouse

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-05) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

EXECUTIVE SUMMARY

FEDERAL RECORDS

CERC-NFRAP: Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

A review of the CERC-NFRAP list, as provided by EDR, and dated 12/03/2007 has revealed that there is 1 CERC-NFRAP site within approximately 1.25 miles of the target property.

Lower Elevation	Address	Dist / Dir	Map ID	Page
GATX RAIL	*20878 SLOVER STREET*	*1/2 - 1 S*	*Z108*	*103*

CORRACTS: CORRACTS is a list of handlers with RCRA Corrective Action Activity. This report shows which nationally-defined corrective action core events have occurred for every handler that has had corrective action activity.

A review of the CORRACTS list, as provided by EDR, and dated 12/12/2007 has revealed that there are 2 CORRACTS sites within approximately 1.75 miles of the target property.

FILTER RECYCLING SERVICES INC	*180 W MONTE AVE*	*1 - 2 SW*	*AM173*	*220*

RCRA-TSDF: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

A review of the RCRA-TSDF list, as provided by EDR, and dated 09/11/2007 has revealed that there is 1 RCRA-TSDF site within approximately 1.25 miles of the target property.

Lower Elevation	Address	Dist / Dir	Map ID	Page
GATX RAIL	*20878 SLOVER STREET*	*1/2 - 1 S*	*Z108*	*103*

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 09/11/2007 has revealed that there are 3 RCRA-LQG sites within approximately 1 mile of the target property.

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 09/11/2007 has revealed that there are 12 RCRA-SQG sites within approximately 1 mile of the target property.

RCRA-NonGen: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA-NonGen list, as provided by EDR, and dated 09/11/2007 has revealed that there is 1 RCRA-NonGen site within approximately 0.75 miles of the target property.

TRIS: The Toxic Chemical Release Inventory System identifies facilities that release toxic chemicals to the air, water, and land in reportable quantities under SARA Title III, Section 313. The source of this database is the U.S. EPA.

A review of the TRIS list, as provided by EDR, and dated 12/31/2005 has revealed that there is 1 TRIS site within approximately 0.75 miles of the target property.

HIST FTTS: A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

A review of the HIST FTTS list, as provided by EDR, and dated 10/19/2006 has revealed that there is 1

EXECUTIVE SUMMARY

HAZNET: The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000-1,000,000 annually, representing approximately 350,000-500,000 shipments. Data from non-California manifests & continuation sheets are not included at the present time. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, & disposal method. The source is the Department of Toxic Substance Control is the agency

A review of the HAZNET list, as provided by EDR, and dated 12/31/2006 has revealed that there are 49

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the ENVIROSTOR list, as provided by EDR, and dated 11/27/2007 has revealed that there is 1 ENVIROSTOR site within approximately 1.75 miles of the target property.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and its Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also

ALLIANCE COLTON - DREWS SUBSTATION (Continued) **1005692353**

has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

California - Hazardous Waste Tracking System - Datamart

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Hazardous Waste Summary:

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D018
Waste name: BENZENE

Violation Status: No violations found

California - Hazardous Waste Tracking System - Datamart

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Hazardous Waste Summary:

Waste code:	D000
Waste name:	Not Defined

WORLD PROPHETIC MINISTRY (Continued) **1001967567**

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D018
Waste name: BENZENE

Waste code: D039
Waste name: TETRACHLOROETHYLENE

Waste code: D040
Waste name: TRICHLOROETHYLENE

Violation Status: No violations found

California - Hazardous Waste Tracking System - Datamart

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

California - Hazardous Waste Tracking System - Datamart

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and its Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Hazardous Waste Summary:
Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Waste code: D018
Waste name: BENZENE

Waste code: D035
Waste name: METHYL ETHYL KETONE

WMUDS/SWAT:

Edit Date:	Not reported
Complexity:	Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.
Primary Waste:	Washwater Waste (Product washwater wastes: E.G., photo reuse wastewater, vegetable washwater)
Primary Waste Type:	Designated/Influent or Solid Wastes that pose a significant threat to water quality because of their high concentrations (E.G., BOD, Hardness, TRF, Chloride). 'Manageable' hazardous wastes (E.G., inorganic salts and heavy metals) are included in this category.
Secondary Waste:	Not reported
Secondary Waste Type:	Not reported
Base Meridian:	Not reported
NPID:	Not reported
Tonnage:	0
Regional Board ID:	Not reported
Municipal Solid Waste:	False
Superorder:	False
Open To Public:	False
Waste List:	False
Agency Type:	Private
Agency Name:	GATX RAIL CORPORATION
Agency Department:	Not reported
Agency Address:	PO BOX 590
Agency City,St,Zip:	COLTON CA 923240266
Agency Contact:	DANNY CONTRERAS

BRINE FAC,COLTON (Continued) **S103443302**

Resource Conservation Recovery Act:	False
Department of Defence:	False
Solid Waste Assessment Test Program:	Not reported
Threat to Water Quality:	Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Sub Chapter 15:	True
Regional Board Project Officer:	KDP
Number of WMUDS at Facility:	1
Section Range:	Not reported
RCRA Facility:	No
Waste Discharge Requirements:	Active - Any facility with a continuous or seasonal discharge that is under Waste Discharge Requirements.
Self-Monitoring Rept. Frequency:	Bimonthly (Every two months)
Waste Discharge System ID:	8 362016002
Solid Waste Information ID:	Not reported

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the

CALNEV PIPE LINE COMPANY COLTON TERMINAL (Continued) **1000314453**

estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

California - Hazardous Waste Tracking System - Datamart

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Hazardous Waste Summary:
Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D018
Waste name: BENZENE

Biennial Reports:

Last Biennial Reporting Year: 2005

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Off-site waste receiver: Commercial status unknown

Hazardous Waste Summary:
Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D018
Waste name: BENZENE

Violation Status: No violations found

California - Hazardous Waste Tracking System - Datamart

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Off-site waste receiver:	Commercial status unknown

Hazardous Waste Summary:

Waste code:	D000
Waste name:	Not Defined
Waste code:	D001
Waste name:	IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.
Waste code:	D018
Waste name:	BENZENE
Violation Status:	No violations found

California - Hazardous Waste Tracking System - Datamart

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

CA WDS:
Facility ID: Santa Ana River 36I006067
Facility Type: Industrial - Facility that treats and/or disposes of liquid or semisolid wastes from any servicing, producing, manufacturing or processing operation of whatever nature, including mining, gravel washing, geothermal operations, air conditioning, ship building and repairing, oil production, storage and disposal operations, water pumping.
Facility Status: Active - Any facility with a continuous or seasonal discharge that is under Waste Discharge Requirements.
NPDES Number: CAS000001 The 1st 2 characters designate the state. The remaining 7 are assigned by the Regional Board
Subregion: 8
Facility Telephone: Not reported
Facility Contact: HENRY JOHNSON
Agency Name: TOSCO CORPORATION
Agency Address: PO BOX 2628
Agency City,St,Zip: SANTA FE SPRINGS 90670
Agency Contact: HENRY JOHNSON
Agency Telephone: Not reported
Agency Type: Private
SIC Code: 9999
SIC Code 2: Not reported
Primary Waste: Stormwater Runoff
Primary Waste Type: Designated/Influent or Solid Wastes that pose a significant threat to water quality because of their high concentrations (E.G., BOD, Hardness, TRF, Chloride). 'Manageable' hazardous wastes (E.G., inorganic salts and heavy metals) are included in this category.
Secondary Waste: Not reported
Secondary Waste Type: Not reported
Design Flow: 0

COLTON TERMINAL (Continued) **U001575531**

Baseline Flow: 0
Reclamation: No reclamation requirements associated with this facility.
POTW: The facility is not a POTW.
Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Hazardous Waste Summary:
Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D008
Waste name: LEAD

Waste code: D018

California - Hazardous Waste Tracking System - Datamart

NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

UORS (California - Used Oil Recycling System). California Integrated Waste Management Board (CIWMB) helps communities establish and promote convenient collection opportunities for used oil and used oil filters.

WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Waste code: D007
Waste name: CHROMIUM

Waste code: D008
Waste name: LEAD

Waste code: D039
Waste name: TETRACHLOROETHYLENE

Waste code: F001
Waste name: THE FOLLOWING SPENT HALOGENATED SOLVENTS USED IN DEGREASING: TETRACHLOROETHYLENE, TRICHLOROETHYLENE, METHYLENE CHLORIDE, 1,1,1-TRICHLOROETHANE, CARBON TETRACHLORIDE, AND CHLORINATED FLUOROCARBONS; ALL SPENT SOLVENT MIXTURES/BLENDS USED IN DEGREASING CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F002, F004, AND F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste code: F003
Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NON-HALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS, AND, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste code: F005
Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be

FILTER RECYCLING SERVICES INC (Continued) **1000473043**

considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.

Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

FEDERAL RECORDS

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Date of Government Version: 10/02/2007
Date Data Arrived at EDR: 12/03/2007
Date Made Active in Reports: 12/28/2007
Number of Days to Update: 25

Source: EPA
Telephone: N/A
Last EDR Contact: 01/28/2008
Next Scheduled EDR Contact: 04/28/2008
Data Release Frequency: Quarterly

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 10/02/2007
Date Data Arrived at EDR: 12/03/2007
Date Made Active in Reports: 12/28/2007

Next Scheduled EDR Contact: 04/28/2008
Data Release Frequency: Quarterly

DELISTED NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 10/02/2007

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Date of Government Version: 10/15/1991
Date Data Arrived at EDR: 02/02/1994
Date Made Active in Reports: 03/30/1994
Number of Days to Update: 56

Source: EPA
Telephone: 202-564-4267
Last EDR Contact: 02/19/2008
Next Scheduled EDR Contact: 05/19/2008
Data Release Frequency: No Update Planned

CERCLIS: Comprehensive Environmental Response, Compensation, and Liability Information System

CERCLIS contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

Date of Government Version: 01/09/2008
Date Data Arrived at EDR: 02/05/2008
Date Made Active in Reports: 02/20/2008
Number of Days to Update: 15

Source: EPA
Telephone: 703-412-9810
Last EDR Contact: 02/05/2008
Next Scheduled EDR Contact: 03/17/2008
Data Release Frequency: Quarterly

CERCLIS-NFRAP: CERCLIS No Further Remedial Action Planned

Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

Date of Government Version: 12/03/2007
Date Data Arrived at EDR: 12/06/2007
Date Made Active in Reports: 02/20/2008
Number of Days to Update: 76

Source: EPA
Telephone: 703-412-9810
Last EDR Contact: 12/06/2007
Next Scheduled EDR Contact: 03/17/2008
Data Release Frequency: Quarterly

LIENS 2: CERCLA Lien Information

A Federal CERCLA ('Superfund') lien can exist by operation of law at any site or property at which EPA has spent Superfund monies. These monies are spent to investigate and address releases and threatened releases of contamination. CERCLIS provides information as to the identity of these sites and properties.

Date of Government Version: 12/09/2007
Date Data Arrived at EDR: 01/07/2008

RCRA-TSDF: RCRA - Transporters, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Date of Government Version: 09/11/2007
Date Data Arrived at EDR: 12/03/2007

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

Date of Government Version: 09/11/2007
Date Data Arrived at EDR: 12/03/2007
Date Made Active in Reports: 12/28/2007
Number of Days to Update: 25

Source: Environmental Protection Agency

Next Scheduled EDR Contact: 05/19/2008
Data Release Frequency: Quarterly

RCRA-SQG: RCRA - Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

Date of Government Version: 09/11/2007
Date Data Arrived at EDR: 12/03/2007
Date Made Active in Reports: 12/28/2007

Telephone: (415) 495-8895
Last EDR Contact: 03/06/2008
Next Scheduled EDR Contact: 05/19/2008
Data Release Frequency: Quarterly

RCRA-CESQG: RCRA - Conditionally Exempt Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

Date of Government Version: 09/11/2007
Date Data Arrived at EDR: 12/03/2007
Date Made Active in Reports: 12/28/2007
Number of Days to Update: 25

Source: Environmental Protection Agency
Telephone: (415) 495-8895
Last EDR Contact: 03/06/2008
Next Scheduled EDR Contact: 05/19/2008
Data Release Frequency: Varies

RCRA-NonGen: RCRA - Non Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

Date of Government Version: 09/11/2007

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

US ENG CONTROLS: Engineering Controls Sites List

A listing of sites with engineering controls in place. Engineering controls include various forms of caps, building foundations, liners, and treatment methods to create pathway elimination for regulated substances to enter environmental media or effect human health.

Date of Government Version: 07/16/2007
Date Data Arrived at EDR: 08/03/2007
Date Made Active in Reports: 10/11/2007
Number of Days to Update: 69

Source: Environmental Protection Agency
Telephone: 703-603-8905
Last EDR Contact: 01/02/2008
Next Scheduled EDR Contact: 03/31/2008
Data Release Frequency: Varies

US INST CONTROL: Sites with Institutional Controls

A listing of sites with institutional controls in place. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions are generally required as part of the institutional controls.

Date of Government Version: 07/16/2007
Date Data Arrived at EDR: 08/03/2007
Date Made Active in Reports: 10/11/2007

Last EDR Contact: 02/27/2008
Next Scheduled EDR Contact: 05/26/2008
Data Release Frequency: Varies

CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

Date of Government Version: 09/01/2007
Date Data Arrived at EDR: 12/03/2007
Date Made Active in Reports: 12/28/2007

Next Scheduled EDR Contact: 03/24/2008
Data Release Frequency: Quarterly

US BROWNFIELDS: A Listing of Brownfields Sites

Included in the listing are brownfields properties addresses by Cooperative Agreement Recipients and brownfields properties addressed by Targeted Brownfields Assessments. Targeted Brownfields Assessments-EPA's Targeted Brownfields Assessments (TBA) program is designed to help states, tribes, and municipalities--especially those without EPA Brownfields Assessment Demonstration Pilots--minimize the uncertainties of contamination often associated with brownfields. Under the TBA program, EPA provides funding and/or technical assistance for environmental assessments at brownfields sites throughout the country. Targeted Brownfields Assessments supplement and work with other efforts under EPA's Brownfields Initiative to promote cleanup and redevelopment of brownfields. Cooperative Agreement Recipients-States, political subdivisions, territories, and Indian tribes become Brownfields Cleanup Revolving Loan Fund (BCRLF) cooperative agreement recipients when they enter into BCRLF cooperative agreements with the U.S. EPA. EPA selects BCRLF cooperative agreement recipients based on a proposal and application process. BCRLF cooperative agreement recipients must use EPA funds provided through BCRLF cooperative agreement for specified brownfields-related cleanup activities.

Date of Government Version: 01/03/2008
Date Data Arrived at EDR: 01/17/2008
Date Made Active in Reports: 02/20/2008

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

LUST: Geotracker's Leaking Underground Fuel Tank Report
Leaking Underground Storage Tank Incident Reports. LUST records contain an inventory of reported leaking underground storage tank incidents. Not all states maintain these records, and the information stored varies by state. For more information on a particular leaking underground storage tank sites, please contact the appropriate regulatory agency.

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method.

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

EDR PROPRIETARY RECORDS

Manufactured Gas Plants: EDR Proprietary Manufactured Gas Plants
The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

EDR Historical Auto Stations: EDR Proprietary Historic Gas Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data
Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Oil/Gas Pipelines: This data was obtained by EDR from the USGS in 1994. It is referred to by USGS as GeoData Digital Line Graphs from 1:100,000-Scale Maps. It was extracted from the transportation category including some oil, but primarily gas pipelines.

Electric Power Transmission Line Data
Source: PennWell Corporation
Telephone: (800) 823-6277
This map includes information copyrighted by PennWell Corporation. This information is provided on a best effort basis and PennWell Corporation does not guarantee its accuracy nor warrant its fitness for any particular purpose. Such information has been reprinted with the permission of PennWell.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:
Source: American Hospital Association, Inc.
Telephone: 312-280-5991
The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing
Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000
A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes
Source: National Institutes of Health
Telephone: 301-594-6248
Information on Medicare and Medicaid certified nursing homes in the United States.

