APN Nos. 0163-362-26-0000, 0163-362-12-0000, 0163-381-02-0000 & 0163-381-01-0000

Leighton Consulting, Inc. (Leighton Consulting) is pleased to present this copy of the Phase I Environmental Site Assessment for the above referenced project in Colton, California, Assessor Parcel Numbers 0163-362-12-0000, 0163-362-26-0000, 0163-381-01-0000 & 0163-381-02-0000 (subject site). Leighton declares that, to the best of our professional knowledge and belief, we meet the definition of Environmental Professional as defined in §312.10 of 40 Code of Federal Regulations (CFR) 312, and the ASTM International E1527-13.

Leighton has the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the subject site. Leighton has developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

If you have questions regarding this report, please contact us. We appreciate the opportunity to be of service to PSOMAS.

Respectfully submitted,

LEIGHTON CONSULTING, INC.

Robert B. Hansen

EXECUTIVE SUMMARY

Leighton Consulting performed a Phase I ESA for the property located at 4050 E. Olympic Blvd, Los Angeles, California. The assessment was conducted in general accordance with ASTM E1527-13 and AAI guidelines.

The Site is currently occupied by a commercial/retail building, constructed in approximately 1928. The property is approximately 0.15 acres in size, and the building is approximately 2,700 square feet. The building is currently divided into two business spaces. All interior spaces are used for the storage of boxed paperwork/business records. The Site vicinity is generally older single-family residential, with commercial/retail along Olympic Blvd.

Based on general topography, and nearby well data, we anticipate the depth to first significant groundwater is greater than 150 feet beneath the site, with a likely flow direction toward the south.

No RECs, CRECs or HRECs were identified for the subject site.

Testing of old electrical/lighting equipment for PCB may be advisable during any future property improvements or demolition affecting these types of equipment.

Non scope issues preliminarily identified at the site include: two areas of current of former roof leaks that are a potential sources for mold, and the likely presence of asbestos containing building materials and lead based paint due the old age of the building (1928). The potential presence of these concerns can best be assessed by actual sampling or testing.

Two former gas stations were identified adjoining west and north of the site (across roadways). The close proximity of these sources indicates a Vapor Encroachment Condition likely exists. However, based on the information found during completion of this Phase I, and our professional judgment, there is a low likelihood these VECs have created a REC on the subject site.

The former gas station that existed adjoining north of the site (across Olympic Blvd.) in the 1940s and 1950s, is judged to have a low likelihood of having created a REC on the site based on the great depth to groundwater (>150 feet), lack of evidence indicating a petroleum release, the later re-development of this property, and the somewhat short operating duration of this station. The former gas station that existed adjoining west of the site (across Townsend Ave.) during the 1950s through mid-1980s, is judged to have a low likelihood of having created a REC on the site, based on the great depth to groundwater, case closure information reviewed, and the No Further Action (NFA) letter issued for this case.

There is a low to moderate concern regarding the crude oil pipeline that is likely adjoining the site to the east. No specific information could be obtained regarding its actual location or potential leak history, because of a lack of response from the pipeline operator. The operator *did* indicate it may not be actively used.

DRAFT

1.0 INTRODUCTION

1.1 Authorization

Leighton Consulting, Inc. (Leighton Consulting) performed a Phase I Environmental Site Assessment (ESA) for the subject property (”Site) located in Colton, California (Site Location Map – **Figure 1**). This work was completed in general accordance with our authorized agreements with PSOMAS (Client).

1.2 Purpose

The purpose of the Phase I ESA was to identify recognized environmental conditions (RECs), historical RECs (HRECs), or controlled RECs (CRECs) in connection with the subject site. The assessment was conducted in general accordance with ASTM E1527-13 guidelines (ASTM E1527-13, 2013).

According to ASTM E1527-13, RECs are defined as *“the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to any release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment. De minimis conditions are not RECs.”* De minimus conditions are defined by ASTM 1527-13 as *“a condition that generally does not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies. Conditions determined to be de minimis conditions are not recognized environmental conditions nor controlled recognized environmental conditions.”*

According to ASTM E1527-13, HRECs are defined as “*a past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls.*”

According to ASTM E1527-13, CRECs are defined as “*a REC resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority, with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls.*”

1.3 Scope of Work

The scope of work was performed in accordance with the Leighton’s proposal, and included the following tasks:

- A records review (including previous environmental reports, selected governmental databases, and historical site usage information);

DRAFT

Leighton

- A reconnaissance-level visit of the subject site for evidence of existing or potential release(s) of hazardous materials and/or petroleum products;
- Interviews; and
- Preparation of this report presenting our findings.

1.4 Significant Assumptions

Leighton assumes that the purpose of this Phase I ESA is to provide appropriate inquiry into the previous ownership and use of the subject site, as well as conditions surrounding the site, so that the Client may understand potential environmental concerns related to hazardous substances and petroleum products, and qualify for the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA) landowner liability protections as defined in CERCLA, 42 USC §9601(35)(B).

Leighton also assumes that information provided by the Client and its agents, regulatory database search provider, and regulatory agencies is true and reliable.

1.5 Limitations and Exceptions

This Phase I ESA was conducted in a manner consistent with the level of care and skill ordinarily exercised by members of the profession currently practicing in the same locality under similar conditions.

The observations and conclusions presented in this report are professional opinions based on the scope of activities, work schedule, and information obtained during the assessment described herein. Opinions presented herein apply to property conditions existing at the time of our study, and cannot necessarily be taken to apply to property conditions or changes that we are not aware of or have not had the opportunity to evaluate. It must be recognized that conclusions drawn from these data are limited to the amount, type, distribution, and integrity of the information collected at the time of the investigation, and the methods utilized to collect and evaluate the data. Although Leighton Consulting has taken steps to obtain true copies of available information, we make no representation or warranty with respect to the accuracy or completeness of the information provided by others.

This practice does not address whether requirements, in addition to all appropriate inquiry have been met in order to qualify for the landowner liability protections including the continuing obligation not to impede the integrity and effectiveness of activity and use limitations, or the duty to take reasonable steps to prevent releases, or the duty to comply with legally required release reporting obligations. Users should also be aware that there are likely to be other legal obligations with regard to hazardous substances or petroleum products discovered on the subject site that are not addressed in this practice, and that may pose risks of civil and/or criminal sanctions for non-compliance.

The Client is referred to **Appendix H** regarding important information provided by Geoprofessional Business Association (GBA) on geoenvironmental studies and reports.

DRAFT

1.6 Special Terms and Conditions

The scope of work for this Phase I ESA did not include assessment of issues beyond those required within ASTM 1527-13. Issues not assessed include, but are not limited to: sampling of air, soil, soil gas, water, building materials, paint, or other media; testing of electrical equipment for the presence of polychlorinated biphenyls (PCBs); assessment of natural hazards such as naturally occurring asbestos, radon gas or methane gas; assessment of the potential presence of mold or radionuclides; or assessment of nonchemical hazards such as the potential for damage from earthquakes or floods, or the presence of endangered species or wildlife habitats. This Phase I also did not include an assessment of the environmental compliance status of the subject site, or of businesses operating at the subject site, or a health-based risk assessment.

1.7 User Reliance

This report is for the exclusive use of PSOMAS and the CITY OF COLTON. Use of this report by any other party shall be at such party's sole risk.

DRAFT

2.0 SITE DESCRIPTION

2.1 Location and Legal Description

The Site has no particular street address. It is located south of Florez, Fernando and E. Congress Streets, northwest of the Santa Ana River and east of the railroad tracks (see **Site Location Map - Figure 1**).

The Site consists of the following four Assessor Parcel Nos. (APNs):

- 0163-362-26-0000 (APN - 26)
- 0163-362-12-0000 (APN -12)
- 0163-381-01-0000 (APN - 01)
- 0163-381-02-0000 (APN - 02)

Attached **Figure 2** shows the limits of each of the four APNs which make-up the subject Site.

2.2 Property and Vicinity General Characteristics

The Site is currently vacant, undeveloped land along the edge of the Santa Ana River. The general Site vicinity is occupied by single-family residential to the north, the River wash to the east and south, and commercial/industrial development to the west.

2.3 Current Use of the Subject Property

The Site is approximately 46 acres in size, and is undeveloped vacant land with no surface structures. The northern portion of APN -12 was used previously as an uncontrolled landfill, and is fenced. This is known as the Guyaux Waste Disposal Site (Guyaux WDS). All other areas of the Site are unfenced and publicly accessible via dirt roads (see **Appendix B – Photo nos. 1 & 2**).

2.4 Descriptions of Structures, Roads and Other Improvements on the Property

The Site has no surface structures. Numerous small dirt roads exiting throughout the site, and are publicly accessible, though generally only via foot or heavy duty vehicles and/or four-wheel drive. The northern portion of APN -12, used previously as an uncontrolled landfill, is fenced. All other areas of the Site are unfenced and publicly accessible via dirt roads. The Site is vacant, so there is no active utility service. The following utilities would provide service to the Site:

Natural Gas:	Southern California Gas Company
Source of Potable Water:	City of Colton
Electric:	City of Colton
Sewage Disposal:	City of Colton
Waste Disposal:	CR&R Environmental Services

DRAFT

2.5 Current Uses of Adjoining Properties

Properties adjoining to the subject site include the following (see also **Site and Adjoining Properties** - **Figure 2**):

Direction	Address	Company Name/Site Use
Northwest	240 E. Congress St.	Storage / Const. Yard (**Appendix B** - **Photo 3**)
North	Various Addresses (across E. Congress) Various Addresses	Single Family Res (**Appendix B - Photo 4**) Single Family Res (**Appendix B – Photo 5**)
East	N/A	Vacant /Santa Ana River (**Appendix B - Photo 6**)
South	N/A	Vacant / Santa Ana River (**Appendix B - Photo 7**)
West	130 Fogg Street 1200 S. Jefferson Ln 1280 S. Jefferson Ln	ReadyRefresh Bottled Water Co. (**Appendix B - Photos 8 & 9**) Trucking Yard (**Appendix B - Photo 10)** Cascade Warehouse (Wood Products) (**Appendix B - Photos 11 &12**)

DRAFT

Leighton

3.0 USER PROVIDED INFORMATION

The User of this Phase I ESA has been identified by the client as City of Colton. As a part of the ASTM E1527-13 process, Mr. Victor Ortiz / Mr. Mark Tomich (City of Colton employees) were forwarded the User questionnaire regarding the Site. A copy is provided in **Appendix C**, and is discussed below.

3.1 Environmental Liens or Activity and Use Limitations / Chain of Title

Mr. Ortiz/Mr. Tomich had no knowledge of any prior reports, documents or correspondences concerning environmental conditions on the subject property other than those provided already by the City of Colton via a web-based document repository.

Mr. Ortiz/Mr. Tomich indicated they do not have knowledge regarding any potential environmental liens or activity use limitations (AULs) regarding the Site. Leighton Consulting also subcontracted NETR to research for potential environmental liens or Activity Use Limitations (AULs). The results of the search indicate no environmental liens or AULs. A copy of the lien search report is provided in **Appendix D**.

