

City of Colton Power Reliability Program 2013 –2014

Colton Electric Utility (CEU) substation personnel conduct monthly inspections of their 4 substations. Visual, mechanical, and audible inspections are conducted on transformers, circuit breakers, batteries, support structures, grounding systems, insulators/bushing/arrestors, perimeter fences, and site security equipment. CEU substation personnel inspect all substations for abnormalities that warrant maintenance or replacement.

We have identified security lighting concerns, and are actively replacing perimeter lighting with LEDs.