Public Schools
Source: National Center for Education Statistics
Telephone: 202-502-7300
The National Center for Education Statistics' primary database on elementary and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states.

Private Schools
Source: National Center for Education Statistics
Telephone: 202-502-7300
The National Center for Education Statistics' primary database on private school locations in the United States.

Daycare Centers: Licensed Facilities
Source: Department of Social Services
Telephone: 916-657-4041

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 1999 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002 and 2005 from the U.S. Fish and Wildlife Service.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Scanned Digital USGS 7.5' Topographic Map (DRG)

Source: United States Geologic Survey

A digital raster graphic (DRG) is a scanned image of a U.S. Geological Survey topographic map. The map images are made by scanning published paper maps on high-resolution scanners. The raster image is georeferenced and fit to the Universal Transverse Mercator (UTM) projection.

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

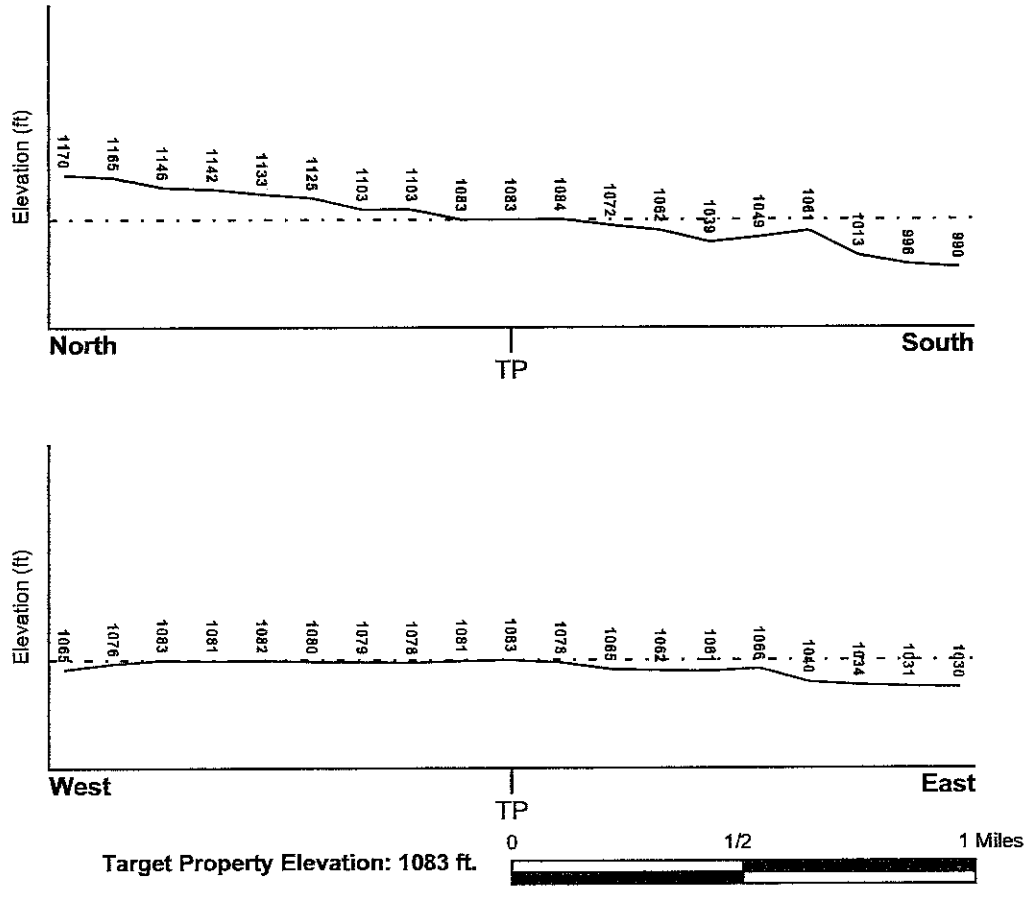
TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General SE

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES



Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
NOT AVAILABLE	Not Available

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Location Relative to TP:	1 - 2 Miles NE
Site Name:	Crane Co
Site EPA ID Number:	CAD066135690
Groundwater Flow Direction:	Southeast
Measured Depth to Water:	130 feet.
Hydraulic Connection:	A hydraulic connection exists between the aquifers underlying the site.
Sole Source Aquifer:	No information about a sole source aquifer is available
Data Quality:	Information based on site-specific subsurface investigations is documented in the CERCLIS investigation report(s)

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW
18	1/2 - 1 Mile WSW	SE

For additional site information, refer to Physical Setting Source Map Findings.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: DELHI

Soil Surface Texture: fine sand

Hydrologic Group: Class A - High infiltration rates. Soils are deep, well drained to excessively drained sands and gravels.

Soil Drainage Class: Somewhat excessive. Soils have high hydraulic conductivity and low water holding capacity. Depth to water table is more than 6 feet.

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: MODERATE

Depth to Bedrock Min: > 0 inches

Depth to Bedrock Max: > 0 inches

Soil Layer Information

	Boundary			Classification			
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil	Permeability Rate (in/hr)	Soil Reaction (pH)
1	0 inches	18 inches	fine sand	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 20.00 Min: 6.00	Max: 7.30 Min: 5.60
2	18 inches	60 inches	sand	Granular materials (35 pct. or less passing No. 200), Fine Sand.	COARSE-GRAINED SOILS, Sands, Clean Sands, Poorly graded sand. COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 20.00 Min: 6.00	Max: 7.80 Min: 6.10

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Scanned Digital USGS 7.5' Topographic Map (DRG)
Source: United States Geologic Survey
A digital raster graphic (DRG) is a scanned image of a U.S. Geological Survey topographic map. The map images are made by scanning published paper maps on high-resolution scanners. The raster image is georeferenced and fit to the Universal Transverse Mercator (UTM) projection.

HYDROLOGIC INFORMATION

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 1999 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002 and 2005 from the U.S. Fish and Wildlife Service.

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Services
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Services (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Services, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)
This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

STATE RECORDS

Water Well Database
Source: Department of Water Resources
Telephone: 916-651-9648

California Drinking Water Quality Database
Source: Department of Health Services
Telephone: 916-324-2319
The database includes all drinking water compliance and special studies monitoring for the state of California since 1984. It consists of over 3,200,000 individual analyses along with well and water system information.

OTHER STATE DATABASE INFORMATION

California Oil and Gas Well Locations
Source: Department of Conservation
Telephone: 916-323-1779

RADON

State Database: CA Radon
Source: Department of Health Services
Telephone: 916-324-2208
Radon Database for California

Area Radon Information
Source: USGS
Telephone: 703-356-4020
The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

EPA Radon Zones
Source: EPA
Telephone: 703-356-4020
Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.

OTHER

Airport Landing Facilities: Private and public use landing facilities
Source: Federal Aviation Administration, 800-457-6656

Epicenters: World earthquake epicenters, Richter 5 or greater
Source: Department of Commerce, National Oceanic and Atmospheric Administration

California Earthquake Fault Lines: The fault lines displayed on EDR's Topographic map are digitized quaternary fault lines, prepared in 1975 by the United State Geological Survey. Additional information (also from 1975) regarding activity at specific fault lines comes from California's Preliminary Fault Activity Map prepared by the California Division of Mines and Geology.

EDR Site Report™

EDR® Environmental Data Resources Inc

440 Wheelers Farms Road
Milford, CT 06461
Toll Free: 800.352.0050
www.edrnet.com

TABLE OF CONTENTS

The EDR-Site Report™ is a comprehensive presentation of government filings on a facility identified in a search of over 4 million government records from more than 600 federal, state and local environmental databases. The report is divided into three sections:

Section 1: Facility Summary ..... **Page 3**

Summary of facility filings including a review of the following areas: waste management, waste disposal, multi-media issues, and Superfund liability.

Section 2: Facility Detail Reports ..... **Page 4**

All available detailed information from databases where sites are identified.

Section 3: Databases Searched and Update Information. ..... **Page 6**

Name, source, update dates, contact phone number and description of each of the databases searched for this report.

Thank you for your business.
Please contact EDR at 1-800-352-0050
with any questions or comments.

TABLE OF CONTENTS

The EDR-Site Report™ is a comprehensive presentation of government filings on a facility identified in a search of over 4 million government records from more than 600 federal, state and local environmental databases. The report is divided into three sections:

Section 1: Facility Summary ..... **Page 3**

Summary of facility filings including a review of the following areas: waste management, waste disposal, multi-media issues, and Superfund liability.

Section 2: Facility Detail Reports ..... **Page 4**

All available detailed information from databases where sites are identified.

Section 3: Databases Searched and Update Information. ..... **Page 6**

Name, source, update dates, contact phone number and description of each of the databases searched for this report.

Thank you for your business.

EDR Site Report™

EDR® Environmental Data Resources Inc

440 Wheelers Farms Road
Milford, CT 06461
Toll Free: 800.352.0050
www.edrnet.com

TABLE OF CONTENTS

The EDR-Site Report™ is a comprehensive presentation of government filings on a facility identified in a search of over 4 million government records from more than 600 federal, state and local environmental databases. The report is divided into three sections:

Section 1: Facility Summary ..... **Page 3**

Summary of facility filings including a review of the following areas: waste management, waste disposal, multi-media issues, and Superfund liability.

Section 2: Facility Detail Reports ..... **Page 4**

All available detailed information from databases where sites are identified.

Section 3: Databases Searched and Update Information. ..... **Page 5**

Name, source, update dates, contact phone number and description of each of the databases searched for this report.

Thank you for your business.
Please contact EDR at 1-800-352-0050
with any questions or comments.

SUBJECT: UNDERGROUND STORAGE TANK (UST) CASE CLOSURE FOR ORANGE SHELL, 1600 W. VALLEY BLVD., COLTON, CA UNAUTHORIZED RELEASE REPORT DATED 3/20/03

This letter confirms the completion of site investigation and corrective action for the underground storage tank(s) located at the above-described location. Thank you for your cooperation throughout this investigation. Your willingness and promptness in responding to our inquiries concerning the former underground storage tank(s) are greatly appreciated.

Based on information in the above-referenced file and with the provision that the information provided to this agency was accurate and representative of site conditions, this agency finds that the site investigation and corrective action carried out at your underground storage tank(s) site is in compliance with requirements of subdivisions (a) and (b) of Section 25299.37 of the Health and Safety Code and with corrective action regulations adopted pursuant to Section 25299.77 of the Health and Safety Code and that no further action related to the petroleum release(s) at the site is required.

This notice is issued pursuant to subdivision (h) of Section 25299.37 of the Health and Safety Code. Please contact Lisa Holst of our office at (909) 386-8419 if you have any questions regarding this matter.

Sincerely,

Peter Brierty

Maximum Documented Contaminant Concentrations ------ Before and After Cleanup

Contaminant	Soil (ppm)		Water (ppm)		Contaminant	Soil (ppm)		Water (ppm)	
	Before	After	Before	After		Before	After	Before	After
TPH (Gas)	3.0				Xylene	0.02			
TPH (Diesel)					Ethylbenzene	ND			
Benzene	ND				Oil & Grease				
Toluene	ND				Heavy Metals				
Other (TBA)	2.9				MTBE	5.0			

Comments (Depth of Remediation, etc.):
In March 2003 a phase II environmental site assessment identified petroleum contaminated soil in the area of the UST's and dispenser islands (data shown in the "Before" column). In July 2003 the analytical results of soil samples collected from beneath the dispenser islands during UST system upgrade activity reported 110 ug/kg TBA at sample DI-d4. Impacted soil was removed from beneath the northeast dispenser island to approximately 5 feet bgs. The analytical results of one confirmation sample reported non-detectable concentrations. The installation (see section VII)

IV. Closure

Does completed corrective action protect existing beneficial uses per the Regional Board Basin Plan? ☒Yes ☐No

Does completed corrective action protect potential beneficial uses per the Regional Board Basin Plan? ☒Yes ☐No

Does corrective action protect public health for current land use? ☒Yes ☐No

CASE CLOSURE SUMMARY
Leaking Underground Storage Tank Program

Orange Shell Station, 1600 W. Valley Blvd., Colton, CA LOP Site # 2003014 SBCFD FAX (909) 386-8460

Site Management requirements: None

Should corrective action be reviewed if land use changes? ☐Yes ☒No

Monitoring wells decommissioned: ☐Yes ☐No (4 SVE wells will be abandoned prior to case closure) | Number Decommissioned: | Number retained:

List enforcement actions taken: Notice of Requirement to Reimburse

List enforcement actions rescinded: NONE

V. Local Agency Representative Data

Name: Peter S. Brierty Title: Fire Marshal

Signature: Peter S Brierty

VI. RWQCB Notification

Date Submitted to RB: RB Response: Concurs w/ Closure

RWQCB Staff Name: Ken Williams, C.E.G. Title: Senior Engineering Geologist Date: 4/1/05

Kenneth R. Williams Chief, UST Section

VII. Additional Comments, Data, etc.

of 9 soil borings and 4 SVE wells sufficiently defined the vertical and horizontal extent of contamination. Initial 8 hour SVE testing removed 0.4 lbs of MTBE and 0.5 lbs of TPH-g. Four weeks of extended SVE testing removed only 0.16 lbs of MTBE and 0.57 lbs of TPH-g. Vapor sample results at the end of the test were low to non-detect. Extended SVE testing demonstrates that minimal extractable mass is present in the vadose zone. The Department recommends case closure for the following reasons: 1) The vertical and lateral extent of contamination is sufficiently defined. 2) Groundwater was not encountered at the deepest depth drilled (136') and is expected to occur between 150 feet to 200 feet bgs. 3) A minimum of 60 feet of clean soil is present between deepest identified contamination (90' bgs) and groundwater. 4) The nearest supply wells are reported to be approximately 1500 feet northeast (upgradient) and 2000 feet south (downgradient) of the site. 5) The residual mass of petroleum hydrocarbons in the soil does not pose a threat to human health, the environment, or to groundwater resources.

This document and the related CASE CLOSURE LETTER shall be retained by the lead agency as part of the official site file.

REMEDIAL ACTION COMPLETION CERTIFICATION

JUL 3 0 2007

TELCO FOOD PRODUCTS **SITE #2006010**
2111 W. VALLEY BOULEVARD
COLTON, CA 92324

ATTENTION: FRANK LOWRIE

SUBJECT: UNDERGROUND STORAGE TANK (UST) CASE CLOSURE FOR TELCO FOOD PRODUCTS, 2111 W. VALLEY BLVD., COLTON UNAUTHORIZED RELEASE REPORT DATED: 11/21/06

This letter confirms the completion of site investigation and corrective action for the underground storage tank(s) formerly located at the above-described location. Thank you for your cooperation throughout this investigation. Your willingness and promptness in responding to our inquiries concerning the former underground storage tank(s) are greatly appreciated.

Based on information in the above-referenced file and with the provision that the information provided to this agency was accurate and representative of site conditions, this agency finds that the site investigation and corrective action carried out at your underground storage tank(s) site is in compliance with requirements of subdivisions (a) and (b) of Section 25296.10 of the Health and Safety Code and with corrective action regulations adopted pursuant to Section 25299.3 of the Health and Safety Code and that no further action related to the petroleum release(s) at the site is required..

This notice is issued pursuant to subdivision (h) of Section 25296.10 of the Health and Safety Code. Please contact Jackson Crutsinger of our office at (909) 386-8419 if you have any questions regarding this matter.