Leighton completed a cursory review of a several hundred pages of chain-of-title documents provided by the City of Colton (via web based document repository), presumed to be associated with the Site or other parcels making up the larger Soccer Park Project. The review was limited by: the quality of images and legibility, the large volume of the documents, and the inability to reasonably determine with certainty if the documents were associated with the Site, or if so, which parcels. The documents ranged in age from late 1890s to relatively recent. Most title documents indicated transfers between individuals, with much fewer transfers also involving development, investment, or other types of companies. One transfer was noted between Chevron Phillips Chemical Company and Cascade Warehouse in 2004; however, this is presumed to be related to the property adjoining west of the Site (currently occupied by Cascade Warehouse). In summary, the cursory review of chain-of-title documents did not reveal obvious evidence indicating a likely REC on the site.

3.2 Specialized Knowledge

Mr. Ortiz/Mr. Tomich indicated they do not have any specialized knowledge or experience related to the property that would give them knowledge of potential chemical or processes used at the Site.

3.3 Commonly Known or Reasonably Ascertainable Information

Mr. Ortiz/Mr. Tomich indicated knowledge of past usage included a portion of the Site containing a former landfill. They also indicated prior reports on the Guyaux WDS would indicate specific chemicals on the Site. They had no other knowledge of any chemical releases or environmental cleanups on the Site.

DRAFT

3.4 Valuation Reduction for Environmental Issues

Mr. Ortiz/Mr. Tomich did not answer the questions regarding whether the purchase price of the site reflected the fair market value. This is considered a data gap of moderate significance.

3.5 Owner, Property Manager, and Occupant Information

The Site Owner and Manager is the City of Colton. The site is vacant and unoccupied.

3.6 Reason for Performing Phase I ESA

The Phase I ESA is being completed for information to support Site development CEQA issues related to a proposed Soccer Field Complex.

3.7 Other

No other significant user information was provided.

DRAFT

4.0 RECORDS REVIEW

4.1 Physical Setting Source(s)

Leighton reviewed pertinent maps and readily available literature for information on the physiography and hydrogeology of the subject site. A summary of this information is presented in the following subsections.

4.1.1 Topography

The subject site is located in Section 29, Township 1 South, Range 04 West of the San Bernardino Baseline and Meridian (USGS, 1980). Site elevation ranges from approximately 940 to 912 feet above mean sea level. The overall Site slope is predominantly downwards towards the Santa Ana River channel (i.e. towards the southeast to southwest).

The highest site elevations are located in the northern portion of the site, while the lowest are in the southwestern-most corner. Portions of the Site are raised terraces above the majority of the remaining Site. These raised terrace areas are described as follows:

- Northwestern portion of APN 0163-362-26
  Approximately 10 feet above most of Site (**Photo 13 - Appendix B**).

- Northern Portion of APN 0163-362-12
  Approximately 10-12 feet above most of Site. Reported former uncontrolled landfill area (Guyaux WDS) (**Photo 13 - Appendix B**).

- Northwestern portion of APN 0163-381-02
  Approximately 10-15 feet above most of Site. Probable natural river terrace area (**Photo 14 - Appendix B**).

4.1.2 Surface Water

No surface water was observed on-Site. The active Santa Ana River channel is adjoining just southeast of the Site. The Site is within approximately 300 to 500 feet of the Santa Ana River channel at its closest location. No other significant bodies of surface water (i.e. oceans, lakes, reservoirs, rivers, streams, etc.) are located within a 0.25 mile radius of the Site (USGS, 1980).

4.1.3 Geology and Soils

Geologic deposits beneath the Site area are reported to be Pliocene to Holocene age alluvium and terrace deposits. The Rialto-Colton Fault, a northwest trending fault, is located a few thousand feet northeast of the site (Chino Basin Watermaster, 2016).

Shallow Site soils are reported to be silty sands, sands, and gravelly sands (EEC, 2010) (**Appendix E**).

DRAFT

4.1.4 Hydrogeology

The Site is located in the Middle Santa Ana River Groundwater Basin, and more specifically within the Riverside-A subbasin. Waters in this subbasin have been assigned beneficial uses by the California Regional Water Quality Control Board, Santa Ana Region (SARWQCB), including: municipal, agricultural, industrial and process supply (SARWQCB, 2016).

Shallow groundwater flow beneath Site is likely to fluctuate greatly based on conditions (i.e. flow) in the adjoining Santa Ana River, but is expected to have a predominant flow towards the northwest to southwest. Information from two investigations approximately 250-400 feet west of the Site indicates that in the mid to late 1990s groundwater was approximately 16 to 50 feet deep, and flowed toward the northwest to southwest (see **subsection 4.3.1 - DTSC Envirostor & Geotracker**).

More recent reports (from within the past approximate 10 years) related to the Site have indicated the depth to groundwater beneath the Site is approximately 85 to 92 feet. During the current Site reconnaissance (discussed below in **Section 5.0**) three groundwater monitoring wells were observed on/adjoining the Site. One of these groundwater monitoring wells was accessible (i.e. unlocked) and was checked for depth to groundwater. No groundwater was detected in this well to its maximum depth of 105.4 feet. This well (designated well "A") is located centrally on the Site, adjoining south of the Guyaux WDS (see **Figure 2**).

In summary, groundwater beneath the Site likely flows predominantly toward the northwest to southwest, is currently greater than 105 feet deep, but has likely fluctuated greatly over the decades, and been as shallow as 16 feet or even less.

4.2 Standard Environmental Record Sources

Leighton Consulting contracted a search of selected environmental databases. The search was completed by Environmental Risk Information Services (ERIS). The search was done in general accordance with requirements of ASTM E1527-13. A copy of the database search report is provided in **Appendix E**; however, a summary of the results is discussed below.

4.2.1 Subject Property

The Site itself is listed (under the "Guyaux Landfill" name) in the CERCLIS, CERCLIS NFRAP, FINDS, FRS, CLEANUP SITES, LDS, SEMS ARCHIVE, SWF and LF databases. All listings appear related to the Site being a former landfill, and its associated assessments as a potential federal CERCLIS site, as well as assessment by the state Regional Water Quality Control Board. Further information in this regard is discussed below in **Subsection 4.2.5** (**Other Reports**) and **4.3** (**Geotracker**).

4.2.2 Offsite

Provided below is a brief summary of some of the more notable database listings for nearby facilities, either due to their close proximity to the Site, and/or the nature of their listings:

DRAFT

NOTABLE LISTINGS	
LISTING NAME	**ADDRESS / LOCATION**
Cooley Ranch Landfill	**600 Block of Congress Street, Colton**
This facility is listed in the FED BROWNFIELDS and FINDS FRS databases. The listed address (600 Block of Congress Street) would indicate this facility is on the west side of the Santa Ana River and likely adjoining the Site; however, further research of this facility at the SARWQCB indicates it is actually located on the other side of the Santa Ana River, approximately 1,000 to 1,500 feet southeast of the Site. Further details of this facility are discussed in more detail below in **subsection 4.3** (**SARWQCB**).	
Arrowhead Mtn Spring Water	**130 Fogg Street**
This facility is located approximately 250 feet west of the Site. It is listed in the DELISTED TANK, LUST, CERS HAZ, SAN BERN CUPA and EMISSIONS databases as a result of a former LUST case and having permits to store and handle hazardous substances. Further details of the LUST case at this facility are discussed in more detail below in **subsection 4.3** (**Geotracker**).	
8th Street Auto Body / FSM – David R. Nash	**1090 S. 8th Street**
This facility is located approximately 250 feet northwest of the Site. It is listed in SAN BERN CUPA, and EMISSIONS databases. No evidence of a violation or unauthorized release is listed. It is our judgment there is low likelihood these listings indicate a REC on the Site.	
Arrowhead Waters Garage	**1071 S. 8th Street**
This facility is located 250 feet northwest of the Site. It is listed in the HHS, HIST TANK, CERS HAZ and SAN BERN CUPA databases. No evidence of a violation or unauthorized release is listed. It is our judgment there is low likelihood these listings indicate a REC on the Site.	
Griffin Wheel / Plexco / Griffin Wheel Dump	**1280 Jefferson Lane**
This facility is located approximately 250 feet west of the Site (at its closest point). It is listed in the CLEANUP SITES, LDS, CERCLIS, EMISSIONS, SEMS and ENVIROSTOR databases, mostly related to former dumping on the facility and the associated investigations. Further details of this investigation are discussed below in **subsection 4.3** (**DTSC Envirostor**).	
Eco Building Products / ICE Products / Cascade Warehouse co. / Performance Pipe	**1280 Jefferson Lane**
This is the same facility as listed above, and is located approximately 250 feet west of the Site (at its closest point). These additional listings are under other business names, and are within the SAN BERN CUPA, EMISSIONS and RCRA-SQG databases. No evidence of a violation or unauthorized release associated with these listings is listed. It is our judgment there is low likelihood these specific listings indicate a REC on the Site.	
Tom Son Tank Lines	**151 W. Fogg St.**
This facility is located approximately 500 feet northwest of the Site. It is listed in the SAN BERN CUPA database. No evidence of a violation or unauthorized release is listed. It is our judgment there is low likelihood this listing indicates a REC on the Site.	
SCE-WHEEL Substation	**Jefferson & Washington**

DRAFT

This facility is located approximately 550 feet west of the Site. It is listed in the SAN BERN CUPA database. No evidence of a violation or unauthorized release is listed. It is our judgment there is low likelihood this listing indicates a REC on the Site.	
PICO Rivera Pallet Inc.	**240 E. Congress Street**
This facility is located adjoining northwest of the Site. It is listed in the SAN BERN CUPA database. No evidence of a violation or unauthorized release is listed. It is our judgment there is low likelihood this listing indicates a REC on the Site.	
Sud-Chemie, Inc. / Sud-Chemie Performance Packaging	**926 S. 8th Street**
This facility is located approximately 650 feet northwest of the Site. It is listed in the SAN BERN CUPA and RCRA SQG databases. No evidence of a violation or unauthorized release is listed. It is our judgment there is low likelihood these listings indicate a REC on the Site.	
Angelica / Braun Industries	**925 S. 8th Street**
This facility is located approximately 850 feet northwest of the Site. It is listed in the SAN BERN CUPA, DRYCLEANERS and HIST TANK databases. No evidence of a violation or unauthorized release is listed. It is our judgment there is low to low-moderate likelihood these listings indicate a REC on the Site.	

4.2.3 Oil and Gas Fields

Leighton Consulting reviewed the California Department of Conservation, Division of Oil, Gas, and Geothermal Resources (DOGGR) online Well Finder database. No wells were identified on the Site, or within a one-mile radius (DOGGR, 2019).

4.2.4 Radon

Radon is not regulated within the State of California. Nonetheless, the California Department of Health Services (CDPH) and the USEPA both recommend a threshold of 4 picocuries per liter (pCi/L) above which certain precautions be taken to mitigate radon buildup in structures. The Site is reported to be located in Zone 2, which has a likely predicted average indoor radon screening levels between 2 and 4 pCi/L (**Appendix E**).

4.2.5 Other Environmental Reports

Historical documents were provided by the Site Owner (City of Colton) via a web-based repository. Other technical documents were found on the State of California Geotracker website. These were the two largest sources of historical environmental reports associated with the Site. For convenience, document from these two sources are discussed below. The documents were reviewed, and summary of the more relevant ones is provided below in chronological order (oldest to most recent):

USEPA (1997A) / Bechtel (1995) – Prepared by Bechtel for the USEPA in response to the Guyaux Landfill being identified as a potential hazardous waste site within CERCLIS. The

DRAFT

Leighton

landfill area is identified as an approximate 6-acre, semi-circular feature at the south end of Florez and Fernando Streets, and is reported to have been operated since 1930. Reported wastes dumped at the landfill include plaster molds, broken porcelain, slag, several tires, old furniture, bricks and construction materials. The shallow soils are reported as silt and sands, with a depth to groundwater of approximately 150 feet, and likely flow direction to the south (Bechtel, 1995) (**Appendix I**).

Bechtel (1995) reports the SARWQCB has been involved with the site since 1977, but that the owner (Ralph Guyaux) has not complied with requests for soil and groundwater sampling. They also report that Dames and Moore did a Phase II assessment in 1989 at the Griffin Wheel Company (west of Site) (11 soil borings) and found up to 105 mg/kg of As, 72 mg/kg of Cd, and 9,250 mg/kg in slag that was dumped at the landfill on the Site. The Dames and Moore report was not found, or provided to Leighton, during completion of this Phase I. In summary, the USEPA concluded the Site does not qualify for listing on the Superfund National Priorities List, but cautions that arsenic, cadmium, chromium, lead, manganese, mercury and toluene are present above background levels. They also forwarded this information to the California DTSC (USEPA, 1997A) (**Appendix I**).

SARWQCB (1995) - This 1995 Memo from the California Regional Water Quality Control Board, Santa Ana Region (SARWQCB), indicates they are not pursuing enforcement action against the Guyaux Site. Rationale provided in the memo includes: The site does not appear to be having a significant impact to groundwater; the site is well graded and drains well; the site has received no wastes for more than 12 years, and most waste have been in place for more than 30 years; and a former study (RIX report) established groundwater elevation, direction and water quality data, therefore further investigation is likely to achieve little (SARWQCB, 1995) (**Appendix I**).

USEPA (1997B) – This is an undated timeline re. the Guyaux waste disposal site (Guyaux WDS). We estimate its date around 1997. The timeline is summarized as follows:

1930's: Construction debris dump from Colton rebuilding post-flood
1950's: Temporary storage of bricks and construction materials
1955: Residential north of landfill developed
1966: Robert Zandbern purchased from Henry Adams
1973: Ralph Guyaux acquires use of site and started landfill operations for recycling/disposal of waste material from Griffin Wheel Company (black slag) and Crane Company (metal/porcelain), both located close to landfill.
1977: Guyaux CUP expires / Residents sign petition to City asking that dumping be stopped, CUP renewal denied, and fencing be installed around landfill / Water board requests a Waste Discharge Report / Incomplete report submitted.
1978: City of Colton denies CUP for site.
1980: Landfill continues to be used for Griffin Wheel and Crane Co. dumping.
1981: Water Board request Guyaux test black slag. Guyaux does not comply and tells water board the test results were lost or not reported. City request water board copy it on further correspondences regarding the "illegal operation".

DRAFT

1985: Water Boards requests installation of network of groundwater monitoring wells. Guyaux does not comply. Site starts to be used for storage of care and machinery for scrap and salvage.
1988: Water Board request Guyaux submit a Solid Waste Assessment Test (SWAT). Guyaux does not comply.
1989: Dames and Moore samples slag at Griffin Wheel property /
1989: SAWPA conducts hydrogeologic study of area for rapid infiltration of water. Concludes area should be abandoned due to nearby landfill and refers contamination concern to Water Board.
1992: Guyaux Landfill site identified under CERCLA.
1993: Weston completed Preliminary Assessment (PA) for USEPA. Concludes site investigation under CERCLA is warranted.
1993: Riverside collects groundwater samples from flume and reports arsenic at 15ppb.
1994: Residents complain about continued dumping and inaction by water board.
1994: Ralph Guyaux fully obtains title of landfill property.
Feb 1995: Internal water board memo outlines rationale for why water board decided to take no action again Guyaux.
Jun 1995: BEI conducted Site Investigation for USEPA. Recommends additional investigation.
Jul 1995: City of Colton obtains court order to require site be cleared and fenced.
Nov 1995: USEPA provides copy of site investigation showing that further assessment is recommended
Mar 1996: BEI conducts investigation for EPA. Reports As, Ba, Cd, Cr, Pb and Toluene above background.
May 1996: Water Board and USEPA do joint site visit.
Mar 1997: USEPA issues letter concluding the site does not qualify for listing on the Superfund (National Priorities) List, but cautions that arsenic, cadmium, chromium, lead, manganese, mercury and toluene are present above background levels, and forwards information to the California DTSC

(USEPA, 1997B) **(Appendix I)**.

EEC (2010) - This is a work plan to excavate and dispose of soil at three locations with lead impacts in the former main landfill area (Guyaux WDS). Confirmation sampling is proposed in the bottom of each excavated area (areas all 1.5' by 1.5' by 2' to 4' deep). The estimated soil removal volume is indicated as one to two drums. Work is reportedly being done under supervision of the SARWQCB. This document references a prior (2009) Phase II investigation done by EastStar Environmental Group Inc. A copy of the EastStar report was not found or provided to Leighton during completion of this Phase I assessment. EEC (2010) further reports that four groundwater monitoring wells had been installed in Sept 2009, and that the depth to groundwater was 85 to 94 feet (EEC, 2010).

SARWQCB (2011) - A March 23, 2011 letter from the SARWQCB commenting on an EIR for a proposed project involving placement of non-hazardous, treated soils over a 29-acre area to raise its elevation above the Santa Ana River floodplain. This 29 acre area is presumed to be all or partially on the subject Site. No records were found to indicate this project was completed (SARWQCB, 2011) (**Appendix I**).

DRAFT

City of Colton (2012) - This memorandum is from the Community Services Director to the City Manager. The memo concludes that minimal health risks exist to nearby residents from the landfill based on conversations with the SARWQCB and environmental engineers. Indicates soil testing by Soil Safe in 2010 did not find lead levels that meet hazardous thresholds. Mentions that Soil Safe installed 5 groundwater testing wells at the landfill that found trace VOCs, but not hazardous levels, and no discernable impacts to groundwater. Memo states the SARWQCB would like the landfill capped, but would not take any action to force owner to cap site unless contamination leaks into the groundwater (City of Colton, 2012) (**Appendix I**).

Ninyo & Moore (2016) - This work plan provided a summary of past site usage, summary of prior investigations, and a work plan to conduct trenching in the former main Guyuax landfill area (Guyaux WDS). The stated objective was to define the volume of soil containing wastes, and the potential hazardous substance-related characteristics of the waste-containing soils (Ninyo & Moore 2016) (**Appendix I**).

SBCDEH (2017) - Letter approving above Ninyo & Moore Work Plan (Ninyo & Moore 2016) with one condition. If waste is found that has potential to produce gas, then landfill gas probes should be constructed at the property boundary adjacent to the homes (SBCDEH, 2017) (**Appendix I**).

Ninyo & Moore (2017A) - This investigation covered the main landfill area (Guyaux WDS). The objective was to delineate the extent of wastes, their thickness and chemical characteristics, and to provide an estimate of the in-place volume of buried wastes. The scope of work included: a review of historical aerial photographs to preliminarily assess extent of wastes, completion of a geophysical survey, and trenching and sampling from 22 exploratory trenches in the main landfill area. Waste debris was detected in all 22 trenches at depths ranging from the surface to 19 feet. Encountered wastes included metal disks, metal slag, concrete, brick, insulations, tile, wood, porcelain, asphalt and plaster molds. A drum and dry car battery were also reported. Buried wastes were reported to extend off site (beyond main landfill) beneath the adjoining north residences, as well as west of the main landfill area beneath an adjoining industrial property. The vertical extent of wastes was delineated in 13 trenches, but could not be pursued in 9 trenches due to trench instability. The lateral extent of the wastes is reported to have generally corresponded with that which was assumed, based on their prior review of historical aerial photographs, as well as the subsequent geophysical survey results.

Sample analyses revealed elevated Arsenic, Cadmium, Chromium, Lead, Nickel and Thallium. Some waste samples contained concentrations indicating they were California hazardous wastes. Lead was the contaminant of greatest concern, exceeding both residential and industrial screening goals in large numbers of samples. No significant TPH was reported in the analyzed soil samples. Six samples were analyzed for PCBs and only one sample was reported to contain one PCB isomer. This one isomer detection is reported to have exceeded acceptable regulatory screening goals. It would appears this one sample results is not indicative of larger scale soil conditions. No detectable VOCs, Semi-VOCs or Organochlorine Pesticides (OCPs) were reported in any of the analyzed

DRAFT

samples. A total of 105,000 cubic yards of wastes was estimated for the investigated area (main former landfill area).

Recommendations included:

- Submitting the Phase II report to the Local Enforcement Agency (LEA) (San Bernardino County Dept. of Environmental Health) and Calrecycle;
- Notifying the LEA of suspected wastes under the adjoining properties; Covering the buried wastes and restricting public access to the landfill area;
- Notifying LEA of the sampling results off-site to the north.

The report also concluded the LEA may require a landfill gas investigation and a resumption of quarterly inspections (Ninyo & Moore, 2017A) (**Appendix I**).

Ninyo & Moore (2017B) - The objective of this investigation was to further evaluate the lateral extent of buried wastes by reviewing historical aerial photos and topographic maps, especially to the north and west of the areas previously investigated by the prior Phase II trenching. The historical review concluded that:

- Several houses at the southern extent of Florez and Fernando Streets are likely underlain by wastes
- Wastes likely extend west of the main landfill beneath the adjoining northwest and west property
- Some dumping may have also occurred between 2005 and 2016 along the southwestern edge of the Griffin parcel (i.e. the subject Site, APN -26)

(Ninyo & Moore, 2017B) (**Appendix I**).

4.3 Other Local/Regional Regulatory Agency Contacts

Leighton staff researched other reasonably ascertainable, regulatory agency records. The results are summarized below:

San Bernardino County Fire Department, Hazardous Materials Division (SBCFD)
The SBCFD was petitioned for copies of any environmental records associated with the Site APNs. They responded with a letter indicating no records were found. A copy of the records request and response is provided in **Appendix F**.
State of California Dept of Toxic Substances Control (DTSC)

DRAFT

The DTSC Cypress and Chatsworth offices were contacted with a request to search for any records under the four site APNs. The DTSC Chatsworth office responded with a letter indicating no records were found. The DTSC Cypress office responded and attached a two-page letter, dated October 15, 1996, from DTSC to Ralph Guyaux. This letter indicates the landfill case was referred to them by the USEPA, and that DTSC listed it in the Calsites database. The letter also indicates that additional investigation and/or remediation is required, but leaves it to the addressee (Mr. Guyaux) to apply for oversight via their voluntary cleanup program. The above discussed DTSC correspondences are provided in attached **Appendix F**.

DTSC Envirostor Database (Envirostor)

Site

- A review of the DTSC Envirostor database revealed no listings for the Site.

Off-Site

Closest listed facilities include:

- **Griffin Wheel Dump (1280 Jefferson Ln.)** - This facility is adjoining approximately 250 feet west of the Site. Various phases of assessment have been completed under oversight of USEPA and then DTSC at this facility between the late 1980s and 2013. It remains an active site cleanup case with DTSC lead oversight. In 2013, the USEPA confirmed they required no further action under CERCLA.