Sincerely,

Peter Brierty

Responsible Parties	Address	Phone Numbers
Telco Food Products Attn: Frank Lowrie	2111 W. Valley Boulevard Colton, CA 92324	(909) 825-7343

Tank No.	Size in Gallons	Contents	Closed in Place/ Removed?	Date
1	20,000	gasoline	removed	4/30/97
2	20,000	gasoline	removed	4/30/97
3	20,000	gasoline	removed	4/30/97
4				

III. Release and Site Characterization Information

Cause and type of release:
unknown

Site characterization complete? ☒Yes ☐No	Date approved by oversight agency: 12/29/06		
Monitoring wells installed? ☐Yes ☒No	Number: NA	Proper screened interval? ☐Yes ☐No	
Highest groundwater depth below ground surface: 175 ft	Lowest depth: 200 ft	Flow direction: NA	
Most sensitive current use: domestic			
Are drinking water wells affected? ☐Yes ☒No	Aquifer Name: Colton - Rialto subarea		

CASE CLOSURE SUMMARY
Leaking Underground Storage Tank Program

III. Release and Site Characterization Information (continued)

Is surface water affected? ☐Yes ☒No	Nearest/affected surface water name: NA
Off-site beneficial use impacts (addresses/locations): none	
Report(s) on file? ☐Yes ☐No	Where is report filed? San Bernardino County Fire Dept Hazardous Materials Division

Treatment and Disposal of Affected Material

Material	Amount (Include Units)	Action (Treatment or Disposal w/Desination)	Date
Tank	3	to be recertified for re-use	4/30/97
Piping			
Free Product			
Soil			
Ground Water			
Barrels			

Maximum Documented Contaminant Concentrations ——— Before and After Cleanup

Contaminant	Soil (ppm)		Water (ppm)		Contaminant	Soil (ppm)		Water (ppm)	
	Before	After	Before	After		Before	After	Before	After
TPH (Gas)	5	12			Xylene	ND	ND		
TPH (Diesel)	-				Ethylbenzene	ND	ND		
Benzene	ND	ND			Oil & Grease				
Toluene	ND	ND			Heavy Metals	ND	ND		
Other					MTBE	1.5	ND		

Comments (Depth of Remediation, etc.):
The highest "Before" concentrations of MTBE were found at the north end of Tank 1 at 17 ft. depth. A site investigation consisted of 3 borings to a maximum depth of 72 ft. The USTs were removed in 1997, but because the sample results were not received by the County, no closure letter was ever issued. The results of the current, 2006 site investigation were all NDs except for 12 ppm TRPH at 17 ft. depth, the location where MTBE was indicated in the tank removal samples. No remediation was done at this site.

IV. Closure

Does completed corrective action protect existing beneficial uses per the Regional Board Basin Plan? ☒Yes ☐No

Does completed corrective action protect potential beneficial uses per the Regional Board Basin Plan? ☒Yes ☐No

Does corrective action protect public health for current land use? ☒Yes ☐No

CASE CLOSURE SUMMARY
Leaking Underground Storage Tank Program

Telco Food Products, 2111 W. Valley Blvd., Colton LOP# 2006010 FAX (909) 386-8460

Site Management requirements: none

Should corrective action be reviewed if land use changes? ☐Yes ☒No

Monitoring wells decommissioned: ☐Yes ☒No	Number Decommissioned: NA	Number retained: NA

List enforcement actions taken: Notice of Requirement to Reimburse

V. Local Agency Representative Data

Name: Peter S. Brierty Title: Division Chief

Signature: Peter Brierty Date: 3/15/07

VI. RWQCB Notification

Date Submitted to RB: RB Response: Concurs w/ Closure

RWQCB Staff Name: Ken Williams Title: Senior Geologist Date: 3/26/07

Signature: Kenneth R. Williams Chief, UST Section

VII. Additional Comments, Data, etc.

Justification for closure:

well defined contaminant plume,

highly localized contaminant,

very low residual concentrations,

groundwater depth of approximately 200 ft. with large ND buffer.

This document and the related CASE CLOSURE LETTER shall be retained by the lead agency as part of the official site file.

1.0 Introduction

This report presents the results of groundwater monitoring and sampling activities conducted during the Third Quarter 2007 for the Calnev Pipeline Company, L.L.C. (Calnev) Colton Terminal (the Terminal). Calnev is an operating partner of Kinder Morgan Energy Partners, L.P. (KMEP). The Terminal is located at 2051 East Slover Avenue in Bloomington, California (Figure 1-1). This quarterly monitoring report was prepared in response to a directive issued by the California Regional Water Quality Control Board (RWQCB), Santa Ana Region.

The Terminal is operated by Calnev, an operating partner of KMEP, and serves as a terminal for the storage and distribution of gasoline, diesel, and jet fuel. The Terminal includes fuel storage tanks, several small buildings, and numerous buried and aboveground pipelines and other utilities. The Terminal is bounded on the south by Slover Avenue, on the west by Sycamore Avenue, and on the north and east by undeveloped property. The Colton Fuel Terminal is located southwest of the Calnev facility.

1.1 Objectives

The objectives of the groundwater monitoring program are to characterize the groundwater flow conditions and the lateral and vertical extent of light nonaqueous phase liquid (LNAPL) and dissolved-phase hydrocarbons in groundwater at the Terminal.

1.2 Groundwater Monitoring Activities

Groundwater monitoring at the Terminal includes quarterly sampling, gauging of groundwater levels, and measurement of LNAPL accumulations in onsite and offsite monitoring wells. TRC, Inc. performed groundwater monitoring activities on behalf of KMEP.

Groundwater samples collected from the monitoring wells were submitted to Alpha Analytical, Inc., of Sparks, Nevada, for the following analyses:

- Total petroleum hydrocarbons quantified as gasoline (TPH-g) and total petroleum hydrocarbons quantified as diesel (TPH-d) using U.S. Environmental Protection Agency (EPA) Method 8015 modified.
- Ethanol and methanol using EPA Method 8015 modified.
- Volatile organic compounds (VOCs) including methyl tertiary butyl ether (MTBE) and other fuel oxygenates using EPA Method 8260B-Full-Scan.

2.0 Background

This section presents background information for the Terminal, including descriptions of the physical setting, climate, local hydrogeology, and monitoring well network.

2.1 Physical Setting

The Terminal is located within the Riverside Basin in the eastern portion of the Upper Santa Ana River Valley (Figure 1-1). Approximate elevations in the area range from 1,037 to 1,045 feet above mean sea level (msl), with the topography sloping to the southeast. The Santa Ana River is located approximately 1 mile southeast of the Terminal. The partially lined Rialto Flood Control Channel traverses the Colton Fuel Terminal southwest of the Calnev Terminal.

2.2 Climate

The total annual precipitation in the vicinity of the Terminal averaged approximately 16.30 inches for the period of record between 1905 and 2005 based on data from the precipitation stations located closest to the Terminal (i.e., the San Bernardino Medical and San Bernardino County Yard [SCY] stations). The monthly precipitation since 2000 is summarized in Table 2-1. As these data show, the extreme precipitation events occurred during the winter of 2004/2005, and the total annual precipitation during 2005 (34.99 inches) was more than twice the long-term average (16.30 inches). In addition, 15.98 inches of rain was recorded during February 2006 at the SCY station (Table 2-1).

The above-average groundwater recharge associated with these anomalously high precipitation events appears to have caused groundwater levels to rise in the vicinity of the Terminal during the First and Second Quarters of 2006, reversing a trend of decreasing water levels prior to 2005. Recent conditions are substantially dryer. Only 2.66 inches of precipitation was recorded between July 2006 and September 2007; consequently, groundwater levels have started to decrease at the Terminal (refer to Section 3.1, Groundwater Flow Conditions).

2.3 Local Hydrogeology

The sediments beneath the Terminal consist predominantly of fluvial deposits of fine- to coarse-grained unconsolidated sand and gravel with interbedded, discontinuous silt and clay layers that separate permeable aquifer materials. These permeable units create zones of perched water and localized confined groundwater conditions.

Four hydrostratigraphic units have been defined beneath the site. These units are listed below in reverse stratigraphic order:

- Perched groundwater zone referred to as the "perching silt unit"
- Regional water table aquifer
- Intermediate horizon
- Principal production aquifer

Groundwater production in the area is from the principal production aquifer, which is separated from the perching silt unit and the regional water table aquifer by the low-permeability intermediate horizon.

2.4 Monitoring Well Network

The monitoring well network for the terminal consists of 27 wells. Six of the wells are equipped for LNAPL recovery. The remaining wells are gauged and sampled on a quarterly basis. Table 2-2 summarizes the construction details of the Terminal wells.

3.0 Groundwater Monitoring Results

This section presents the results of the groundwater monitoring activities performed during the Third Quarter 2007.

3.1 Groundwater Flow Conditions

Groundwater flow conditions in the perching silt unit and regional water table aquifer are discussed below. The groundwater level information for the Terminal is summarized in Table 3-1. Groundwater elevation contour maps for the perching silt unit and the regional water table aquifer are presented in Figures 3-1 and 3-2, respectively. Hydrographs for select monitoring wells are included on these figures. TRC field data sheets for water level gauging are provided in Appendix A.

3.1.1 Perching Silt Unit

Groundwater flow conditions in the perching silt unit are generally consistent with those observed during the Second Quarter 2007. Groundwater elevations in the perching silt unit ranged from 939.36 feet msl in EB-2 (located within the central portion of the Terminal) to 896.86 feet msl in well EMW-10 (located southwest of the Terminal). The groundwater flow gradient varies slightly in magnitude. Groundwater flow in the northeastern portion of the site has a gradient of 0.0035 foot per foot (ft/ft); groundwater flow in the southwestern portion of the site has a gradient of 0.0085 ft/ft. The groundwater elevations in the perching silt unit wells have increased by an average of 0.29 foot since last quarter (Figure 3-1; Table 3-1).

3.1.2 Regional Water Table Aquifer

The groundwater flow conditions in the regional water table aquifer are generally consistent with those observed during the Second Quarter 2007. Groundwater elevations in the regional water table aquifer ranged from 850.61 feet msl in well EMW-8 (located in the southeast corner of the Terminal) to 847.45 feet msl in EMW-16 (located southwest of the Terminal). The groundwater flow direction is to the southwest with an average hydraulic gradient of 0.0033 ft/ft. Groundwater elevations in the regional water table aquifer wells increased by an average of 0.63 foot since last quarter (Figure 3-2; Table 3-1).

3.2 Groundwater Quality

The distribution of LNAPL and the dissolved-phase concentrations of benzene, MTBE, and tertiary butyl alcohol (TBA) are discussed below. TRC groundwater sampling data sheets are included in Appendix A.

3.2.1 Distribution of LNAPL

The distribution of LNAPL observed during the Third Quarter 2007 in the perching silt unit wells is shown in Figure 3-3. LNAPL was measured in eight wells (EB-1, EB-2, EMW-5, EMW-7, EMW-13, EMW-14, EMW-15, and MW-1). LNAPL thicknesses ranged from 0.09 foot in MW-1 to 1.51 feet in newly installed EMW-7. Only a trace of LNAPL was observed in EB-2.

Compared to the Second Quarter 2007, the measured LNAPL thickness during the Third Quarter 2007 decreased in five wells (EMW-5, EMW-13, EMW-14, EMW-15, and MW-1) and increased in three wells (EB-1, EB-2, and EMW-7).

Depth to LNAPL measurements were not collected in wells EMW-1, EMW-2, EB-3, and EB-4 because these wells are equipped with product-recovery pumps and do not have sufficient annular space for an interface probe. LNAPL does, however, accumulate in these wells.

3.2.2 Analytical Results

Current and historical analytical results are summarized in Table 3-2. The laboratory analytical reports for the Third Quarter 2007 are included in Appendix B (on CD ROM).

3.2.2.1 Perching Silt Unit

Figures 3-4, 3-5, and 3-6 show the distribution of benzene, MTBE, and TBA, respectively, in the perching silt unit. In general, the distributions of these constituents are consistent with the results from previous quarterly monitoring events.

Benzene was detected in three monitoring wells this quarter: EMW-4, EMW-6, and EWM-10 (Figure 3-4). The maximum benzene concentration during the Third Quarter 2007 was reported in EMW-10 (2,700 micrograms per liter [µg/L]). Compared to the Second Quarter 2007, benzene concentrations for the Third Quarter 2007 have increased in one well (EMW-4) and decreased in three wells (EMW-6, EMW-10, and LF-2). One well had the highest reported benzene concentration to date: EMW-4 at 1,300 µg/L. Benzene concentrations were not reported in four wells (LF-1, LF-2, LF-3, and EMW-3) this quarter.

MTBE was detected in four monitoring wells this quarter: EMW-4, EMW-10, LF-2, and LF-3 (Figure 3-5). The maximum MTBE concentration during the Third Quarter 2007 was reported in EMW-10 (32,000 µg/L). Compared to the Second Quarter 2007, MTBE concentrations for the Third Quarter 2007 have increased in two wells (LF-3 and EMW-4) and decreased in two wells (EMW-10 and LF-2). One well had the highest MTBE concentration reported to date (EMW-4 at 8,500 µg/L); one well had the second lowest concentration reported to date (LF-2 at 4.6 µg/L). MTBE concentrations were not reported in three wells (LF-1, EMW-3, and EMW-6) this quarter.

TBA was reported only in EMW-6 at 12 µg/L this quarter (Figure 3-6). This is the first time TBA has been reported in EMW-6 since December 2005 (16 µg/L).

3.2.2.2 Regional Water Table Aquifer

Figures 3-7, 3-8, and 3-9 show the distributions of benzene, MTBE, and TBA, respectively, in the regional water table aquifer. In general, the distributions of these constituents are similar to those of previous quarterly monitoring events.

Benzene was detected only in one monitoring well this quarter: MW-3R (Figure 3-7). Benzene concentrations were reported at 1,100 µg/L. Compared to the Second Quarter 2007, benzene concentrations for the Third Quarter 2007 have decreased in four wells (EMW-8, EMW-9, MW-3R, and MW-8); benzene was not detected above reporting limits in these wells.

MTBE was detected in only two wells this quarter: MW-3R at a concentration of 120 µg/L and EMW-11 at a concentration of 0.55 µg/L (Figure 3-8). MTBE was not detected above reporting limits in four wells (EMW-8, EMW-9, EMW-16, and MW-8) this quarter.

TBA was not detected above the reporting limits in any of the regional water table aquifer wells sampled this quarter (Figure 3-9; Table 3-2).

3.2.3 Field and Laboratory Quality Assurance/Quality Control (QA/QC) Results

Data precision for the Third Quarter 2007 sampling event was evaluated by analyzing two field duplicate samples, two equipment blanks, and two trip blanks. The duplicate samples were collected from wells EMW-8 and MW-3R and analyzed for all target analytes. The relative percent difference (RPD) of the primary and duplicate samples from EMW-8 and MW-3R was acceptable. The trip blanks were analyzed for VOCs, and the equipment blanks were analyzed for all target analytes. The sample results for the blank samples were below the laboratory reporting limits for the target compounds. The data precision, based on the duplicate, trip blank, and field blank, is acceptable.

Data accuracy was evaluated by examining the method blanks, matrix spike/matrix spike duplicate (MS/MSD) percent recoveries and RPDs, laboratory control sample (LCS) percent recoveries, and surrogate percent recoveries. Method blanks were analyzed at the appropriate frequency and were within laboratory detection limits. The surrogate recovery was within acceptance limits for the LCS and MS/MSD. MS/MSD and LCS percent recoveries were analyzed at the appropriate frequency, correctly reported, and within QC limits. Surrogate percent recoveries for benzene, toluene, ethylbenzene, and xylenes (BTEX); MTBE; and VOCs were within laboratory-established control limits. The overall accuracy of the MS/MSD percent recoveries, RPD values, LCS percent recoveries, and surrogate recoveries was acceptable. Some reporting limits were increased due to sample foaming and high concentration of target analytes.