  At this facility, a former slag / lead waste disposal area was investigated in the 1990s, and the wastes were then stabilized with cement and buried in the southwestern corner of the facility (farthest corner from Site). In 1994, the SARWQCB issued a letter indicating the disposal area poses no further threat to water quality. DTSC continued to investigate this site because prior investigations addressed only the groundwater threat, and not other human health issues. In 2011, DTSC completed a Site Screening Assessment. This assessment included a summary indicating the former untreated wastes contained elevated levels of Pb and Zinc, as well as asbestos. They report that groundwater was impacted with As, Cd, Pb, and VOCs (Toluene, PCE, TCE). They also reported that groundwater depths were previously 16 to 35 feet deep, and the predominant groundwater flow was to the southwest (i.e. away from subject Site). DTSC concluded further investigation may be required to address human health issues. It is our judgment there is a low to low-moderate likelihood wastes released at this facility have created a REC on the subject Site; however, historical reports have indicated wastes from this facility were actually dumped at the uncontrolled landfill area of the subject Site (Guyaux WDS) decades ago. Dumping of wastes from the Griffin Wheel facility on the subject Site is considered a concern for the Site. Copies of key records from this Griffin Wheel Dump case are presented in **Appendix F** (Envirostor, 2019).

- **So Cal Gas / Colton 1 (Fogg St) MGP** - This facility is approximately 950 feet west- northwest of the subject Site. It was formerly used as a manufactured gas plant (MGP). Investigations at this site detected PAHs and diesel fuel impacts. Soil was remediated by excavation, and groundwater continued to be monitored. A removal action report was approved by DTSC in 2008. Envirostor indicates a plan to abandon groundwater monitoring wells is being reviewed by DTSC. The case is currently listed as having an active Operations & Maintenance program. It is our judgment there is a low likelihood that wastes released at this facility have created a REC on the subject Site.

DRAFT

State of California Regional Water Quality Control Board, Santa Ana Region (SARWQCB)

The SARWQCB was petitioned to search and provide records for the subject site under the current APNs, the Guyaux landfill name and a water board case no. The results were as follows:

Site

The SARWQCB indicated all records related to the Site exist on the Geotracker database website (discussed below). Their response in this regard is provided in **Appendix F**.

Off-Site

Cooley Ranch Landfill - A file was reviewed for the Cooley Ranch Landfill, which was indicated by Geotracker to be in close proximity to the Site. For several years in the mid-1960s, Class III rubbish/trash was dumped along the eastern levee (opposite side of river from Site) of the Santa Ana River between Mount Vernon Avenue and the railroad tracks that run just west of the Site (along an approximate 1.5 miles stretch). At some time later (likely in the late 1980s), the water board required a groundwater monitoring program be implemented at this disposal site. In 1995, the SARWQCB issued a letter to County of San Bernardino Solid Waste Management indicating "we agree that the landfill does not appear to be degrading water quality in its vicinity, nor does it seem likely that it will do so in the future." The letter also granted permission to discontinue groundwater monitoring. In 2010, San Bernardino County Waste Management reported four groundwater monitoring wells associated with this landfill had been decommissioned. Based on the location of this landfill relative to the subject Site, its location on the opposite side of the Santa Ana River, and water board conclusions regarding the groundwater monitoring information, it is our judgment this former landfill is unlikely to have impacted the Site with a REC. Selected key documents from this nearby case are provided in **Appendix F**.

DRAFT

State of California Water Resources Control Board GeoTracker Database (GeoTracker)

The State Water Resources Control Board GeoTracker website was reviewed for listed facilities within a 0.25 mile radius of the Site. Facilities potentially on the GeoTracker website include: Leaking USTs, Other Cleanups, Land Disposals, Military, WDR, Permitted USTs, DTSC Cleanup & Hazardous Waste Permit facilities. Geotracker indicated the following notable facilities:

Site

- **Guyaux Landfill, Flores and Fernando Streets, Colton** - This case is within the subject Site limits. More relevant documents found within Geotracker have previously been summarized and discussed above in **Subsection 4.2.5** (**Other Reports**).

Off-Site

- **Griffin Wheel (Plexco) (1280 Jefferson Lane, Colton, CA)** – This facility is adjoining approximately 250 feet west of the Site. It is listed as a land disposal case which was closed in 1994. This case was discussed in more detail above in the **Envirostor** portion of this subsection.

- **Arrowhead Drinking Water Co. (130 Fogg St, Colton, CA)** - This facility has a closed leaking UST case. It was located approximately 250 feet west of the subject Site. A 10,000 gallon diesel/gasoline tank was removed in 1994. Eighty-six tons of petroleum fuel impacted soil are reported to have been removed to a depth of 17 feet. Three groundwater monitoring wells were installed at the site, indicating a flow direction to the north-northwest (in mid-1990s). Groundwater is reported to have ranged between 30 and 50 feet beneath this facility. Groundwater is reported to have had no significant impacts with petroleum fuel compounds. The LUST case was closed in June 1998. It is our judgment there is a low likelihood this LUST case has impacted the subject Site with a REC.

- **Morton International (1231 Lincoln Avenue, Colton, CA)** – This is a closed cleanup case managed by the SARWQCB. It is located approximately 1,100 west of the Site. Various phases of investigation completed at this facility between 1983 and 1996 detected VOC and SVOC impacts to soil and groundwater from leaking USTs and other solvent releases. Remediation via Soil Vapor Extraction (SVE) was completed between 2003 and 2005, and groundwater monitoring continued until 2010. Two groundwater zones were reported beneath this facility (one monitored by wells screened 6 to 37 feet deep, and one monitored by wells screened 43 to 60 feet deep). The predominant groundwater flow is reported to have been southwest. In March 2011, this case was closed by the SARWQCB. It is our judgment there is a low likelihood this case has impacted the subject Site with a REC.

(Geotracker, 2019)

National Pipeline Mapping System

National Pipeline Mapping System (NPMS) – A review of data from the NPMS website revealed no reported accidents, incidents, gas or hazardous liquid pipelines within 0.25 miles of the Site (NPMS, 2019).

South Coast Air Quality Management District

South Coast Air Quality Management District (SCAQMD) – An on-line records search was completed for the Site using the SCAQMD F.I.N.D database. No records were found (SCAQMD, 2019).

DRAFT

4.4 Historical Use Information

Following is a summary of our review of records regarding historical usage of the Site and adjoining properties, as this information pertains to the potential for environmental concerns. Areas of the site are referred to by their abbreviated APNs (ex. APN 0163-362-26 as APN -26) (see **Figure 2**).

Info Type	Year	Source	Summary of Results
Topo Maps	1896 1898 1901 1938 1943 1954 1967 1973 1975 1980 2015	ERIS	• 1896-1901: Maps show no evidence of development on or adjoining the Site. Santa Ana (SA) River channel is indicated much further north than at present day, and runs directly through the Site. Present day RR tracks west of site are visible. Note: site limits indicated on maps are further NE of their actual location. • 1938-1954: Maps shows no evidence of development on the Site. Florez and Fernando Streets are visible. SA River channel runs through the Site. • 1967-2015: Maps show no evidence of development on the Site. SA River channel has shifted much further south (away from Site)
Aerial Photos	1930 1938 1948 1949 1953 1954 1959 1966 1968 1975 1980 1985 1989 1995 2002 2004 2005 2006 2009 2010 2012 2016	ERIS & EDR	• **1930**: The Site is mostly active SA River channel and wash. No obvious development or dumping visible. Likely cars are visible in at northern portion of current APN-12 between Florez & Fernando Streets (parked along flowing river channel). Florez and Fernando Streets are dirt roads with only scattered development along them. Florez Street does not extend as far south as present day. Adjoining properties largely undeveloped, with possible agriculture adjoining NW. • **1938, 1948, 1949**: Similar to 1930 photo. No obvious development on Site. 1949 photo shows a small "U" shaped road connecting southern end of Florez & Fernando Streets. This may be first sign of access for dumping in the central portion of the Site. Adjoining properties similar to 1930 photo. • **1953, 1954:** 1954 photo quality very poor. Northern portions of Site show greater vegetation cover (less clean and loose river wash sand) and may be more accessible for dumping. Central northern portion of Site (Guyaux WDS area) appears to be used more for storage of materials, though difficult to determine vs. vegetation. The "U" shaped road connecting south ends of Florez & Fernando Streets appears to be foot trail sized only? • **1959**: No obvious Site development with structures. Area of Guyaux WDS appears to be disturbed and covered with debris. Some debris may also be visible in NW corner of present APN -26. Florez & Fernando Streets are still dirt roads, but Florez appears to extend further south (closer to present day southern limit). Large Industrial warehouse (present-day Cascade @ 1280 S. Jefferson Ln) is first visible southwest of Site.

DRAFT

Leighton

Aerial Photos	1930 1938 1948 1949 1953 1954 1959 1966 1968 1975 1980 1985 1989 1995 2002 2004 2005 2006 2009 2010 2012 2016	ERIS & EDR	• **1966**: No obvious Site development with structures. There is a highly defined active water channel flowing through many portions of Site further to the north than in 1950s photos. Evidence visible of surface disturbance & dumping in main Guyaux WDS, and especially the NW corner of present APN-12. Evidence of some lesser surface dumping also in NW portion of present APN-26. Adjoining properties are largely undeveloped, except scattered residential to the north. Florez and Fernando Streets now appear paved. • **1968**: No obvious Site development with structures. Main Guyaux WDS appears mostly covered with large darker pile of dumped material forming the core of present day, elevated Guyaux WDS area. • **1975**: Photo quality very poor. Main Guyaux WDS appears covered with debris, including lighter colored materials (plaster/porcelain?) in SW and NE portions of main WDS. • **1980, 1985, 1989, 1995:** Guyaux WDS appears largely developed similar to present day conditions with evidence of built up debris. Florez Street has been extended further south. A small road is visible (NW-SE) across NE corner of present APN-26; may be used for minor surface dumping. Adjoining properties are largely undeveloped, except residential to the north. • **2002, 2004, 2005, 2006, 2009, 2010, 20112, 2016**: No obvious Site development with structures. Site appears similar to its present day condition. By 2004, the property adjoining north of APN-26 is fully developed and occupied with storage yard and small warehouses. Residential to the north of Site. All other adjoining are undeveloped.
City Direct-ories	1961 to 2018	ERIS	No historical city directory listings of environmental concern were found. The only listings in close proximity to the Site were for individuals living on S. Florez and S. Fernando Streets.
Sanborn Maps	N/A	ERIS	No Sanborn Fire Insurance Map coverage is reported for the Site.

Generalized Summary of Historical Review - From at least 1896 to the early 1930's, there is no evidence of Site development or significant usage. The Site is mostly occupied by active Santa Ana River channel during this period, and the present day railroad tracks (west of Site) exist. In the 1930's, Florez & Fernando streets exist as dirt roads in slightly shorter versions (at south ends) than present-day.

In the 1940's and 1950's there appears to be a small road connecting south ends of Florez and Fernando street (access for dumping?), more vegetation on large areas of the Site, and more usage (storage of materials) of the northern portion of present APN -12 (Guyaux WDS area). There continues to be no developed surface structures (i.e. buildings) during this period.

In the 1960's and 1970's the Guyaux WDS (northern portion of present APN -12) is mostly covered with large darker piles of dumped material, and light-colored materials (plaster/porcelain?) forming the core of the present-day elevated WDS. There continues to be no developed surface structures (i.e. buildings) during this period. Adjoining north Florez and Fernando Streets are now paved. It is also noted that a historical aerial photo review by Ninyo and Moore indicated likely dumping near the northern portion of present APN-26 (Griffin Parcel) in the 1960's, based mainly on observed dirt roads and apparent surface disturbances (Ninyo & Moore, 2017B).

DRAFT

In the 1980s and 1990s, the Guyaux WDS appears similar to present-day conditions with evidence of built up debris. Florez Street has been extended further south. A small road is visible (NW-SE) across NE corner of present APN -26, and may be used for minor surface dumping. Adjoining properties are largely undeveloped, except the residential to the north. There continues to be no developed surface structures (i.e. buildings) during this period.

In the 2000's to present, the Site appears similar to its present day condition. By 2004, the property adjoining north of APN-26 is fully developed and occupied with storage yard and small warehouses. Residential exists to the north of Site. All other adjoining properties are undeveloped. It is also noted that a historical aerial photo review by Ninyo and Moore indicated likely surface dumping near the southwest corner of APN-26 (Griffin Parcel) between 2005 and 2016 based on surface disturbances (Ninyo & Moore, 2017B).

Summary Conclusion - Based on the above discussed historical review, and other background knowledge of the Site, a former landfill (Guyaux WDS) has been identified in the northern portion of present APN -12. The identified Guyaux WDS is currently considered a CREC (Controlled Recognized Environmental Condition); however, this issue is discussed further below in **Section 9.0**. A prior aerial photo review also identified potential surface dumping near the southwest corner of present APN -26 (Griffin parcel). This is considered a potential REC for the Site, and is also further discussed below in **Section 9.0**.

Copies of selected documents used to assess historical Site and adjoining property usages (i.e. topographic maps, aerial photos, city directory listings, Sanborn map report) are provided in **Appendix G**.

DRAFT

5.0 SITE RECONNAISSANCE

5.1 Methodology and Limiting Conditions

On April 17 2019, a representative of Leighton Consulting conducted a reconnaissance–level assessment of the Site. The Site reconnaissance consisted of observing and documenting existing conditions on the Site and adjoining properties. Parcels were observed by driving throughout many of the Site's dirt roads, as well as walking over other areas not accessible by vehicle.

The most significant limitations to the site reconnaissance were:

- The large size of the Site made a highly detailed review less practical.
- Weed coverage (approximately one to two feet high) limited the ability to observe the ground surface at the Site.
- Homeless encampments limited observations in selected areas (i.e. not approached or entered due to security concerns).

Photographs were collected during the site reconnaissance. For reference, the locations at which photos were collected are shown on attached **Figure 2**, while the actual photos themselves are provided in **Appendix B**.

5.2 General Property Setting

The Site is located in a vicinity generally occupied by single-family residences (to the north) and industrial/commercial development (to the west). The areas east and south of the Site are vacant land along the Santa Ana River channel.

5.3 Exterior and Interior Observations

No surface structures (i.e. buildings) exist on the Site; therefore, no interior observations were possible. The subject Site is vacant land along and within the Sana Ana River wash. Portions of the Site are raised terraces above the majority of the remaining Site. These raised terrace areas are described as follows:

- Northwestern Portion of APN 0163-362-26
  Approximately 10 feet above most of Site (**Photo 13 - Appendix B**).
- Northern Portion of APN 0163-362-12
  Approximately 10-12 feet above most of Site. Reported former uncontrolled landfill area (Guyaux WDS) (**Photo 13 - Appendix B**).

DRAFT

- Northwestern Portion of APN 0163-381-02
  Approximately 10-15 feet above most of Site. Probable natural river terrace area (**Photo 14- Appendix B**).

Attached **Photo nos. 1, 15 & 16** (**Appendix B**) show other views of lower elevation areas of the Site.

Provided below are Site observations in regards to potential environmental concerns or sources of RECs:

5.3.1 Hazardous Substances, Drums, and Other Chemical Containers

No large quantities of likely hazardous substances, including drums, were observed on the Site.

5.3.2 Storage Tanks

No evidence of above or underground storage tanks (USTs) was observed on the subject site.

5.3.3 Polychlorinated Biphenyls (PCBs)

No evidence of likely sources were observed on the Site; though the former uncontrolled landfill could be a source of PCB impacted soils. As discussed above in **subsection 4.2.5** (**Ninyo and Moore, 2017A**) one soil sample collected from a trench in the former landfill area was reported to contain one PCB Aroclor above acceptable screening levels. This one sample does not appear to be indicative of larger scale conditions in the landfill area.

PCBs were once used as industrial chemicals whose high stability contributed to both their commercial usefulness and their long-term deleterious environmental and health effects. PCBs can be present in coolants or lubricating oils used in older electrical transformers, hydraulic systems, and other similar equipment. In 1979, the USEPA generally prohibited the domestic manufacture of PCBs in electrical capacitors, electrical transformers, vacuum pumps, hydraulic pumps, and gas turbines.

5.3.4 Waste Disposal

As discussed in other portions of this report, the northernmost portion of APN 0163-362-12 is a former uncontrolled landfill (Guyaux WDS). No other obvious visual evidence of systematic, larger-scale dumping of wastes was observed on the Site.

Observations in the former uncontrolled landfill indicated discolored soil, slag, metallic debris, brick, white plaster-like material and wood. Many small animal burrows and larger exposed subsurface voids were also observed, also indicating buried debris. Attached **Photo nos. 17-25** (**Appendix B**) show dumping evidence in the former uncontrolled landfill area.

DRAFT

5.3.5 Dumping

Aside from the former uncontrolled landfill (in northern portion of APN 0163-362-12) several scattered areas of minor dumping were observed in other areas of the Site. Attached **Photos nos. 8 and 26-28** (**Appendix B**) show some of these dumping areas. The dumped materials appear to be mostly inert debris, tires, and one empty waste oil container.

5.3.6 Pits, Ponds, Lagoons, Septic Systems, Wastewater, Drains, Cisterns, and Sumps

No evidence of pits, ponds, lagoons, septic systems, wastewater, drains, cisterns or sumps were observed on the Site.

5.3.7 Pesticide Use

No current evidence of pesticide use was observed at the subject site.

5.3.8 Staining, Discolored Soils, Corrosion

No significant unusual staining, discolored soils, or corrosion were observed on the Site, except in the uncontrolled landfill area (discussed above in **subsection 5.3.5**).

5.3.9 Stressed Vegetation

Some of the vegetation in the former uncontrolled landfill area may be stressed due to underlying buried debris; however, no other evidence of stressed vegetation was observed on the remainder of the subject site.

5.3.10 Unusual Odors

No unusual odors were detected at the subject site.

5.3.11 Onsite Wells

Three groundwater monitoring wells were observed on and near the subject site. The approximate locations of these monitoring wells are shown on attached **Figure 2**. Attached **Photo Nos. 29-31** (**Appendix B**) show some of these wells.

5.3.12 Other Non-Scope Issues

No surface structures exist on the site; therefore, the presence of significant amounts of mold or lead-based paint are unlikely. Some lead-based paint may exist on scattered dumped debris, or on buried debris; however, this is unlikely to be considered a REC.

No surface structures exist on the site; therefore, the surface presence of asbestos containing materials (ACMs) is unlikely. Some ACMs could be buried in the uncontrolled landfill. As discussed above in **section 4.2.5** (**USEPA 1997A / Bechtel 1995**), some reports have indicated wastes from the Griffin Wheel Company were buried at the Guyaux WDS, and a

DRAFT

report regarding wastes at the Griffin Wheel dump indicated these wastes contained asbestos (**section 4.3 Envirostor**). Additionally, there may be buried building demolition debris that is considered ACM. While the possible presence of asbestos containing wastes in the Guyaux WDS area of the Site is considered a likely REC; it noted that no environmental regulatory agency involved, to date, with the Guyaux WDS (USEPA, SARWQCB, DTSC or SBCDEH) has taken enforcement action in regards to potential asbestos. In addition, the presence of buried ACMs is likely not a concern if these ACMs remain covered and undisturbed.

6.0 INTERVIEWS

Leighton Consulting conducted interviews with persons identified as having knowledge of current or past subject Site usage/conditions. These interviews are conducted either orally or in the form of a written questionnaire. The written questionnaire responses are included as **Appendix C**.

6.1 Interview with Owner

Mr. Victor Ortiz, Engineer for City of Colton, completed the Phase I ESA Owner/Site Contact Interview Form and returned it to Leighton Consulting. Ms. Ortiz indicated the Site is, and has been, vacant.

Mr. Ortiz also indicated he is aware of prior usages of concern on the Site, as reflected in prior environmental reports provided for Leighton. He indicated he has no knowledge of past or current violations of environmental laws, or pending, threatened or past litigation re. environmental issues. He indicated it is unknown if there are environmental concerns with adjacent or nearby properties.

6.2 Interview with Property/Property Manager

Mr. Ortiz was also identified as a person familiar with management of the property. The questionnaire completed by Mr. Ortiz revealed no issues of potential environmental concern not identified through other sources discussed in this report.

6.3 Interviews with Occupants

The site is not occupied.

6.4 Interviews with Local Government Officials

Leighton did not interview employees with local government agencies.

6.5 Interviews with Others

Leighton did not conduct any other additional interviews, except as indicated above in Section 3.0 (completion of User questionnaire).

DRAFT

7.0 VAPOR ENCROACHMENT

A vapor encroachment screening was completed in general accordance with ASTM Standard Guide E2600-10. Our modified Area of Concern (AOC) is defined as follows:

Direction Relative to Site	AOC - VOC Vapors	AOC - Petroleum HC Vapors
Up Gradient Source	1,760 feet	520 feet
Cross Gradient Source	365 feet	165 feet
Down Gradient Source	100 feet	100 feet

The Phase I information compiled and discussed above revealed no likely sources of vapor within the modified Area of Concern, except for the Guyaux WDS located on the Site itself. The other potential vapor sources discussed are either out of the modified AOC, or evidence was not found indicating a high certainty of vapors at these sources.

The on-Site Guyuax WDS could be a source of VOCs, as well as other landfill gases, though the potential may be lower, than for other types of landfills, due to the reported inert nature of buried debris. Further investigation for the presence of VOCs or landfill associated gases is recommended if this portion of the Site is to be developed with any surface structures (i.e. buildings, etc.) and regularly occupied. Additionally, if buried wastes are to be significantly disturbed by potential future construction activities, a certified industrial hygienist should be consulted regarding required monitoring for health and safety issues (both vapor and particulates/fibers).

DRAFT

8.0 FINDINGS

Leighton Consulting performed a Phase I ESA for the subject property in Colton, California (**Figure 1**). The Site consists of four APNs including: 0163-362-26 & -12, and 0163-381-01 & -02 (**Figure 2**). The property Owner / Manager is the City of Colton. The Phase I ESA is being completed to support CEQA issues related to development of the Site as a regional Soccer Park.

8.1 Site

Current Conditions

The Site is currently vacant, undeveloped land approximately 300 to 500 feet from the Santa Ana River channel. The northern portion of APN -12 was used previously as an uncontrolled landfill, and is currently fenced (Guyaux Waste Disposal Site (WDS)). All other areas of the Site are unfenced and publicly accessible via dirt roads.

Groundwater beneath the Site likely flows predominantly toward the northwest to southwest, is currently greater than 105 feet deep, but has likely fluctuated greatly over the decades, and been as shallow as 16 feet or even less.

Env. Liens/ AULs

Leighton found no environmental liens or Activity and Use Limitation (AULs) in connection with the Site.