4.0 Summary of Ongoing Activities

KMEP operates an LNAPL recovery system that recovers LNAPL from four wells screened in the perching silt unit (EB-3, EB-4, EMW-1, and EMW-2) using automated skimmer pumps. The system has been active since March 2002. The recovered LNAPL is temporarily stored onsite and later transported to an offsite recycling facility. In the First Quarter 2004, KMEP began recovering LNAPL from wells that have LNAPL accumulation and are not equipped with skimmer pumps. LNAPL is recovered from EMW-14, MW-1, and EMW-5 by manual bailing, and from EMW-13 and EB-1 using a portable, solar-powered free-product recovery collection system. The portable free-product recovery systems in EWM-13 and EB-1 were temporarily removed in February 2007 to accommodate construction in this area. The portable recovery systems will be reinstalled in November 2007. Through September 31, 2007, a total of approximately 22,993 gallons of LNAPL have been recovered from the perching silt unit by automatic and manual methods.

On November 20, 2006, CH2M HILL submitted the *Site Characterization Work Plan* (CH2M HILL, 2006b), which describes the proposed data collection effort to support feasibility studies and remedial design activities. The proposed scope of work includes exploratory drilling in the perching silt unit, the installation of groundwater monitoring wells in the regional water table aquifer, and LNAPL baildown testing and aquifer testing in the perching silt unit. Fieldwork commenced in late January 2007 and was completed in March 2007. KMEP intends to submit a Site Characterization Report to present the findings of this investigation in October 2007.

5.0 Planned Activities

KMEP proposed additional site assessment activities and an evaluation of the existing LNAPL recovery system in the *Additional Site Assessment and Remediation Evaluation Work Plan*, which was prepared by CH2M HILL and submitted to the RWQCB in October 2004 (CH2M HILL, 2004). The proposed work included installation of two new onsite perching silt unit wells, EMW-13 and EMW-14; installation of three additional offsite monitoring wells; and an assessment of LNAPL recovery rates in all wells containing LNAPL.

In May 2005, CH2M HILL submitted the *Remediation Well Installation and Evaluation Report* (CH2M HILL, 2005b), which documents the installation of EMW-13 and EMW-14 and the results of the LNAPL recovery assessment. As described in this report, the proposed offsite monitoring wells will be installed after the U.S. Fish and Wildlife Service grants access to these locations. KMEP is evaluating the logistics of installing automatic LNAPL recovery pumps in EMW-13 and EMW-14. A mobile, solar-powered LNAPL recovery system is presently operating at well EMW-13.

1.0 Introduction

This report presents the results of the quarterly groundwater monitoring activities conducted during the Fourth Quarter 2007 at the Colton Fuel Terminal (the Terminal). The Terminal is located at 2359 South Riverside Avenue in Bloomington, California (Figure 1-1). Quarterly monitoring activities were conducted in response to Cleanup and Abatement Order No. 88-114, dated October 14, 1988, issued by the California Regional Water Quality Control Board (RWQCB), Santa Ana Region. This report also presents sampling results for Sentinel Wells DPPA-1 and DIHZ-1, and West Valley Water District (WVWD) Production Wells 40 and 41.

The Terminal is operated by SFPP, an operating partner of Kinder Morgan Energy Partners, L.P. (KMEP), as a bulk petroleum storage and distribution Terminal. The Terminal was constructed in the 1950s and has been subsequently expanded numerous times. Currently, it occupies 82 acres and consists of 32 refined petroleum product tanks and fuel-loading racks where transport tanker trucks are filled.

The Terminal is divided into individual petroleum company storage and transfer subterminals, which include SFPP, ARCO Petroleum Products Company (ARCO; a division of British Petroleum [BP]), ConocoPhillips, and Shell Oil Products USA (SOPUS). ARCO, SOPUS, and ConocoPhillips perform quarterly groundwater monitoring independent of KMEP. Their monitoring results are included in this report to provide a more complete picture of groundwater conditions at the Terminal.

1.1 Objectives

The objectives of the groundwater monitoring program are to characterize groundwater flow conditions and the lateral and vertical extent of light nonaqueous phase liquid (LNAPL) and dissolved-phase hydrocarbons in groundwater at the Terminal.

1.2 Groundwater Monitoring Activities

Groundwater monitoring at the Terminal includes quarterly sampling, gauging of groundwater levels, and measurement of LNAPL accumulations in onsite and offsite monitoring wells. TRC, Inc., performed field data collection and sampling on behalf of KMEP.

Groundwater samples collected from the monitoring wells were submitted to Alpha Analytical, Inc., of Sparks, Nevada, for the following analyses:

- Total petroleum hydrocarbons quantified as gasoline (TPH-g) and total petroleum hydrocarbons quantified as diesel (TPH-d) using U.S. Environmental Protection Agency (EPA) Method 8015 modified.
- Ethanol and methanol using EPA Method 8015 modified.

- Volatile organic compounds (VOCs) including methyl tertiary butyl ether (MTBE) and other fuel oxygenates using EPA Method 8260B-Full-Scan.

In addition, Sentinel Wells DPPA-1 and DIHZ-1 are sampled twice monthly, and Production Wells 40 and 41 are sampled monthly. Groundwater samples from these wells are analyzed for MTBE using EPA Method 8260B.

2.0 Background

This section presents background information for the Terminal, including descriptions of the physical setting, climate, and local hydrogeology.

2.1 Physical Setting

The Terminal is located within the Riverside Basin in the eastern portion of the Upper Santa Ana River Valley (Figure 1-1). Approximate elevations in the area range from 875 to 1,025 feet above mean sea level (msl), with the topography sloping to the southeast. The Santa Ana River is located approximately 1 mile southeast of the Terminal, and the partially lined Rialto Flood Control Channel traverses through the northeast portion of the Terminal.

2.2 Climate

The total annual precipitation in the vicinity of the Terminal averaged approximately 16.30 inches for the period of record between 1905 and 2005 based on data from the precipitation stations located closest to the Terminal (i.e., the San Bernardino Medical and San Bernardino County Yard [SCY] stations). The monthly precipitation since 2000 is summarized in Table 2-1. As these data show, the extreme precipitation events occurred during the winter of 2004/2005, and the total annual precipitation during 2005 (34.99 inches) was nearly twice the long-term average (16.30 inches). In addition, 15.98 inches of rain was recorded during February 2006 at the SCY station (Table 2-1).

The above-average groundwater recharge associated with these anomalously high precipitation events appears to have caused groundwater levels to rise in the vicinity of the Terminal during the First and Second Quarters of 2006, reversing a trend of decreasing water levels prior to 2005. Recent conditions are substantially dryer. Only 4.59 inches of precipitation was recorded between July 2006 and December 2007; consequently, groundwater levels have started to decrease at the Terminal (refer to Section 3.1, Groundwater Flow Conditions).

2.3 Local Hydrogeology

The sediments beneath the Terminal consist predominantly of fine- to coarse-grained, unconsolidated sand and gravel with occasional layers of silt and clay, which separate permeable aquifer materials and create zones of perched water and localized confined groundwater conditions. Four hydrostratigraphic units have been defined beneath the Terminal; these units are listed below in reverse stratigraphic order:

- Perched groundwater zone, referred to as the "perching silt unit"
- Regional water table aquifer
- Intermediate horizon
- Principal production aquifer

The perching silt unit occurs at approximately 90 feet below ground surface (bgs) at the Terminal, is 5 to 20 feet thick, and dips to the south. An additional 20 to 30 feet of unsaturated sediment occurs between the perching silt unit and the regional water table aquifer. The regional water table aquifer is approximately 150 feet thick and is separated from the principal production aquifer by fine-grained sediments of the intermediate horizon. The groundwater flow direction is toward the southwest in the perched zone, regional water table aquifer, and the principal production aquifer. For further information regarding the subsurface conditions in the vicinity of the Terminal, refer to the *Site Characterization Report for the Colton Fuels Terminal* (CH2M HILL, 2003).

2.4 Monitoring Well Network

The monitoring well network for the Terminal consists of 138 wells, including wells located on the various leases at the Terminal and offsite wells. There are six operational total fluids extraction (TFE) wells and six other wells equipped for TFE located onsite; there is a single groundwater extraction well located offsite. In addition, there are 17 soil vapor extraction (SVE) wells at the Terminal. Table 2-2 summarizes the construction details of the Terminal wells.

3.0 Groundwater Monitoring Results

This section presents the results of the groundwater monitoring activities performed during the Fourth Quarter 2007.

3.1 Groundwater Flow Conditions

Groundwater flow conditions in the perching silt unit and regional water table aquifer are discussed below. The groundwater level information for the Terminal is summarized in Table 3-1. Groundwater elevation contour maps for the perching silt unit and the regional water table aquifer are presented in Figures 3-1 and 3-2, respectively; hydrographs for select monitoring wells are included in these figures. The TRC field data sheets for water level gauging are provided in Appendix A.

3.1.1 Perching Silt Unit

The Fourth Quarter 2007 groundwater elevations in the perching silt unit range from 895.14 feet msl at PVX-5 (located in the northeastern portion of the Terminal) to 883.17 feet msl at LFMW-13 (located along the west-central portion of the Terminal). Groundwater elevations in the perching silt unit have decreased 0.25 foot compared to the Third Quarter 2007 (Figure 3-1). The groundwater flow direction is toward the southwest with a gradient that varies from approximately 0.004 foot per foot (ft/ft) in the northeastern portion of the terminal to 0.005 ft/ft south of the terminal.

3.1.2 Regional Water Table Aquifer

The Fourth Quarter 2007 groundwater elevations in the regional water table aquifer range from 846.54 feet msl at LFDW-1 (located in the northeast portion of the Terminal) to 835.63 feet msl at DW-29 (located southwest of the Terminal, west of Riverside Avenue). Groundwater elevations in the regional water table aquifer have decreased by an average of 0.59 foot since the Third Quarter 2007. The groundwater flow direction in the regional water table aquifer beneath the Terminal varies from southwest to south-southwest with a gradient of approximately 0.0018 ft/ft in the northeastern portion of the terminal to 0.0022 ft/ft south-southwest of the terminal.

3.2 Groundwater Quality

The distribution of LNAPL and concentrations of dissolved-phase benzene, MTBE, and tertiary butyl alcohol (TBA) are discussed below. The groundwater sampling data sheets are included in Appendix A.

3.2.1 Distribution of LNAPL

LNAPL was observed in four perched zone wells (PVX-2, PVX-3, PVX-4, and LFMW-12) located in the east-central portion of the facility as shown in Figure 3-3. Generally, the

distribution of LNAPL in the perching silt unit is consistent with previous monitoring events. Traces of LNAPL were observed in seven perched zone wells (PVX-1, PVX-11, PVX-12, LFDW-1, LFMW-5, LFMW-10, and LFMW-11). LNAPL was not observed in any of the regional water table aquifer wells this quarter (Table 3-1).

3.2.2 Analytical Results

During the Fourth Quarter 2007 groundwater sampling event, 42 groundwater samples from the perching silt unit and 52 groundwater samples from the regional water table aquifer were collected and submitted for laboratory analysis. Analytical results are summarized in Table 3-2. The laboratory analytical reports are included in Appendix B (on CD ROM).

3.2.2.1 Perching Silt Unit

Figures 3-4, 3-5, and 3-6 show the distribution of benzene, MTBE, and TBA, respectively, in the perching silt unit. The highest concentrations of benzene, MTBE, and TBA were detected in the east-central and central portions of the Terminal.

Benzene

Benzene was detected in 19 monitoring wells this quarter (Figure 3-4). Concentrations ranged from 0.49 J micrograms per liter (µg/L) in TWB-6 to 2,000 µg/L in PVX-14. Compared to the Third Quarter 2007, benzene concentrations for the Fourth Quarter 2007 have increased in 11 wells and decreased in 4 wells. The highest concentrations of benzene were reported in wells located in the south-central portion of the facility. Benzene concentrations were reported at or near the laboratory detection limit in wells located downgradient in the southwest portion of the site, east of Riverside Avenue and north of Santa Ana Avenue. Benzene concentrations were not reported in 25 wells this quarter.

MTBE

MTBE was detected in 41 monitoring wells this quarter (Figure 3-5). Concentrations ranged from 0.7 µg/L in TWMW-2A to 10,000 µg/L in PVX-5. Compared to the Third Quarter 2007, MTBE concentrations for the Fourth Quarter 2007 have increased in 23 wells and decreased in 13 wells. The highest concentrations of MTBE were reported in wells located in the central-northeast and central portions of the facility. MTBE concentrations were reported at low to moderate levels in wells located downgradient in the southwest portion of the site. MTBE concentrations were reported at or near the laboratory detection limit in wells located along Riverside Avenue. MTBE was not detected above reporting limits in six wells this quarter.

TBA

TBA was detected in 27 monitoring wells this quarter (Figure 3-6). Concentrations ranged from 12 µg/L in AMW-5 and MobilSB-02 to 17,000 µg/L in PVX-14. Compared to the Third Quarter 2007, TBA concentrations for the Fourth Quarter 2007 have increased in 19 wells and decreased in 4 wells. The highest concentrations of TBA were reported in wells located in the east-central and northeast portions of the facility. TBA concentrations were reported at low to moderate levels in wells located downgradient in the southwest portion of the site. TBA concentrations were reported at the laboratory detection limit in wells located along Riverside Avenue. TBA was not detected above reporting limits in 19 wells this quarter.

3.2.2.2 Regional Water Table Aquifer

Figures 3-7, 3-8, and 3-9 show the distribution of benzene, MTBE, and TBA, respectively, in the regional water table aquifer. The overall distribution of these constituents is generally consistent with that of the previous quarterly monitoring event, which suggests an overall decrease in dissolved-phase concentrations offsite south of the Terminal.

Benzene

Benzene was detected in six monitoring wells this quarter (Figure 3-7). Concentrations ranged from 0.51 µg/L in ASW-3 to 870 µg/L in TFE-A. Compared to the Third Quarter 2007, benzene concentrations for the Fourth Quarter 2007 have increased in two wells and decreased in seven wells. The highest concentrations of benzene were reported in wells located in the eastern and south-central portions of the facility. Benzene concentrations were reported at low levels in wells located downgradient in the southwest portion of the site. Benzene concentrations were reported at the laboratory detection limit in wells located offsite along Riverside Avenue. Benzene was not detected above reporting limits in 47 wells this quarter.

MTBE

MTBE was detected in 27 monitoring wells this quarter (Figure 3-8). Concentrations ranged from 0.54 µg/L in DDW-27 to 13,000 µg/L in DW-47. Compared to the Third Quarter 2007, MTBE concentrations for the Fourth Quarter 2007 have increased in 14 wells and decreased in 12 wells. The highest concentrations of MTBE were reported in wells located in the southwestern portion of the facility. MTBE concentrations were reported at low to moderate levels in most wells located offsite to the west and south. However, MTBE was reported at elevated concentrations in ADW-1 located west of the facility along Riverside Avenue. Additionally, this quarter MTBE concentrations were reported in DW-20 at 65 µg/L; however, based on historical data for this well, these concentrations appear to be anomalous. MTBE was not detected above reporting limits in 25 wells this quarter.

TBA

TBA was detected in 11 monitoring wells this quarter (Figure 3-9). Concentrations ranged from 12 µg/L in ASW-2 to 1,500 µg/L in LFDW-1. Compared to the Third Quarter 2007, TBA concentrations for the Fourth Quarter 2007 have increased in six wells and decreased in six wells. The highest concentrations of TBA were reported in wells located in the east-central and central portions of the facility. TBA concentrations were reported at low to moderate levels in wells located downgradient in the southwest portion of the site. TBA concentrations were reported at or near the laboratory detection limit in most wells located offside along Riverside Avenue. TBA was not detected above reporting limits in 41 wells this quarter.