Standard Environmental Records

A search of selected, environmental and government databases revealed the Site is listed (under the "Guyaux Landfill" name) in various databases, all related to the landfill and associated, historical investigations/assessments done per the USEPA and SARWQCB.

Prior Environmental Reports

Historical environmental documents were mostly dated between 1995 and 2017. Key documents indicate:

- Documents from the 1990s indicate non-compliance by Ralph Guyaux (operator of Guyaux landfill) with many of their requests.
- In 1995, the SARWQCB concluded they are not pursuing enforcement action against the Guyaux WDS site because the landfill does not appear to have significant impacts to groundwater; the landfill is well graded and drains well; the landfill has received no waste for 12 years and most waste have been in place 30+ years; and a former groundwater study (RIX study) already provided info, so further investigation is likely to achieve little.
- In 1997, the USEPA concluded the Guyaux WDS does not qualify for the Superfund National Priorities List, but cautions that arsenic, cadmium, chromium, lead, manganese, mercury and toluene are present above background levels (info also sent to DTSC).
- In 1996 DTSC put the Guyaux WDS on the Calsites list, but left it up to the former operator to (Mr. Ralph Guyaux) to apply for oversight via their voluntary cleanup program (**Section**

DRAFT

4.3 – DTSC). The review of DTSC and Envirostor records indicate no further action was taken by DTSC.

- A 2012 Internal City of Colton Memo concludes:

  - Minimal health risks exist to nearby residents from the Guyaux WDS based on conversations with the SARWQCB and environmental engineers;
  - Soil testing done in 2010 (by Soil Safe) did not find lead levels that meet hazardous thresholds;
  - Soil Safe installed 5 groundwater testing wells at the landfill that found trace VOCs, but not hazardous levels, and no discernable impacts to groundwater; and
  - The SARWQCB would like the Guyaux WDS capped, but would not take any action to force the owner to cap this area unless contamination leaks into the groundwater.

- A 2017 Phase II Site Assessment of the Guyaux WDS portion of the Site indicates:

  - The objective was to delineate the extent and character of buried wastes;
  - 22 exploratory trenches were excavated and sampled in the main landfill area;
  - Waste debris was detected in all 22 trenches at depths ranging from surface to 19';
  - Wastes included metal disks, metal slag, concrete, brick, insulations, tile, wood, porcelain, asphalt and plaster molds;
  - Wastes extend off site (beyond main landfill) beneath the adjoining north residences, as well as west of the main landfill area beneath an adjoining industrial property;
  - Samples revealed elevated Arsenic, Cadmium, Chromium, Lead, Nickel and Thallium, some at concentrations indicating they were California hazardous wastes. Lead was the contaminant of greatest concern, exceeding both residential and industrial screening goals in large numbers of samples. No significant TPH was reported in the analyzed soil samples. Only one sample was reported to contain one PCB Aroclor. No detectable VOCs, Semi-VOCs or Organochlorine Pesticides (OCPs) were reported in any of the analyzed samples;
  - A total of 105,000 cubic yards of wastes was estimated for the investigated area (main former landfill area);
  - Recommendations included: covering the buried wastes and restricting public access to the landfill, notifying the LEA (SBCDEH), and informing the City of Colton that the LEA may require a landfill gas investigation and quarterly inspections.

- A 2017 Historical Aerial Photo Review reports:

  - Several houses at the southern extent of Florez and Fernando Streets are likely underlain by wastes;
  - That buried wastes likely extend west of the main landfill beneath the adjoining northwest and west property; and
  - That some dumping may have also occurred between 2005 and 2016 along the southwestern edge of the Griffin parcel (i.e. APN -26).

Historical Site Usage

From at least 1896 to the early 1930's, there is no evidence of Site development or significant usage. The Site is mostly occupied by active Santa Ana River channel during this period. In the 1940's and 1950's there appears to be a small road connecting the south ends of Florez and

DRAFT

Fernando streets (access for dumping?), and usage of the northern portion of present APN -12 (Guyaux WDS area) for storage of materials. In the 1960's and 1970's the Guyaux WDS (northern portion of present APN -12) is mostly covered with large darker piles of dumped material, and light-colored materials (plaster/porcelain?) forming the core of the present-day elevated WDS. In the 1980s and 1990s, the Guyaux WDS appears similar to present-day conditions with evidence of built-up debris. A small road is visible (NW-SE) across NE corner of present APN -26, and may be used for minor surface dumping. In the 2000's to present, the Site appears similar to its present day condition.

It is also noted that a historical aerial photo review by Ninyo and Moore indicated likely dumping near the northern portion of present APN-26 (Griffin Parcel) in the 1960's, and likely surface dumping near the southwest corner of APN-26 (Griffin Parcel) between 2005 and 2016, based mainly on observed dirt roads and apparent surface disturbances,.

Site Reconnaissance
A site reconnaissance revealed the following items of potential concern:

- The northernmost portion of APN -12 is a former uncontrolled landfill (Guyaux WDS). Observed materials include discolored soil, slag, metallic debris, brick, white plaster-like material and wood.

- No evidence of likely surface sources of PCBs were observed on the Site, though the landfill debris could be a source of PCB impacted soil. A prior investigation indicated one soil sample collected from a trench in the former landfill area was reported to contain one PCB Aroclor above acceptable screening levels. This single sample result does not appear to be indicative of larger scale conditions.

- Three groundwater monitoring wells were observed on and near the subject site (**Figure 2**).

- Some asbestos containing materials (ACMs) could be buried in the uncontrolled landfill. As discussed above in **section 4.3** (**Envirostor**), reports have indicated wastes from the Griffin Wheel Company were buried at the Guyaux WDS, and a report regarding wastes at the Griffin Wheel dump facility indicated these wastes contained asbestos. Additionally, there may be buried building demolition debris that is considered ACM.

Vapor Encroachment
The on-Site Guyaux WDS may be a source of VOCs, as well as methane or other landfill gases, though the potential may be lower, than for other types of landfills, due to the more inert nature of reported buried debris.

8.2 Off-Site

The general Site vicinity is occupied by single-family residential to the north, the River wash to the east and south, and commercial-industrial to the west.

DRAFT

A search of selected, environmental and government databases revealed numerous facilities in the site vicinity; however, it is our judgment there is a low likelihood any of these nearby listings indicated evidence of a likely REC on the subject Site.

The review of historical Site and nearby property usages revealed no evidence to indicate that adjoining or near-by properties are likely to have impacted the subject site with a REC, with the exception of potential wastes brought from these facilities to the Guyaux WDS.

The adjoining site reconnaissance revealed no obvious visual evidence to indicate they have likely impacted the subject Site with a REC.

8.3 Data Gaps

The following data gap was identified by Leighton Consulting:

- The User Questionnaire did not include an answer regarding whether the purchase price of the Site reflecting its fair market value. This is considered a data gap of moderate significance.

9.0 OPINION

The following Controlled Recognized Environmental Condition (CREC) was identified for the Site:

- A review of historical reports and correspondences through 2012 indicate the Site Guyaux WDS in the northern portion of present APN -12 is a CREC. According to ASTM E1527-13, CRECs are defined as "*a REC resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority, with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls.*" Prior reviews of the Guyaux WDS by USEPA and SARWQCB (through 2012) resulted in no further action would be required. While DTSC was notified of this WDS in the mid-1990s, they also have taken no further action.

The following Recognized Environmental Condition (REC) were identified for the Site:

- Prior aerial photo reviews (Ninyo & Moore 2017B) identified potential dumping near northern portion and southwest corner of present APN -26 (Griffin parcel). The nature and extent of these possible dumping areas should be further assessed.

- Some asbestos containing materials (ACMs) could be buried in the uncontrolled landfill. As discussed above in **section 4.3** (**Envirostor**), reports have indicated wastes from the Griffin Wheel Company were buried at the Guyaux WDS, and a report regarding wastes at the Griffin Wheel dump facility indicated these wastes contained asbestos. Additionally, there may be buried building demolition debris that is considered ACM. While the possible presence of asbestos containing wastes in the Guyaux WDS area of the Site is considered a likely REC; it noted that no environmental regulatory agency involved, to date, with the Guyaux WDS (USEPA, SARWQCB, DTSC or SBCDEH) has

DRAFT

taken enforcement action in regards to potential asbestos. In addition, the presence of buried ACMs is likely not a concern if these ACMs remain covered and undisturbed. If buried wastes are to be significantly disturbed by potential future construction activities, a certified industrial hygienist should be consulted regarding possible monitoring for health and safety issues (vapor and particulates/fibers).

- The on-Site Guyuax WDS may be a source of VOCs, as well as other landfill gases, though the potential may be lower, than other types of landfills, due to the more inert nature of reported buried debris. These potential vapor sources are a REC. Further investigation for the presence of VOCs or landfill gases is recommended if the site is to be developed with any surface structures (i.e. buildings) and regularly occupied. If buried wastes are to be significantly disturbed by potential future construction activities, a certified industrial hygienist should be consulted regarding possible monitoring for health and safety issues.

- Prior regulatory agency recommendations regarding the Site have indicated the Guyaux WDS portion the Site should be capped and graded to divert drainage. If buried wastes are to be significantly disturbed by potential future construction activities, a certified industrial hygienist should be consulted regarding possible monitoring for health and safety issues.

10.0 CONCLUSIONS

We have performed a Phase I ESA in conformance with the scope and limitations of ASTM E1527-13 for the property in Colton, California. Any exceptions to, or deletions from, this practice are described in Section 1.5 of this report. This assessment has revealed evidence of a CREC, and RECs as described and qualified above in **Section 9.0**.

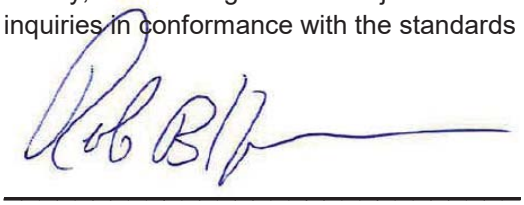
11.0 DEVIATIONS

Leighton Consulting did not significantly deviate from or alter the scope of work, as defined in Section 1.3 of this report. One data gap was identified were judged to be of moderate significance.

12.0 QUALIFICATIONS OF ENVIRONMENTAL PROFESSIONALS

12.1 Corporate

Leighton Consulting is a California corporation, providing geotechnical and environmental consulting services throughout California. We are solely a consulting firm without interests in real property other than our offices in Southern California. We provide professional environmental consulting services including application of science and engineering to environmental compliance, hazardous materials/waste assessment and cleanup, and management of hazardous, solid and industrial waste. Phase I Environmental Property Assessments are a part of this practice area and have been conducted by us.



DRAFT

12.2 Individual

The qualifications of the Associate Geologist and the other Leighton Consulting environmental professionals involved in this Phase I ESA meet the Leighton Consulting corporate requirements for performing Phase I ESAs as specified by ASTM E1527-13.