3.3 Field and Laboratory Quality Assurance/Quality Control (QA/QC) Results

For the Fourth Quarter 2007 sampling event, 13 field duplicate samples, 13 equipment blanks, and 19 trip blanks were collected and analyzed to help assess data reliability. A summary of analytical results for these samples is presented below.

- The duplicate samples were analyzed for all target analytes. The relative percent differences (RPDs) for duplicate samples in MobilMW-02 for MTBE it was 57 percent, in MobilSB-02 for TBA it was 114 percent, in PVX-14 for ethylbenzene it was -48 percent, in PVX-8 for MTBE it was -171 percent. For all other samples, the RPDs were within acceptable limits for all target analytes.
- Results for the trip blanks were below the laboratory reporting limits.
- The equipment blanks were analyzed for all target analytes. Analytical results for the equipment blank samples were below the laboratory reporting limits for target compounds.

Laboratory data quality was evaluated by examining the method blanks, matrix spike/matrix spike duplicate (MS/MSD) percent recoveries and RPDs, laboratory control sample (LCS) percent recoveries, and surrogate percent recoveries. Method blanks were analyzed at the appropriate frequency and were below laboratory detection limits for all analytes of interest. MS/MSD and LCS percent recoveries were analyzed at the appropriate frequency, and correctly reported.

The MS/MSD recovery for MTBE was high on November 8, 2007, but the method control sample was acceptable. The MS/MSD recovery for total petroleum hydrocarbons-extractable (TPH-E) (diesel range organics [DRO]) on November 19, 2007, was above acceptance limits due to heavy-end hydrocarbons (C10-C40). The MS was below the acceptable limit and the MSD was above the acceptable limit for TPH-E (DRO) on November 20, 2007, likely due to non-homogeneity of the sample. The MS/MSD RPD for TPH-E (DRO) on November 20, 2007, and November 26, 2007, exceeded the control limit, but the recovery met acceptance criteria. The MS/MSD RPD for MTBE on December 6, 2007, exceeded the control limit, but the recovery met acceptance criteria. The LCS was within an acceptable limit. The Continuing Calibration Verification recovery for the surrogate Tetracosane was not within established control limits on December 10, 2007. All other surrogate percent recoveries were within laboratory-established control limits. In general, the overall precision and accuracy of the laboratory data are acceptable.

4.0 Summary of Ongoing Remedial Activities

A brief summary of ongoing remedial activities at the Terminal for the Fourth Quarter 2007 is provided below. In October 2007, KMEP staff began operating the remedial systems at the Terminal, and CH2M HILL now prepares and submits the Monthly System Status Reports for both fluid extraction systems. The Soil Vapor Extraction (SVE) System Quarterly Status Report is submitted on a quarterly basis under separate cover.

- **SVE System**: KMEP operates an onsite SVE system to remediate the vadose zone beneath the southwest portion of the site. The SVE system consists of 17 operating SVE wells (16 wells in the perching silt unit and 1 well in the regional water table aquifer) and a thermal oxidizer for offgas treatment. The system has been inoperable since the Fourth Quarter 2006 due to equipment failure. KMEP is currently working to decommission the existing SVE blower and thermal oxidizer and install rental equipment for offgas treatment.

- **Total Fluids Extraction (TFE) System**: KMEP operates the TFE system to contain offsite migration of dissolved-phase contaminants and LNAPL in the regional water table aquifer. The system has been in operation since June 2002. The current TFE system consists of four extraction wells (TFE-A, TFE-B, TFE-C, and TFE-D) and a granular activated carbon (GAC) treatment system. Between October and December 2007, approximately 2.5 million gallons of groundwater was treated and discharged to the Rialto Flood Control Channel under National Pollutant Discharge Elimination System (NPDES) Permit No. CAG 918001. During the Fourth Quarter 2007, the average combined extraction rate for the system was approximately 19 gallons per minute (gpm).

- **LNAPL Recovery:** KMEP has recovered LNAPL from the perching silt unit onsite using two portable skimmer units. The skimmer units were most recently installed in wells PVX-2 and PVX-4, where LNAPL accumulations were thicker. The LNAPL yield from PVX-2 and PVX-4, however, is now negligible. The apparent LNAPL thickness in wells at the Terminal has decreased as water levels have risen in the perching silt unit. Because there are no wells at the Terminal with accumulations of recoverable LNAPL at this time, KMEP has temporarily discontinued LNAPL recovery efforts.

- **Interim Treatment System (ITS):** KMEP operates an offsite groundwater extraction system downgradient of the Terminal. Groundwater is extracted from a single extraction well (EX-1), treated, and then discharged to the sanitary sewer. The system has been in operation since 2002. Due to odor complaints by site occupants, the HiPOx™ treatment unit that was previously used to treat the discharge was replaced with a GAC treatment system, which is now online.

5.0 Planned Activities

This section presents a summary of planned remedial and site characterization activities to be completed by KMEP.

5.1 TFE System Expansion

Planning and design activities to expand the TFE treatment system are ongoing. Because of the planned expansion of the Terminal, the treatment system will need to be relocated west of its current position. A new concrete pad will need to be constructed, and the piping and electrical conduit for the extraction wells will need to be rerouted to the new location of the treatment system. CH2M HILL has completed the civil and electrical design for the new treatment facility, and the City of Rialto has approved the civil design for the new equipment pad. KMEP intends to start construction of the new treatment facility during March 2007.

5.2 Offsite Characterization

CH2M HILL previously proposed to install an additional offsite monitoring well in the regional water table aquifer southwest of the Terminal. The objective of this additional work is to better delineate the lateral extent of MTBE and other dissolved-phase hydrocarbons cross-gradient and downgradient of well ADW-1, where elevated MTBE concentrations have been detected. In December 2007, CH2M HILL corresponded with the City of Rialto Department of Public Works regarding an encroachment permit for the installation of this offsite well (DW-49). In January 2008, CH2M HILL was informed on the telephone that the request to install a monitoring well along Santa Ana Avenue would be denied. Currently, CH2M HILL is evaluating other potential well locations. Details regarding these negotiations with the City of Rialto have been documented in a letter and will be submitted to the RWQCB under separate cover.

Tri-City Airport (revised 4/21/06)

(Original) Apple Valley Airport, Apple Valley, CA

34.53 North / 117.22 West (Northeast of Los Angeles, CA)

A circa 1956-58 photo (courtesy of Paul Bern) of Grant Kirby (Sky King) and Gloria Winters (Penny)

Evelyn (Pinky) Brier, still lives in a house on the site of the former airport,

built after the airport property was sold to developers.

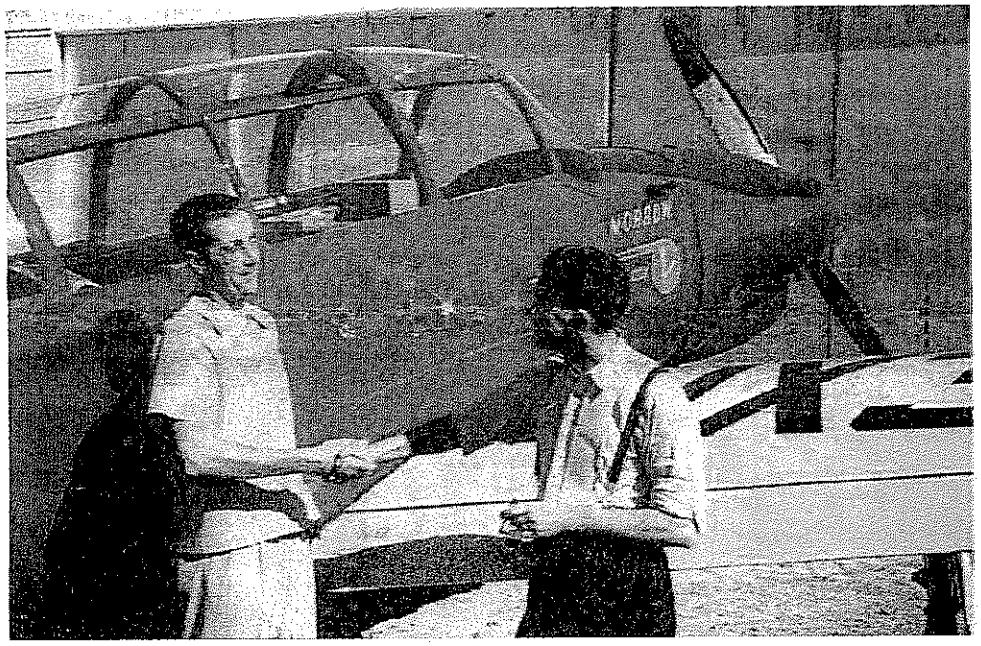
"The building is large enough to house many of the things from the airport,

including a plane & Jeep used to transport people to & from their airplanes."

The airport site is located northeast of the intersection of Interstate 10 & South Western Avenue.

Morrow Field (RTO), Rialto, CA

34.08 North / 117.36 West (East of Los Angeles, CA)



An undated vintage photo of Howard Morrow Sr. & Bill Morrow in front of the prototype Morrow Trainer.

Photo is courtesy of Howard Morrow Jr., via Dan MacPherson.

Entrepreneur Howard Morrow opened Morrow Aircraft in Van Nuys in 1940.

He designed the Morrow Trainer, an all-wood monoplane trainer intended for military use,

and produced a single prototype in 1941.

Morrow Field was reportedly built in 1942,

after the military purchased Morrow's original airfield facilities (later to become Norton AAF).

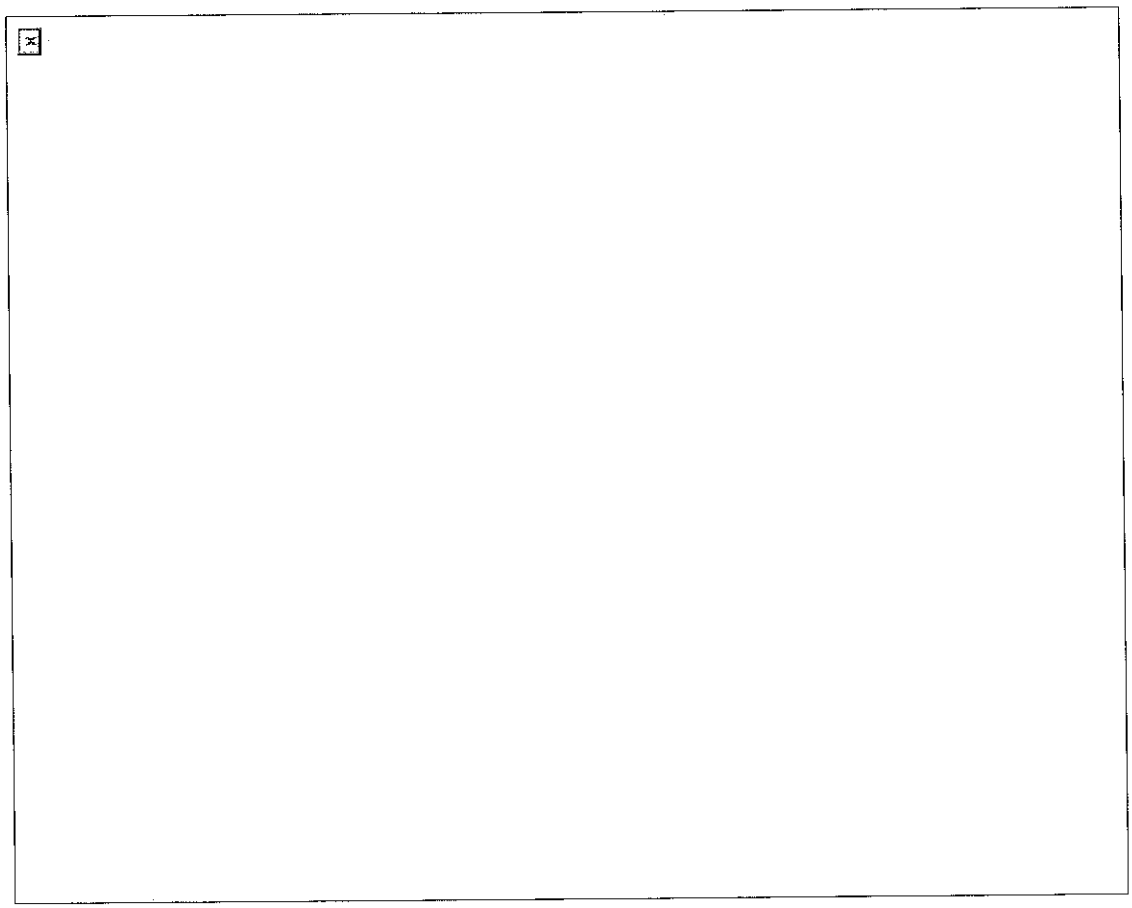
The Morrow company was unsuccessful in obtaining any military orders for their aircraft,

but did produce drop tanks & other aircraft components during WW2.

The sole prototype of the Morrow Trainer went into storage.

Morrow Field may have gone through a period of inactivity after WW2,

as it does not appear on the 1945 San Diego Sectional Aeronautical Chart (courtesy of John Voss).

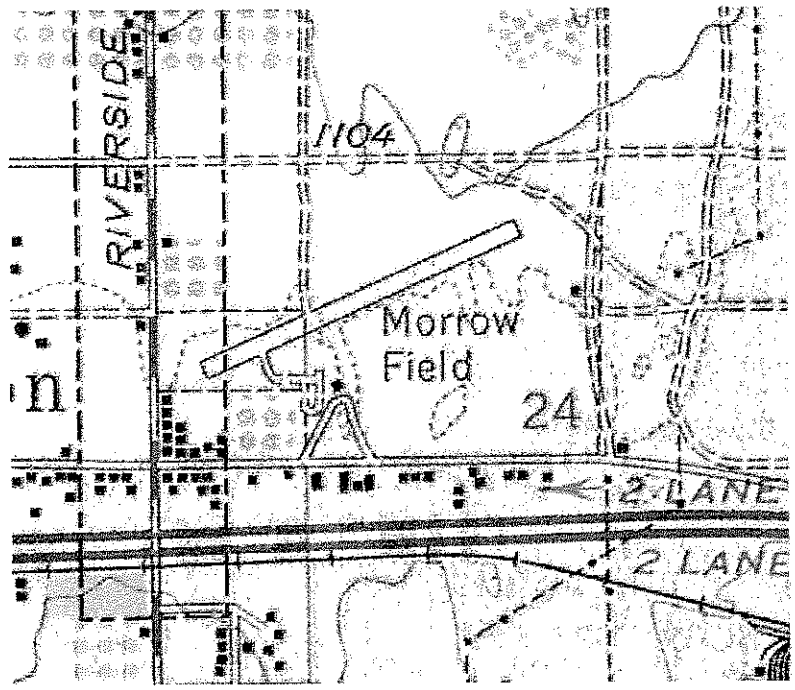


The earliest depiction of Morrow Field which has been located

was a November 1946 aerial view (courtesy of Bob Anderson).

It depicted the field as having a single northeast/southwest runway,

with a ramp & a single hangar on the south side of the field.



The 1954 USGS topo map (courtesy of Scott O'Donnell)

depicted Morrow Field as having a single 3,200' northeast/southwest runway,

and a taxiway leading to a single hangar along the south side of the field.

The 1955 San Diego Sectional Chart (courtesy of John Voss)

described Morrow as having a 3,200' paved runway.