12.3 Environmental Professional Statement

I declare that, to the best of my professional knowledge and belief, I meet the definition of Environmental professional as defined by §312.10 of 40 CFR Part 312. I have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the subject site. I have developed and performed all the appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

Robert B. Hansen
Associate Environmental Geologist

APPENDIX C

Phase I Owner and User Questionnaires and Client Supplied Documentation

Leighton

Leighton

Phase I ESA Users Questionnaire

Project Name: City of Colton Soccer Complex

Complete and Correct Address(es) of the Property and APN(s):

APN 0163-38-101; 163-38-102; 0163-36-212

User Company Name:	**User Name/Title:**
City of Colton	Deb Farrar/Community Services Director

User Phone/Email: (909) 370-6157 / DFarrar@coltonca.gov

Interviewee Name and Relationship to Project:

Victor Ortiz, P.E. / Mark Tomich, A.I.C.P. - employees of the Project owner

Site Owner: City of Colton

Reason Phase I is required:

Site will be developed into a Soccer Field Complex

Type of property:

Vacant Land

Type of property transaction (e.g., Sale, purchase, exchange):

Not Applicable

Any scope of services beyond the ASTM Practice E 1527:

Not aware of any beyond the ASTM Practice E 1527

All Parties that will rely on the Phase I report:

City of Colton, project consultants

Name and Contact Information for Site Contact:

Deb Farrar/(909) 370-6157

Any special terms or conditions:

None

Any other pertinent knowledge or experience with the property (e.g., prior reports, documents, correspondence concerning the environmental conditions of the property):

A portion of property contains former landfill ("Guyeaux Landfill)

(1). Environmental cleanup liens that are filed or recorded against the site (40 CFR 312.25).

Did a search of recorded land title records (or judicial records where appropriate identify any environmental liens filed or recorded against the property under federal, tribal, state or local law? Yes | ✓ No

If Yes, Describe:

(2). Activity and land use limitations (AULs) that are in place on the site or that have been filed or recorded in a registry (40 CFR 312.26).

Did a search of recorded land title records (or judicial records where appropriate) identify any AULs, such as engineering controls, land use restrictions or institutional controls that are in place at the property and/or have been filed or recorded against the property under federal, tribal, state or local law? Yes | ✓ No

If Yes, Describe:

(3). Specialized knowledge or experience of the person seeking to qualify for the Landowners Liability Protections (LLP) (40 CFR 312.28).

Do you have any specialized knowledge or experience related to the property or the property or nearby properties? For example, are you involved in the same line of business as the current or former occupants of the property or an adjoining property so that you would have specialized knowledge of the chemicals and processes used by this type of business?

Yes | ✓ No

If Yes, Describe:

(4). Relationship of the purchase price to the fair market value of the property if it were not contaminated (40 DRF 312.29).

Does the purchase price being paid for this property reasonably reflect the fair market value of the property?

Yes | No

If you conclude that there is a difference, have you considered whether the lower purchase price is because contamination is known or believed to be present at the property? Yes | No

If Yes, Describe:

(5). Commonly known or reasonable ascertainable information about the property (40 CFR 312.30).

Are you aware of commonly known or *reasonably ascertainable* information about the property that would help the *environmental professional* to identify conditions indicative of releases or threatened releases? For example, as user,

(a.) Do you know the past uses of the property? ✓ Yes | No

(b.) Do you know of specific chemicals that are present or once were present at the property? ✓ Yes | No

(c.) Do you know of spills or other chemical releases that have taken place at the property? Yes | ✓ No

(d.) Do you know of any environmental cleanups that have taken place at the property? Yes | ✓ No

If Yes, Describe: A portion of the property (APN 0163-36-212) contains a former landfill. See soils prior soils test reports.

(6). The degree of obviousness of the presence of likely presence of contamination at the property, and the ability to detect the contamination by appropriate investigation (40 CFR 312.31).

Based on your knowledge and experience related to the *property*, are there any *obvious* indicators that point to the presence or likely presence of contamination at the *property?* ✓ Yes | No

If Yes, Describe: Based on prior soils report provided to the consultant

APPENDIX D

Environmental Lien Report

The NETR Environmental Lien and AUL Search Report

SOUTH OF EAST CONGRESS STREET
COLTON, CALIFORNIA

Monday, May 13, 2019

Project Number: L19-00867

2055 East Rio Salado Parkway
Tempe, Arizona 85281

Telephone: 480-967-6752
Fax: 480-966-9422

ENVIRONMENTAL LIEN AND AUL REPORT

The NETR Environmental LienSearch Report provides results from a search of available current land title records for environmental cleanup liens and other activity and use limitations, such as engineering controls and institutional controls.

A network of professional, trained researchers, following established procedures, uses client supplied property information to:

- search for parcel information and/or legal description;
- search for ownership information;
- research official land title documents recorded at jurisdictional agencies such as recorders' office, registries of deed, county clerks' offices, etc.;
- access a copy of the deed;
- search for environmental encumbering instrument(s) associated with the deed;
- provide a copy of any environmental encumbrance(s) based upon a review of key words in the instrument(s) (title, parties involved and description); and
- provide a copy of the deed or cite documents reviewed;

Thank you for your business
Please contact NETR at 480-967-6752
with any questions or comments

Notice: IMPORTANT LIMITATIONS and YOUR LIABILITY

Reliance on information in Report: This report DOES NOT replace a full Phase I Environmental Site Assessment but is solely intended to be used as database review of environmental records.

License for use of information in Report: No page of this report can be used without this cover page, this notice and the project property identifier. The information in Report(s) may not be modified or re-sold.

Your Liability for misuse: Using this Service and/or its reports in a manner contrary to this Notice or your agreement will be in breach of copyright and contract and ERIS may obtain damages for such mis-use, including damages caused to third parties, and gives ERIS the right to terminate your account, rescind your license to any previous reports and to bar you from future use of the Service.

No warranty of Accuracy or Liability for ERIS: The information contained in this report has been produced by ERIS Information Inc. ("ERIS") using various sources of information, including information provided by Federal and State government departments. The report applies only to the address and up to the date specified on the cover of this report, and any alterations or deviation from this description will require a new report. This report and the data contained herein does not purport to be and does not constitute a guarantee of the accuracy of the information contained herein and does not constitute a legal opinion nor medical advice. Although ERIS has endeavored to present you with information that is accurate, ERIS disclaims, any and all liability for any errors, omissions, or inaccuracies in such information and data, whether attributable to inadvertence, negligence or otherwise, and for any consequences arising therefrom. Liability on the part of ERIS is limited to the monetary value paid for this report.

Trademark and Copyright: You may not use the ERIS trademarks or attribute any work to ERIS other than as outlined above. This Service and Report(s) are protected by copyright owned by ERIS Information Inc. Copyright in data used in the Service or Report(s) (the "Data") is owned by ERIS or its licensors. The Service, Report(s) and Data may not be copied or reproduced in whole or in any substantial part without prior written consent of ERIS.

Executive Summary

Cleanup Status: REFER: EPA AS OF 9/13/2012
Cleanup Oversight Agencies: DTSC - SITE CLEANUP PROGRAM - LEAD AGENCY
Site Type: EVALUATION
Office: CLEANUP CYPRESS
Past Use that Caused Contam: MANUFACTURING - METAL, METAL FINISHING, METAL PLATING - OTHER
Potential Media Affected: SOIL
Potential Contamin of Concern:

ARSENIC, CADMIUM AND COMPOUNDS, LEAD, TETRACHLOROETHYLENE (PCE), TRICHLOROETHYLENE (TCE)

Site History:

Three groundwater monitoring wells (MW-l, MW-2 and MW-3) were constructed and oriented in a southwest to northeast linear configuration across the

Griffin site. The groundwater monitoring wells were complete to depths of approximately 45 feet below ground surface (bgs). Groundwater samples were collected and analyzed for metals and VOCs. The analytical data indicated that the concentrations of arsenic (0.999 to 0.675 (mg/L)), cadmium (0.048 to 0.148 mg/L), and lead (0.053 to 0.21 mg/L) in groundwater exceeded the Maximum Contaminant Level/Maximum Contaminant Level Goal (MCI/MCLG) of 0.05, 0.01, and 0.015 mg/L, respectively. Toluene, TCE, and PCE were also detected in the groundwater, with PCE exceeding the MCL of 5.0 ug/L in Well MW2 (12 ug/L) and Well MW3 (15 ug/L).

On August 22, 2013, USEPA made a no further remedial action planned determination for the site because the RWQCB issued a closure approval letter to the site in 1993.

How Discovered Description:
Stop Description:
Cal Water Watershed Name: Santa Ana River - Colton-Rialto - Colton (801.44)
DWR Groundwater Subbasin: Upper Santa Ana Valley - Riverside-Arlington (8-002.03)
Site History:

The subject site was impacted from past discharges of various volatile and semi-volatile organic compounds from the former underground storage tanks (USTs) at the site and from the disposal of organic waste solvents at the northwest corner of the site and the southwest corner of the adjacent Ashland Chemical site (SWMU-7 area). The Ashland Chemical site (former Aristech Chemical site) is located adjacent to the northern property boundary of the BASF property. Since 1982, several phases of site investigation and soil and groundwater remediation have been conducted at the former UST and SMWU-7 areas. On June 23, 2005, the Executive Officer issued a "No Further Action" letter to BASF for the discharges from the former UST area. In September 2005, soil vapor extraction activities were discontinued in the SWMU-7 area and the affected soil was excavated to the extent practicable. Groundwater monitoring is ongoing to assess the effectiveness of the remediation activities at the site and at the adjacent Ashland Chemical site.

How Discovered Description:
Stop Description:
Cal Water Watershed Name: Santa Ana River - Colton-Rialto - Colton (801.44)
DWR Groundwater Subbasin: Upper Santa Ana Valley - Riverside-Arlington (8-002.03)
Site History:

In August 1982, approximately 1,800 gallons of solvents were reportedly released from two ruptured USTs in the USTs 7-12 area. Morton excavated approximately 565 tons of VOC affected soil and installed 16 groundwater monitoring/extraction wells (IT-1 to IT-16). Initial sampling of the well MW-16 (installed within the UST area indicated toluene, xylenes, and MEK at a concentration of 1,700 ug/l, 190 ug/l, 180 ug/l, respectively. Approximately 190,000 gallons of VOC-affected groundwater was extracted and treated. By March 1984, the concentrations of the VOCs in the downgradient groundwater monitoring wells had reduced to below action levels. In 1986, eight vadose-zone monitoring wells (GS-1 to GS-8) were installed as part of an UST leak detection system upgrade. The results of the well installation indicated that soil and groundwater in the vicinity of the USTs 7-12 area were impacted by VOCs. From 1986 through 1997, a number of soil borings and groundwater monitoring wells (monitoring wells GS-9 and GS-9A) were installed at the site. These investigations indicated two major areas of affected soil and groundwater.: the 7-12 UST area and the SWMU-7 area. The SWMU-7 area was located at the northwestern corner of the Morton property and the southwestern corner of the adjacent former Aristech property. In March 1998, all twelve USTs located north of the paint production building were removed. Non-detectable to low concentrations of VOCs were detected in the soil samples collected from the western tank farm (USTs 1 - 6). The soil impacts in the UST area consisted primarily a mix of aromatic compounds, paint related compounds, and various cyclohexanes. Naphtha solvent, 2-butoxy ethanol, and xylenes were detected in soil sampled below the eastern tank area (USTs 7-12) at a concentration of up to 49,000 ppm, 32,000 ppm, and 1,500 ppm, respectively. The impacted soil was reused for back-fill material. During November 2000, groundwater levels were too low to collect groundwater samples from the shallow-zone wells near the UST 7-12 area. In April 2001, groundwater samples were collected from wells GS-2 and GS-3. Since that time, groundwater levels were too low to collect adequate groundwater samples from the shallow-zone monitoring wells. In November 2003, a soil vapor extraction system (SVES) began operation in the UST 7-12 area. The SVES operated until September 2004. After approximately 4300 hours of operation, the TPH concentrations from the individual wells decreased from a maximum of 3800 ppmv to a maximum of 73 ppmv. The SVES removed approximately 1341 lb of VOCs. Since the VES system was connected to both the UST and SWMU-7 area, it was not possible to calculate the exact volume recovered. In July 2004, two confirmatory soil borings were drilled in the UST area. Low concentrations of xylenes and trimethyl benzenes were detected in the soil. Based on the results of the SVES in the UST 7-12 area, UST 7-12 area.BASF requested that closure for the UST 7-12 area. However, no health risk assessment was conducted on the residual soil concentrations. SVES activities were ongoing ongoing at the SWMU-7 area until September 2004, when BASF decided to excavate the residual VOC-affected soil.