Bob Cannon recalled, "My uncle lived adjacent to Morrow Field,

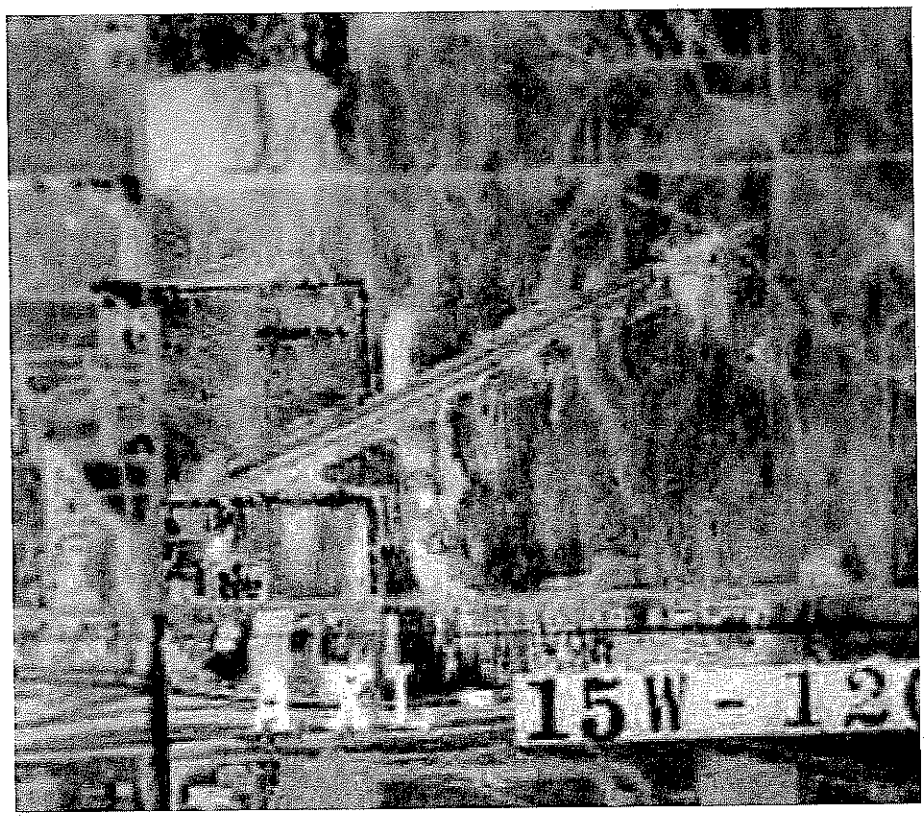
in fact some of the land may have been originally his. I used to fly in to visit them."

The runway at Morrow Field was also used for drag racing.

According to Paul Baechler, "Colton Raceway at Morrow Field (the dragstrip) was active in the 1950s & 60s,

according to racing websites.

Apparently the airport was closed during races & the runway used."



A 1961 aerial view of Morrow Field (courtesy of Bob Anderson)

showed the field in largely the same configuration as it had appeared in the 1946 photo.

Morrow Field was listed among active airports in the 1962 AOPA Airport Directory,

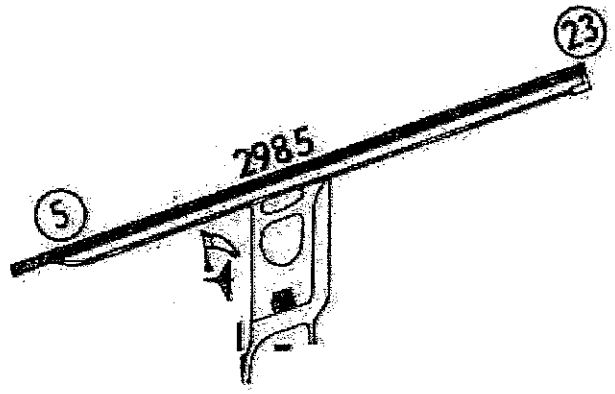
with a single asphalt 3,360' Runway 9/27,

and the operator listed as Howard Morrow.

According to the San Bernardino County Sun, at an unknown date Howard Morrow Sr. built a golf course adjacent to the airfield,

a social club with a swimming pool, and even a short-lived shallow lake on which water skiers were pulled with a cable.

Morrow sold the airport in 1968.



Morrow Field, as depicted in the 1968 Flight Guide (courtesy of Chris Kennedy).

A De Havilland DHC-6 Twin Otter, operated by Cable Commuter Airlines. Undated.

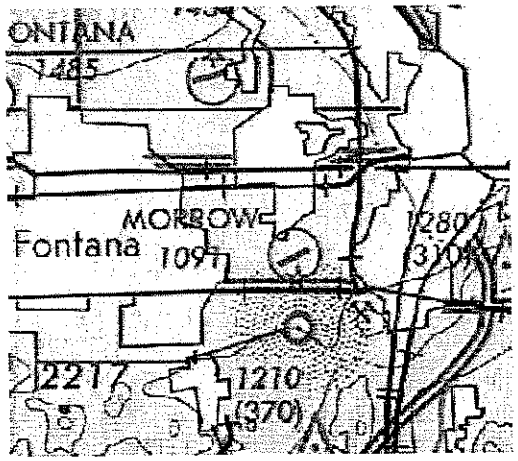
Cable Commuter Airlines began operations in 1968,

and operated passenger airline service into Morrow Field.

They eventually operated twelve De Havilland Twin Otters on routes from Los Angeles

to a number of small airports in the area (including Tri-City Airport & Brackett Field).

Sometime later the airline was bought out by a larger company, which soon went out of business.



Morrow Airport, as depicted on the September 1971 USAF Tactical Pilotage Chart (courtesy of Chris Kennedy).

Phil Du Bois recalled, "I visited the 'Colton' Airport in 1971 several times,

as my instructor took me there for landing practice because it was a 'tight' airport.

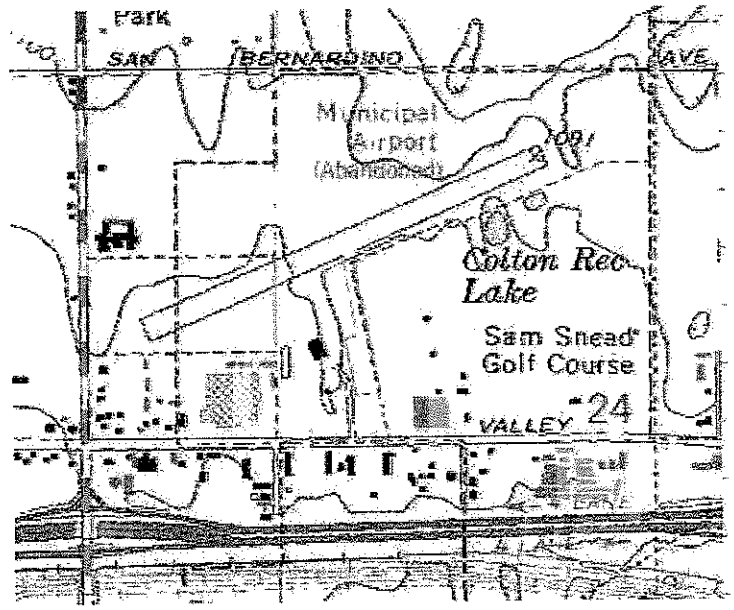
That is there were telephone poles at either end.

It was obvious then that the airport was on it's way out.

I do not remember the airport existing after 1972."

However, "Colton Airpark: Morrow Field" was listed in the 1977 Pilot's Guide to CA Airports (according to Chris Kennedy),

and was described as having a single 2,985' paved Runway 5/23.



Morrow Field evidently was closed at some point between 1977-80,

as it was labeled as "Municipal Airport (Abandoned)" on the 1980 USGS topo map.

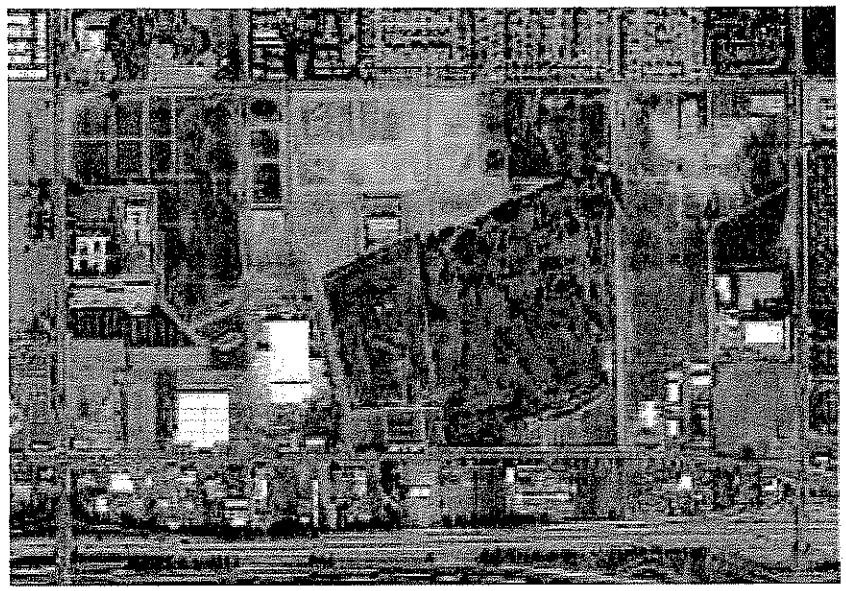
It depicted the airfield as having a ramp extending south from the midpoint of the runway,

with several small buildings (hangars?) on either side of the ramp.

A Price Club was later built on the site, but that location was closed in the mid-1990s.

According to the San Bernardino County Sun,

the former Price Club building is being used by a food processing company.



Aerial photo of the site of the former airport, circa 2000.

Wildrose Avenue has been built through the middle of the former airport.

The golf course built by airport founder Howard Morrow Sr. still exists on the southeast portion of the former airport property,

now known as Sam Snead Golf Course.

The diagonal orientation of the former runway is still apparent in the above 2000 aerial photo of the airfield site.

The airport site is located northeast of the intersection of South Riverside Avenue & West Valley Boulevard.

Upper Santa Ana Valley Groundwater Basin, Riverside-Arlington Subbasin

- Groundwater Basin Number: 8-2.03
- County: San Bernardino, Riverside
- Surface Area: 58,600 acres (92 square miles)

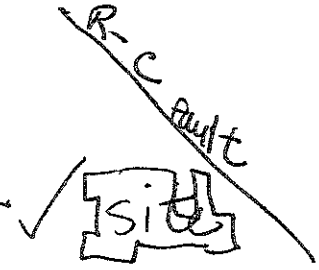
Basin Boundaries and Hydrology

The Riverside-Arlington Subbasin underlies part of the Santa Ana River Valley in northwest Riverside County and southwest San Bernardino County. This subbasin is bound by impermeable rocks of Box Springs Mountains on the southeast, Arlington Mountain on the south, La Sierra Heights and Mount Rubidoux on the northwest, and the Jurupa Mountains on the north. The northeast boundary is formed by the Rialto-Colton fault, and a portion of the northern boundary is a groundwater divide beneath the city of Bloomington. The Santa Ana River flows over the northern portion of the subbasin. Annual average precipitation is about 10 to 14 inches.

Hydrogeologic Information

Water Bearing Formations

Groundwater in the subbasin is found chiefly in alluvial deposits. Quaternary age alluvial deposits in the subbasin consist of sand, gravel, silt, and clay deposited by the Santa Ana River and its tributaries. Near the City of Riverside, the upper 50 feet of deposits are principally clay; however, deposits near the City of Arlington have considerable sand and little clay. At the northern end of the subbasin, coarser gravels with cobbles 4 to 6 inches in diameter are common. Based on data from wells, a minimum specific yield of 15 percent was assigned to unweathered gravels at the extreme northern end of the subbasin. The specific yield increases sharply to 18 percent near the Santa Ana River, then increases gradually to a maximum of 20 percent near the City of Arlington (DPW 1934).



Restrictive Structures

The Rialto-Colton fault to the northeast separates the Riverside-Arlington Subbasin from Rialto-Colton Subbasin. The fault is a barrier to groundwater flow along of its length, especially in its northern reaches (Wildermuth 2000).

A groundwater divide in the alluvium separates the Riverside portion from the Arlington portion of the subbasin (DPW 1934).

Recharge Areas

The Riverside-Arlington Subbasin is replenished by infiltration from Santa Ana River flow, underflow past the Rialto-Colton fault, intermittent underflow from the Chino Subbasin, return irrigation flow, and deep percolation of precipitation (DPW 1934; Wildermuth 2000).

Groundwater Level Trends

Groundwater moves northwest near Arlington, then flows southwest to Arlington Gap, through which it flows into the Temescal Subbasin (DPW

1934). In the northeastern part of the subbasin, groundwater levels near the Santa Ana River fluctuated about 20 feet during 1985 through 2001 and declined about 10 feet during 1995 through 2000. In the central part of the subbasin near Riverside, groundwater levels were fairly steady during 1965 through 1985, fluctuating about 4 feet.

Groundwater Budget (Type A)

Municipal water pumping from the Riverside portion of the subbasin was about 10,100 af during the 2000-2001 fiscal year (Riverside Public Utilities Department 2002).

Groundwater Storage

Groundwater Storage Capacity. The total storage capacity is estimated to be 243,000 af (DPW 1934). The Riverside portion of the subbasin is estimated to have a storage capacity of about 207,000 af and the Arlington portion, a storage capacity of 36,000 af (DPW 1934).
Groundwater in Storage. No information is available.

Groundwater Quality

Characterization. Water within the Riverside-Arlington Subbasin is dominately calcium-sodium bicarbonate. Water sampled from 46 public supply wells has an average TDS content of 463 mg/L with a range of 210 to 889 mg/L. TDS content ranges from 320 to 756 mg/L (Wildermuth 2000).
Impairments. No information is available.

Water Quality in Public Supply Wells

Constituent Group[1]	Number of wells sampled[2]	Number of wells with a concentration above an MCL[3]
Inorganics – Primary	48	2
Radiological	48	11
Nitrates	51	21
Pesticides	50	19
VOCs and SVOCs	50	8
Inorganics – Secondary	38	3

[1] A description of each member in the constituent groups and a generalized discussion of the relevance of these groups are included in *California's Groundwater – Bulletin 118* by DWR (2003).
[2] Represents distinct number of wells sampled as required under DHS Title 22 program from 1994 through 2000.

Upper Santa Ana Valley Groundwater Basin, Rialto-Colton Subbasin

- Groundwater Basin Number: 8-2.04
- County: Riverside, San Bernardino
- Surface Area: 30,100 acres (47 square miles)

Basin Boundaries and Hydrology

The Rialto-Colton Subbasin underlies a portion of the upper Santa Ana Valley in southwestern San Bernardino County and northwestern Riverside County. This subbasin is bounded by the San Gabriel Mountains on the north, the San Jacinto fault on the east, the Box Spring Mountains on the south, and the Rialto-Colton fault on the west. Lytle Creek drains this part of the valley southeastward to its confluence with the Santa Ana River in the southern part of the subbasin.

Hydrogeologic Information

Water Bearing Formations

Groundwater in the Rialto-Colton Subbasin can be found in alluvial deposits. Specific yield ranges from about 6 percent northwest of Rialto to about 16 percent near Colton (DWR 1934). Groundwater within the subbasin is primarily unconfined to semi-confined (Wildermuth 2000).

Alluvial Deposits.
Water-bearing alluvium consists of gravel, sand, silt, and clay. Holocene age alluvial deposits are found beneath the current courses of Lytle and Cajon Creeks along the eastern part of the subbasin, and the Santa Ana River, which crosses the southern part of the subbasin. These Holocene deposits are typically less compacted and weathered than older deposits and have higher permeability (DWR 1970). Alluvial deposits of Pliocene and Pleistocene age are composed of somewhat compacted and weathered deposits of gravel, sand, silt, and clay in discontinuous lenticular bodies. The coarsest material occurs near the mouth of Lytle Creek and the material becomes finer toward the southeast where the coarsest gravels contain few cobbles. Sorting increases southeastward and deposits of highest permeability are well sorted sands found near the Santa Ana River (DWR 1934; DWR 1970).

Restrictive Structures

The San Jacinto fault, its extension barrier "E", and the Rialto-Colton fault are northwest trending barriers to groundwater movement in this subbasin (DWR 1934; DWR 1970; Wildermuth 2000). The San Jacinto fault displaces water levels about 50 feet in older deposits, but is not a barrier in the youngest materials, particularly beneath the Santa Ana River (DWR 1970). Barrier "E" (Dutcher and Garrett 1963) lies south of the San Jacinto fault and displaces groundwater elevations by about 25 to 50 feet (Wildermuth 2000). The Rialto-Colton fault is a barrier to groundwater flow along much of its length, especially in its northern reaches where groundwater elevations can reach near 400 feet higher within the Rialto-Colton Subbasin than in the Chino Subbasin to the west (Wildermuth 2000). Barrier "J" (Dutcher and Garrett 1963) is a northeast-trending, southward

step in groundwater elevation of about 100 feet in the northern part of the subbasin that may be a barrier to groundwater movement southward (Dutcher and Garrett 1963; Wildermuth 2000) or may be a groundwater cascade (DWR 1970).

Recharge Areas

The principal recharge areas are Lytle Creek in the northwestern part of the subbasin, Reche Canyon in the southeastern part, and the Santa Ana River in the south-central part. Lesser amounts of recharge are provided by percolation of precipitation to the valley floor, underflow, and irrigation and septic returns (DWR 1970; Wildermuth 2000). Underflow occurs from fractured basement rock (DWR 1970; Wildermuth 1970) and through the San Jacinto fault in younger Santa Ana River deposits at the south end of the subbasin (Dutcher and Garrett 1958) and in the northern reaches of the San Jacinto fault system (Wildermuth 2000).

Groundwater Level Trends

Groundwater moves toward the Santa Ana River from Lytle Wash in the northwest, and from Reche Canyon in the southeast (DPW 1934; DWR 1970; Wildermuth 2000). In the northern part of the subbasin, hydrographs show quick rises of water levels during high precipitation years and slower decline towards a baseline level over several years. Years of high precipitation may raise groundwater levels 40 or more feet and the range of water levels through the 1990s for a well is typically about 50 feet. In the southern part of the subbasin, near the Santa Ana River, groundwater levels have been relatively stable through the 1990s, fluctuating between 5 and 10 feet of elevation.

Groundwater Storage

Groundwater Storage Capacity. A total storage capacity of about 210,000 af of groundwater is estimated for this subbasin (DPW 1934). About 120,000 af is estimated for the Rialto portion of the subbasin and about 93,000 af is estimated for the Colton portion (DPW 1934). The total storage capacity has also been estimated at 2,517,000 af (DWR 1986).

Groundwater in Storage. An estimated 1,521,000 af of groundwater was in storage in 1984 (DWR 1986).

Groundwater Budget (Type A)

Extractions for the southern portion of the subbasin were 11,295 af for calendar year 1999 (WSBW 2001).

Groundwater Quality

Characterization. Water sampled from 41public supply wells show an average TDS content of 264 mg/L with a range of 163 to 634 mg/L. Groundwater in this subbasin has a TDS content ranging from 201 to 291 mg/L (DWR 1986) and average of 230 mg/L (Wildermuth 2000).

Impairments. No information is available.

Upper Santa Ana Valley Groundwater Basin, Bunker Hill Subbasin

- Groundwater Basin Number: 8-2.06
- County: San Bernardino
- Surface Area: 89,600 acres (120 square miles)

Basin Boundaries and Hydrology

The Bunker Hill Subbasin consists of the alluvial materials that underlie the San Bernardino Valley. This subbasin is bounded by contact with consolidated rocks of the San Gabriel Mountains, San Bernardino Mountains, and Crafton Hills, and by several faults. The southern boundary is the Banning fault, the east boundary is the Redlands fault, the San Andreas fault is roughly the northern boundary, the Glen Helen fault abuts the northwest boundary, and the southwest boundary is the San Jacinto fault. The Santa Ana River, Mill Creek, and Lytle Creek are the main tributary streams in the subbasin (SBVWCD 2000). The range in annual precipitation is 13 to 31 inches.

Hydrogeologic Information

Water Bearing Formations

The water-bearing material in the subbasin consists of Holocene and Pleistocene age alluvial deposits of sand, gravel, and boulders interspersed with deposits of silt and clay. The water-bearing material has been divided into upper and lower aquifers (Hardt and Hutchinson 1980). In the central part of the subbasin, a poorly permeable clay layer separates the aquifers, creating confined conditions in the lower aquifer under about 25 square miles of the valley. Maximum thickness of the upper aquifer is approximately 350 feet, and maximum thickness of the lower aquifer is approximately 650 feet. Groundwater generally converges toward the Santa Ana River in the southwestern part of the subbasin and discharges over the San Jacinto fault at Colton Narrows (USGS 1989). Wells yield up to 5,000 gpm and average about 1,245 gpm. Specific yield of these deposits ranges from 7 – 21 percent and average 13 percent (WE 2000).

Restrictive Structures

The San Andreas fault zone impedes movement of ground water, producing springs and a groundwater level change that marks the fault trace along the northern boundary of the subbasin. The San Jacinto fault forms a strong barrier to groundwater that raises the water table nearly to the surface below the course of the Santa Ana river. The combination of alluvial material with a high water table in a seismically active area creates a hazard for liquifaction. The Redlands and Banning faults also impede ground water movement along the borders of the subbasin (DWR 1986).

Recharge Areas

Recharge to the Bunker Hill Subbasin historically has resulted from infiltration of runoff from the San Gabriel and San Bernardino Mountains. The Santa Ana River, Mill Creek, and Lytle Creek contribute more than 60

percent of the total recharge to the ground-water system (USGS 1989). Lesser contributors include Cajon Creek, San Timoteo Creek, and most of the creeks flowing southward out of the San Bernardino Mountains. The subbasin is also replenished by deep percolation of water from precipitation and resulting runoff, percolation from delivered water, and water spread in streambeds and spreading grounds.

Groundwater Level Trends

In general the far eastern and northwestern portions of the Bunker Hill Subbasin show the largest decreases while the rest of the subbasin shows mostly stable or increasing ground water elevations. Average changes in ground water level elevations between Fall 1998 and Fall 1999 ranged up to an increase of about three feet (SBVWCD 2000).

Groundwater Storage

Groundwater Storage Capacity. Total groundwater storage of the subbasin is 5,976,000 (DWR 1986).

Groundwater in Storage. As of 1998, the total amount of water in storage in the Bunker Hill Subbasin was 5,890,300 (SBVWCD 2000).

Groundwater Budget (Type A)

Pumping data indicate 164,319 af of urban extraction and 23,977 af for water year 1998 (SBVWCD 2000). Natural recharge for 1998 is reported at 23,861 af (SBVWCD 2000) and artificial recharge is reported at 15,835 af (Crowly 2000). DWR (1986) determined an average subsurface inflow to be about 22,500 af.

Groundwater Quality

Characterization. Groundwater within the subbasin is predominately calcium-bicarbonate (USGS 1989) with a TDS range of 150 mg/l to 550 mg/l (DWR 1986). Department of Health Services data for 204 public supply wells show an average TDS content of 324 mg/l, with a range of 155 – 1,140 mg/l. Reported EC measurements range from 95 µmhos – 2,920 µmhos and average 523 µmhos (Vitt 2000).

Impairments. The Bunker Hill Subbasin contains several contamination plumes. The Redlands plume, located between Judson Street and Mountain Avenue in Redlands, is primarily composed of TCE, with lower levels of PCE and DBCP, and contaminates approximately 150,000 acre-ft of groundwater. The Norton Air Force Base plume consists of TCE and PCE. This plume stretches 2 ½ miles long, and contaminates 100,000 acre-ft of groundwater. The Newark and Muscoy plumes are spread around the east and west sides of the Shandon Hills in northern San Bernardino. These plumes consist of TCE and PCE, and are designated Superfund sites. The Santa Fe plume is primarily of petroleum based contaminates. (SBVWCD 2000).

Water Quality in Public Supply Wells

Basin Management

Groundwater management:	Groundwater management in the Bunker Hill Basin is performed by the San Bernardino Valley Water Conservation District, and is based primarily on the maintenance of groundwater levels in the pressure zone. Inflows and outflows are monitored and adjusted so as not to allow water levels to rise to the ground surface in downtown San Bernardino, where the pressure zone exists.(Crowly 2000)

EDR Aerial Photo Decade Package

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDRs professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

When delivered electronically by EDR, the aerial photo images included with this report are for ONE TIME USE ONLY. Further reproduction of these aerial photo images is prohibited without permission from EDR. For more information contact your EDR Account Executive.

Thank you for your business.
Please contact EDR at 1-800-352-0050
with any questions or comments.

UNMAPPED PROPERTY

This report certifies that the complete holdings of the Sanborn Library, LLC collection have been searched based on client supplied target property information, and fire insurance maps covering the target property were not found.

The Sanborn Library includes more than 1.2 million Sanborn fire insurance maps, which track historical property usage in approximately 12,000 American cities and towns. Collections searched:

- ☑ Library of Congress
- ☑ University Publications of America
- ☑ EDR Private Collection

Total Maps: 0

Limited Permission To Make Copies

Petra Geotechnical Inc (the client) is permitted to make up to THREE photocopies of this Sanborn Map transmittal and each fire insurance map accompanying this report solely for the limited use of its customer. No one other than the client is authorized to make copies. Upon request made directly to an EDR Account Executive, the client may be permitted to make a limited number of additional photocopies. This permission is conditioned upon compliance by the client, its customer and their agents with EDR's copyright policy; a copy of which is available upon request.

EDR City Directory Abstract

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening report designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

Thank you for your business.
Please contact EDR at 1-800-352-0050
with any questions or comments.

SUMMARY

- ***City Directories:***

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1922 through 2003. (These years are not necessarily inclusive.) A summary of the information obtained is provided in the text of this report.

This report compiles information by geocoding the subject properties (that is, plotting the latitude and longitude for such subject properties and obtaining data concerning properties within 1980 Feet of the subject properties). There is no warranty or guarantee that geocoding will report or list all properties within the specified radius of the subject properties and any such warranty or guarantee is expressly disclaimed. Accordingly, some properties within the aforementioned radius and the information concerning those properties may not be referenced in this report.

RESUMES

PETRA

CALLIE L. CULLUM
Project Geologist

EDUCATION
Bachelor of Science, 1989, Geology
California State University,
Bakersfield

REGISTRATION
Environmental Assessor, California,
REA 7511

CERTIFICATION
OSHA Hazwoper 40-Hour Health and Safety

OSHA 8-Hour Site Supervisor

OSHA AHERA Asbestos Awareness

PROFESSIONAL SUMMARY

Ms. Cullum is a Project Geologist presenting over 15 years of experience in environmental consulting. She has extensive experience on hazardous waste management projects including remedial investigations and feasibility studies, technical management of field operations encompassing geologic interpretation, sampling protocol, as well as groundwater monitoring well design and installation. Ms. Cullum has also conducted numerous Phase I Environmental Site Assessments for both vacant and commercial properties.

PROFESSIONAL RESPONSIBILITIES

As a Project Geologist for Petra Geotechnical, Inc. Ms. Cullum:

- Conducts Phase I environmental site assessments.
- Conducts Phase II soil and groundwater investigations.
- Directs soil and groundwater remediation projects.

PROJECT EXPERIENCE

Phase I Environmental Site Assessments
Ms. Cullum has conducted numerous Phase I Environmental Site Assessments throughout southern California. These properties have included planned transportation facilities, industrial areas; light to moderate manufacturing facilities; trucking facilities; agricultural sites; dairy farms; residential areas; planned residential housing developments; and both developed land and previously undeveloped land ranging from 1/3-acre in urban areas to approximately 400-acres in rural areas. Ms. Cullum has completed comprehensive Phase I Environmental Site Assessments for the Romona Overpass project in the City of Monrovia and for a two city-block area in West Covina for the proposed site for a new Foothill Transit Bus terminal.

Site Investigation

Ms. Cullum has conducted soil and groundwater investigations for manufacturing production plants, dairies, active and inactive service stations, military bases, amusement parks, sewage treatment facilities, dry cleaners, landfills, and residential sites. Additionally, Ms. Cullum has provided consulting services for site investigations related to the MTBE plume in the Charnock Basin, as well as several military sites in California and Arizona, in compliance with Navy CLEAN and RAC protocol. Her responsibilities also included interfacing with regulatory agency representatives to obtain regulatory closure of sites.

Remediation

Ms. Cullum has provided remediation services of sites containing hazardous materials for amusement parks; manufacturing facilities; agricultural sites; active and inactive service stations; and residential sites. Her remediation experience includes soil vapor extraction, pump and treatment of groundwater, dual phase extraction, installation of oxygenated material into the subsurface, and soil removal.

MR. BRIAN VILLALOBOS
Environmental Division Manager
Senior Associate Geologist

EDUCATION

Bachelor of Science, 1980,
Geology, California State University
Los Angeles

REGISTRATIONS

Geologist, California, RG 4153

Engineering Geologist, California,
CEG 1298

Certified Hydrogeologist
CHg 794

CERTIFICATIONS

OSHA Hazwoper 40-Hour Health and Safety

OSHA 8-Hour Site Supervisor

PROFESSIONAL SUMMARY

Mr. Villalobos has over 15 years of professional experience in environmental geology and hydrogeology throughout southern California. His expertise encompasses methane investigations, environmental hydrogeology, hydrogeologic investigations, engineering geology, landfill studies, and geologic-seismic evaluations. Mr. Villalobos' comprehensive environmental experience includes assessments of soil and groundwater degradation at numerous petroleum service stations, underground fuel storage facilities, former petroleum refineries, chemical plants, Solid Waste Assessments Testing (SWAT) for multiple landfill sites. In addition, he has performed extensive studies in subsurface conditions in relation to regulatory specifications, and participated as an expert witness in several litigation cases.

PROFESSIONAL RESPONSIBILITIES

As a Senior Associate Geologist for Petra Geotechnical, Inc. Mr. Villalobos:

- Conducts soil and groundwater and methane investigations.
- Conducts Phase I environmental site assessments & Phase II site characterizations.
- Directs soil and groundwater remediation projects.
- Pursues new projects and interfaces with existing clients.

PROJECT EXPERIENCE

Educational Facilities

- Stone Ranch Elementary School, Poway Unified School District, Poway California
- Brea Olinda High School, Brea Olinda Unified School District, Brea, California
- Rosecrans School K-8, Paramount Unified School District, Paramount, California

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-05) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

TARGET PROPERTY SEARCH RESULTS

The target property was not listed in any of the databases searched by EDR.

DATABASES WITH NO MAPPED SITES

No mapped sites were found in EDR's search of available ("reasonably ascertainable ") government records either on the target property or within the search radius around the target property for the following databases:

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

EXECUTIVE SUMMARY

STANDARD ENVIRONMENTAL RECORDS

Federal CERCLIS NFRAP site List

CERC-NFRAP: Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

A review of the CERC-NFRAP list, as provided by EDR, and dated 02/05/2013 has revealed that there are 2 CERC-NFRAP sites within approximately 1 mile of the target property.

Lower Elevation	Address	Direction / Distance	Map ID	Page
GATX RAIL	*20878 SLOVER AVENUE*	*SSE 1/4 - 1/2 (0.417 mi.)*	*AO323*	*437*
CALIFORNIA PORTLAND CEMENT CO	*695 SOUTH RANCHO AVE.*	*SE 1/2 - 1 (0.970 mi.)*	*BK488*	*1853*

Federal RCRA CORRACTS facilities list

CORRACTS: CORRACTS is a list of handlers with RCRA Corrective Action Activity. This report shows which nationally-defined corrective action core events have occurred for every handler that has had corrective action activity.

A review of the CORRACTS list, as provided by EDR, and dated 02/12/2013 has revealed that there are 2 CORRACTS sites within approximately 1.5 miles of the target property.

Lower Elevation	Address	Direction / Distance	Map ID	Page
GATX RAIL	*20878 SLOVER AVENUE*	*SSE 1/4 - 1/2 (0.417 mi.)*	*AO323*	*437*
FILTERRECYCLING SERVICES, INC.	*180 MONTE AVENUE*	*SW 1/2 - 1 (0.609 mi.)*	*AX416*	*1689*

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

A review of the RCRA-TSDF list, as provided by EDR, and dated 02/12/2013 has revealed that there is 1 RCRA-TSDF site within approximately 1 mile of the target property.

EXECUTIVE SUMMARY

Federal RCRA generators list

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 02/12/2013 has revealed that there are 13 RCRA-LQG sites within approximately 0.75 miles of the target property.

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 02/12/2013 has revealed that there are 23 RCRA-SQG sites within approximately 0.75 miles of the target property.

State- and tribal - equivalent CERCLIS

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the ENVIROSTOR list, as provided by EDR, and dated 03/13/2013 has revealed that there are 10 ENVIROSTOR sites within approximately 1.5 miles of the target property.

State and tribal landfill and/or solid waste disposal site lists

SWF/LF: The Solid Waste Facilities/Landfill Sites records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. The data come from the Integrated Waste Management Board's Solid Waste Information System (SWIS) database.

A review of the SWF/LF list, as provided by EDR, and dated 02/18/2013 has revealed that there are 4

SWF/LF sites within approximately 1 mile of the target property.

EXECUTIVE SUMMARY

State and tribal registered storage tank lists

UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the State Water Resources Control Board's Hazardous Substance Storage Container Database.

A review of the UST list, as provided by EDR, and dated 03/18/2013 has revealed that there are 17 UST sites within approximately 0.75 miles of the target property.

Local Lists of Hazardous waste / Contaminated Sites

US CDL: A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

A review of the US CDL list, as provided by EDR, and dated 03/04/2013 has revealed that there is 1 US CDL site within approximately 0.5 miles of the target property.

EXECUTIVE SUMMARY

Toxic Pits: The Toxic Pits Cleanup Act Sites database identifies sites suspected of containing hazardous substances where cleanup has not yet been completed. The data come from the State Water Resources Control Board.

A review of the Toxic Pits list, as provided by EDR, and dated 07/01/1995 has revealed that there is 1 Toxic Pits site within approximately 1.5 miles of the target property.

CDL: A listing of drug lab locations. Listing of a location in this database does not indicate that any illegal drug lab materials were or were not present there, and does not constitute a determination that the location either requires or does not require additional cleanup work.

A review of the CDL list, as provided by EDR, and dated 12/31/2012 has revealed that there are 21 CDL sites within approximately 0.5 miles of the target property.

SWEEPS UST: Statewide Environmental Evaluation and Planning System. This underground storage tank listing was updated and maintained by a company contacted by the SWRCB in the early 1990's. The listing is no longer updated or maintained. The local agency is the contact for more information on a site on the SWEEPS list.

A review of the SWEEPS UST list, as provided by EDR, and dated 06/01/1994 has revealed that there are 44 SWEEPS UST sites within approximately 0.75 miles of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 02/12/2013 has revealed that there are 7 RCRA NonGen / NLR sites within approximately 0.75 miles of the target property.

FTTS: FTTS tracks administrative cases and pesticide enforcement actions and compliance activities related to FIFRA, TSCA and EPCRA (Emergency Planning and Community Right-to-Know Act) over the previous five years. To maintain currency, EDR contacts the Agency on a quarterly basis.

A review of the FTTS list, as provided by EDR, and dated 04/09/2009 has revealed that there are 2 FTTS sites within approximately 0.5 miles of the target property.

HIST FTTS: A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

A review of the HIST FTTS list, as provided by EDR, and dated 10/19/2006 has revealed that there are 2 HIST FTTS sites within approximately 0.5 miles of the target property.

RMP: When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

A review of the RMP list, as provided by EDR, and dated 05/08/2012 has revealed that there are 6 RMP

sites within approximately 0.5 miles of the target property.

HAZNET: The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000-1,000,000 annually, representing approximately 350,000-500,000 shipments. Data from non-California manifests & continuation sheets are not included at the present time. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, & disposal method. The source is the Department of Toxic Substance Control is the agency

A review of the HAZNET list, as provided by EDR, and dated 12/31/2011 has revealed that there are 99

EXECUTIVE SUMMARY

HAZNET sites within approximately 0.5 miles of the target property.

MWMP: The Medical Waste Management Program (MWMP) ensures the proper handling and disposal of medical waste by permitting and inspecting medical waste Offsite Treatment Facilities (PDF) and Transfer Stations (PDF) throughout the state. MWMP also oversees all Medical Waste Transporters.

A review of the MWMP list, as provided by EDR, and dated 03/06/2013 has revealed that there are 2 MWMP sites within approximately 0.75 miles of the target property.

HWT: A listing of hazardous waste transporters. In California, unless specifically exempted, it is unlawful for any person to transport hazardous wastes unless the person holds a valid registration issued by DTSC. A hazardous waste transporter registration is valid for one year and is assigned a unique registration number.

A review of the HWT list, as provided by EDR, and dated 04/15/2013 has revealed that there are 2 HWT

sites within approximately 0.75 miles of the target property.

2020 COR ACTION: The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

A review of the 2020 COR ACTION list, as provided by EDR, and dated 11/11/2011 has revealed that there is 1 2020 COR ACTION site within approximately 0.75 miles of the target property.

US AIRS: The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

A review of the US AIRS list, as provided by EDR, and dated 01/23/2013 has revealed that there are 6 US AIRS sites within approximately 0.5 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

A review of the EDR MGP list, as provided by EDR, has revealed that there are 2 EDR MGP sites within approximately 1.5 miles of the target property.

SO CAL GAS/COLTON	NEC OF 6TH STREET AND F	SE 1 - 2 (1.419 mi.)	499	1881

EDR US Hist Auto Stat: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR US Hist Auto Stat list, as provided by EDR, has revealed that there are 41 EDR US Hist Auto Stat sites within approximately 0.75 miles of the target property.

EDR US Hist Cleaners: EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR US Hist Cleaners list, as provided by EDR, has revealed that there are 7 EDR US Hist Cleaners sites within approximately 0.75 miles of the target property.

Environmental Interest/Information System

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

UORS (California - Used Oil Recycling System). California Integrated Waste Management Board (CIWMB) helps communities establish and promote convenient collection opportunities for used oil and used oil filters.

Environmental Interest/Information System
The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

CRITERIA AND HAZARDOUS AIR POLLUTANT INVENTORY

US EPA Risk Management Plan (RMP) database stores the risk management plans reported by companies that handle, manufacture, use, or store certain flammable or toxic substances, as required under section 112(r) of the Clean Air Act (CAA).

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

SHELL SERVICE STATION (Continued) **1006805337**

Hazardous Waste Summary:
Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D018
Waste name: BENZENE

Violation Status: No violations found

FINDS:

Registry ID: 110013308296

Environmental Interest/Information System
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System
AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

Environmental Interest/Information System

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Agency Address:	400 N. PEPPER AVENUE
Agency City,St,Zip:	COLTON 92324
Agency Contact:	MICHAEL HEINE
Agency Telephone:	9095800037
Agency Type:	Private
SIC Code:	0
SIC Code 2:	Not reported
Primary Waste:	Not reported
Primary Waste Type:	Not reported
Secondary Waste:	Not reported
Secondary Waste Type:	Not reported
Design Flow:	0
Baseline Flow:	0
Reclamation:	No reclamation requirements associated with this facility.
POTW:	The facility is not a POTW.
Treat To Water:	Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity:	Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Waste code: 341
Waste name: 341

Waste code: 551
Waste name: 551

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS

ARROWHEAD REGIONAL MEDICAL CENTER (Continued) **1014387404**

USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Waste code: D003
Waste name: A MATERIAL IS CONSIDERED TO BE A REACTIVE HAZARDOUS WASTE IF IT IS NORMALLY UNSTABLE, REACTS VIOLENTLY WITH WATER, GENERATES TOXIC GASES WHEN EXPOSED TO WATER OR CORROSIVE MATERIALS, OR IF IT IS CAPABLE OF DETONATION OR EXPLOSION WHEN EXPOSED TO HEAT OR A FLAME. ONE EXAMPLE OF SUCH WASTE WOULD BY WASTE GUNPOWDER.

Waste code: D008
Waste name: LEAD

Violation Status: No violations found

Environmental Interest/Information System

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

CRITERIA AND HAZARDOUS AIR POLLUTANT INVENTORY

US EPA Risk Management Plan (RMP) database stores the risk management plans reported by companies that handle, manufacture, use, or store certain flammable or toxic substances, as required under section 112(r) of the Clean Air Act (CAA).

Hazardous Waste Summary:
Waste code: D000
Waste name: Not Defined

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D018
Waste name: BENZENE

Waste code: D039
Waste name: TETRACHLOROETHYLENE

Waste code: D040
Waste name: TRICHLOROETHYLENE

Violation Status: No violations found

Hazardous Waste Summary:
Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D018
Waste name: BENZENE

Violation Status: No violations found

FINDS:

Registry ID: 110012544933

Environmental Interest/Information System
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D002

WALMART NO 1862 (Continued) **1014387099**

Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Waste code: D003
Waste name: A MATERIAL IS CONSIDERED TO BE A REACTIVE HAZARDOUS WASTE IF IT IS NORMALLY UNSTABLE, REACTS VIOLENTLY WITH WATER, GENERATES TOXIC GASES WHEN EXPOSED TO WATER OR CORROSIVE MATERIALS, OR IF IT IS CAPABLE OF DETONATION OR EXPLOSION WHEN EXPOSED TO HEAT OR A FLAME. ONE EXAMPLE OF SUCH WASTE WOULD BY WASTE GUNPOWDER.

Furnace exemption:	No
Used oil fuel burner:	No
Used oil processor:	No
User oil refiner:	No
Used oil fuel marketer to burner:	No
Used oil Specification marketer:	No
Used oil transfer facility:	No
Used oil transporter:	No

Hazardous Waste Summary:

Waste code:	D001
Waste name:	IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code:	D002
Waste name:	A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN

WAL-MART #1862 (Continued) **1012175601**

OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Waste code: D005
Waste name: BARIUM

Waste code: D007
Waste name: CHROMIUM

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Hazardous Waste Summary:

Waste code:	D000

ARCO FACILITY NO 09695 (Continued) **1004678016**

Waste name: Not Defined

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D018
Waste name: BENZENE

Violation Status: No violations found

FINDS:

Registry ID: 110012191350

Environmental Interest/Information System

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Hazardous Waste Summary:
Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D008
Waste name: LEAD

Waste code: D018
Waste name: BENZENE

Environmental Interest/Information System

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Local Agency:	SAN BERNARDINO COUNTY
RB Case Number:	Not reported
File Location:	Local Library
Potential Media Affected:	Not reported
Potential Contaminants of Concern:	Other Solvent or Non-Petroleum Hydrocarbon, Other Metal, Other Petroleum
Site History:	The City of Rialto (City) Redevelopment Agency is applying for a $200,000 EPA Brownfield Cleanup Grant to mitigate contamination at a 4.76-acre site located at 1485 S. Willow Avenue, Rialto, California within the Rialto Redevelopment Agencys Gateway Redevelopment Project Area. The City acquired the property on September 15, 2008 after completing Phase I and Phase II Environmental Site Assessments on the property. The Citys goal is to remediate and prepare the Site for a redevelopment project that will involve the consolidation of the Site with the adjacent 13.5 acres of land, which is also under City ownership. The Phase I identified 11 Areas of Concern. The Phase II investigated these 11 areas and identified 3 areas that will require the removal of contaminated soils, additional remedial excavation of buried materials, and removal and disposal of asbestos construction materials and lead based paint. The Regional Water Quality Control Board encourages the City in its efforts to identify and remediate contaminated properties within redevelopment areas of the City. We also recognize the value of mitigating contamination to allow for redevelopment of blighted areas. Therefore, we support your EPA Brownfield Cleanup Grant application and will cooperate with the City to resolve potential contamination issues in order to facilitate the incorporation of the 4.76-acre site into the Rialto Gateway Redevelopment Project. The City of Rialto (City) Redevelopment Agency is applying for a $400,000 EPA Brownfield Assessment Grant to assist in the investigation of various brownfield sites that exist within the community. The City will use the grant funds to inventory, characterize, assess, and conduct cleanup planning on targeted brownfield sites that are located within the historic rail transport center and the older downtown central business district, along Foothill Boulevard (Historic Route 66), as well as other sites in the community that may be identified and selected as a result of the community outreach and participation process. If the grant is awarded, the City will use the grant funds to hire certified environmental professionals to prepare Phase I and Phase II site investigations on previously developed brownfield sites within the community. Based upon the size of the grant, the City anticipates that it will be able to investigate between 10 to 20 brownfield sites in the community depending upon the size and scope of the

HALSEY MACHINERY (Continued) **S101591121**

investigations. The Regional Water Quality Control Board recognizes the need to identify historical sources of contamination in our Region that may have contributed to groundwater contamination. The Regional Water Quality Control Board encourages the City in its efforts to identify and remediate contaminated properties within redevelopment areas of the City. We, therefore, support your EPA Brownfield Assessment Grant application and will cooperate with the City to resolve potential contamination issues. In this manner, the City will be able to facilitate redevelopment of various sites in the community, including sites along historic Route 66.

Environmental Interest/Information System
ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Waste code: 133
Waste name: 133

Waste code: 352
Waste name: 352

Waste code: 611
Waste name: 611

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D007
Waste name: CHROMIUM

Waste code: D008
Waste name: LEAD

Waste code: D009
Waste name: MERCURY

Waste code: D018
Waste name: BENZENE

Violation Status: No violations found

Environmental Interest/Information System

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

CRITERIA AND HAZARDOUS AIR POLLUTANT INVENTORY

US Facility Response Plan (FRP) contains plans for responding, to the maximum extent practical, to worst case discharges of oil.

Agency Contact:	HENRY JOHNSON
Agency Telephone:	Not reported
Agency Type:	Private
SIC Code:	9999
SIC Code 2:	Not reported
Primary Waste:	Stormwater Runoff
Primary Waste Type:	Designated/Influent or Solid Wastes that pose a significant threat to water quality because of their high concentrations (E.G., BOD, Hardness, TRF, Chloride). 'Manageable' hazardous wastes (E.G., inorganic salts and heavy metals) are included in this category.
Secondary Waste:	Not reported
Secondary Waste Type:	Not reported
Design Flow:	0
Baseline Flow:	0
Reclamation:	No reclamation requirements associated with this facility.
POTW:	The facility is not a POTW.
Treat To Water:	Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity:	Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Classification: Small Small Quantity Generator
Description: Handler: generates more than 100 and less than 1000 kg of hazardous waste during any calendar month and accumulates less than 6000 kg of hazardous waste at any time; or generates 100 kg or less of hazardous waste during any calendar month, and accumulates more than 1000 kg of hazardous waste at any time

Handler Activities Summary:
U.S. importer of hazardous waste: No
Mixed waste (haz. and radioactive): No
Recycler of hazardous waste: No
Transporter of hazardous waste: No
Treater, storer or disposer of HW: No
Underground injection activity: No
On-site burner exemption: No
Furnace exemption: No
Used oil fuel burner: No
Used oil processor: No
User oil refiner: No
Used oil fuel marketer to burner: No
Used oil Specification marketer: No
Used oil transfer facility: No
Used oil transporter: No

Hazardous Waste Summary:
Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D007
Waste name: CHROMIUM

Waste code: D035
Waste name: METHYL ETHYL KETONE

Waste code: F003
Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NON-HALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS, AND, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste code: F005
Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL

GATX RAIL (Continued) **1015732747**

KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.