Site Type:	VOLUNTARY CLEANUP
Office:	CLEANUP CHATSWORTH
Past Use that Caused Contam:	MANUFACTURED GAS PLANT
Potential Media Affected:	AQUIFER USED FOR DRINKING WATER SUPPLY AFFECTED, SOIL
Potential Contamin of Concern:	

POLYNUCLEAR AROMATIC HYDROCARBONS (PAHS), SEMI-VOLATILE ORGANICS (8270 SVOCS), TPH-DIESEL

Site History:

The former Colton MGP Site occupies approximately 8.5 acres and is located at an undesignated address on Fogg Street, in the City of Colton, California. Southern California Gas Company purchased the vacant land and used it for manufactured gas production by processing oil feedstock, compression, and storage. The Site was divided into five parcels (A, B, C, D, E). Following the period of gas manufacturing, Parcels A, B, and D were used to compress and store natural gas for distribution in the Colton area. Parcel C is a residence owned by a private party. Residences owned by several private landowners are located on a portion of Parcel E, south of Fogg Street.
A PEA conducted in 1990 showed PAH contamination. A site characterization was completed pursuant to a VCA between DTSC and Sempra Energy. A RAW was approved by DTSC in May, 2004 and soil excavation for PAHs was completed in 2005. A diesel spill was discovered during the cleanup and the extent of the spill was characterized. To monitor the TPH contamination, additional groundwater monitoring wells were. The Removal Action Completion Report was approved in September 2008 after removal action was implemented in 2008. Ground Water Monitoring Reports have been reviewed and the Well Abandonment Work plan is currently under review.

Status:	CERTIFIED / OPERATION & MAINTENANCE

Site History:

Inactive facility - Undergoing Corrective Action: The facility is located in a light industrial zone, in Colton, California. It operated as a polyester resins plant. The primary operations generated waste streams, which consisted of styrene, polymer, silica, organic acids, and ethylene. Some of these waste streams were sent to the on-site incinerator for thermal destruction and some were stored at the hazardous waste storage area. The United States Environmental Protection Agency (U.S.EPA) and the Department of Health Services (DHS) issued permits to the facility for the incinerator and the hazardous waste storage area, respectively. The permit issued by DHS became effective on November 6, 1989 and expired on November 6, 1994. The permit issued by U.S. EPA became effective on November 15, 1989 and expired on November 15, 1994. Aristech's closure certification for the two hazardous waste management units (HWMUs) was acknowledged by DTSC on May 21, 1998.

On November 1988, U.S. EPA completed a RCRA Facility Assessment and identified a total of 17 solid waste management units and three areas of concern that either have released or may release hazardous waste or hazardous waste constituents into the environment. Evidence of groundwater and soil contamination are supported by data from the soil and groundwater samples taking during closure activities and later additional assessment reports. As a result, corrective action was initiated to further investigate and remediate the contamination. A Consent Agreement was signed on January 26, 2005.

Currently, DTSC is reviewing the RCRA Facility Investigation (RFI) Workplan. The RFI Workplan will be used to determine the nature and extend of the contamination at the Aristech site. Once the RFI Workplan is approved, it will be implemented to address the contamination at the Aristech site.

Site History:

Inactive facility - Undergoing Corrective Action: The facility is located in a light industrial zone, in Colton, California. It operated as a polyester resins plant. The primary operations generated waste streams, which consisted of styrene, polymer, silica, organic acids, and ethylene. Some of these waste streams were sent to the on-site incinerator for thermal destruction and some were stored at the hazardous waste storage area. The United States Environmental Protection Agency (U.S.EPA) and the Department of Health Services (DHS) issued permits to the facility for the incinerator and the hazardous waste storage area, respectively. The permit issued by DHS became effective on November 6, 1989 and expired on November 6, 1994. The permit issued by U.S. EPA became effective on November 15, 1989 and expired on November 15, 1994. Aristech's closure certification for the two hazardous waste management units (HWMUs) was acknowledged by DTSC on May 21, 1998.

On November 1988, U.S. EPA completed a RCRA Facility Assessment and identified a total of 17 solid waste management units and three areas of concern that either have released or may release hazardous waste or hazardous waste constituents into the environment. Evidence of groundwater and soil contamination are supported by data from the soil and groundwater samples taking during closure activities and later additional assessment reports. As a result, corrective action was initiated to further investigate and remediate the contamination. A Consent Agreement was signed on January 26, 2005.

DTSC approved the RCRA Facility Investigation (RFI) Workplan in March 2009. DTSC approved the RCRA Facility Investigation Report (RFI) in June 2014. Based on the investigation, hazardous substances including the metals cadmium (1.8 mg/kg), lead (770 mg/kg), and cobalt (140 mg/kg) found in soil, along with benzene (64 ppmv) found in soil gas, remain on and in the Property above the risk-based cleanup levels that would make the property acceptable for unrestricted land use. A Land Use Covenant and Agreement (Covenant) was signed into effect on September 25, 2015.

Site History:

Inactive facility - Undergoing Corrective Action: The facility is located in a light industrial zone, in Colton, California. It operated as a polyester resins plant. The primary operations generated waste streams, which consisted of styrene, polymer, silica, organic acids, and ethylene. Some of these waste streams were sent to the on-site incinerator for thermal destruction and some were stored at the hazardous waste storage area. The United States Environmental Protection Agency (U.S.EPA) and the Department of Health Services (DHS) issued permits to the facility for the incinerator and the hazardous waste storage area, respectively. The permit issued by DHS became effective on November 6, 1989 and expired on November 6, 1994. The permit issued by U.S. EPA became effective on November 15, 1989 and expired on November 15, 1994. Aristech's closure certification for the two hazardous waste management units (HWMUs) was acknowledged by DTSC on May 21, 1998.

On November 1988, U.S. EPA completed a RCRA Facility Assessment and identified a total of 17 solid waste management units and three areas of concern that either have released or may release hazardous waste or hazardous waste constituents into the environment. Evidence of groundwater and soil contamination are supported by data from the soil and groundwater samples taking during closure activities and later additional assessment reports. As a result, corrective action was initiated to further investigate and remediate the contamination. A Consent Agreement was signed on January 26, 2005.

Currently, DTSC is reviewing the RCRA Facility Investigation (RFI) Workplan. The RFI Workplan will be used to determine the nature and extend of the contamination at the Aristech site. Once the RFI Workplan is approved, it will be implemented to address the contamination at the Aristech site.

Site History:

Inactive facility - Undergoing Corrective Action: The facility is located in a light industrial zone, in Colton, California. It operated as a polyester resins plant. The primary operations generated waste streams, which consisted of styrene, polymer, silica, organic acids, and ethylene. Some of these waste streams were sent to the on-site incinerator for thermal destruction and some were stored at the hazardous waste storage area. The United States Environmental Protection Agency (U.S.EPA) and the Department of Health Services (DHS) issued permits to the facility for the incinerator and the hazardous waste storage area, respectively. The permit issued by DHS became effective on November 6, 1989 and expired on November 6, 1994. The permit issued by U.S. EPA became effective on November 15, 1989 and expired on November 15, 1994. Aristech's closure certification for the two hazardous waste management units (HWMUs) was acknowledged by DTSC on May 21, 1998.

On November 1988, U.S. EPA completed a RCRA Facility Assessment and identified a total of 17 solid waste management units and three areas of concern that either have released or may release hazardous waste or hazardous waste constituents into the environment. Evidence of groundwater and soil contamination are supported by data from the soil and groundwater samples taking during closure activities and later additional assessment reports. As a result, corrective action was initiated to further investigate and remediate the contamination. A Consent Agreement was signed on January 26, 2005.

DTSC approved the RCRA Facility Investigation (RFI) Workplan in March 2009. DTSC approved the RCRA Facility Investigation Report (RFI) in June 2014. Based on the investigation, hazardous substances including the metals cadmium (1.8 mg/kg), lead (770 mg/kg), and cobalt (140 mg/kg) found in soil, along with benzene (64 ppmv) found in soil gas, remain on and in the Property above the risk-based cleanup levels that would make the property acceptable for unrestricted land use. A Land Use Covenant and Agreement (Covenant) was signed into effect on September 25, 2015.

Permitting

Site Code:	400207
Site Facility Type:	CLOSED
Program Type:	HAZARDOUS WASTE FACILITY
Assembly District:	47
Senate District:	20
Facility Type:	HIST PERMITTED
Facility History:	

Inactive facility - Undergoing Corrective Action: The facility is located in a light industrial zone, in Colton, California. It operated as a polyester resins plant. The primary operations generated waste streams, which consisted of styrene, polymer, silica, organic acids, and ethylene. Some of these waste streams were sent to the on-site incinerator for thermal destruction and some were stored at the hazardous waste storage area. The United States Environmental Protection Agency (U.S.EPA) and the Department of Health Services (DHS) issued permits to the facility for the incinerator and the hazardous waste storage area, respectively. The permit issued by DHS became effective on November 6, 1989 and expired on November 6, 1994. The permit issued by U.S. EPA became effective on November 15, 1989 and expired on November 15, 1994. Aristech's closure certification for the two hazardous waste management units (HWMUs) was acknowledged by DTSC on May 21, 1998.
On November 1988, U.S. EPA completed a RCRA Facility Assessment and identified a total of 17 solid waste management units and three areas of concern that either have released or may release hazardous waste or hazardous waste constituents into the environment. Evidence of groundwater and soil contamination are supported by data from the soil and groundwater samples taking during closure activities and later additional assessment reports. As a result, corrective action was initiated to further investigate and remediate the contamination. A Consent Agreement was signed on January 26, 2005.
Currently, DTSC is reviewing the RCRA Facility Investigation (RFI) Workplan. The RFI Workplan will be used to determine the nature and extend of the contamination at the Aristech site. Once the RFI Workplan is approved, it will be implemented to address the contamination at the Aristech site.

ARSENIC

Site History:

Site History: This site is about 40 acres and of which 3.5 acre is developed two metal buildings and storage structures. The surrounding area is mainly industrial/commercial with some residential properites located about one quarter mile west of the facility. The first recorded use of the property was in 1899 when Armour Car Line started railroad box-car manu-facturing at the site. Until the mid 1950s, the property was a part of the Pacific Fruit Express wooden and steel railroad box-car manufacturing and refurbish-ment complex. The property was vacant from the mid 1950s until 1968 when CIM began operating a scrap metal and automobile dismantling business at the site. Currently, CIM activities consist of purchasing recy-clable scrap metal, sorting, consolidating, and storing in stockpiles until the scrap metal is transferred for processing and recycling.

In May 2006, the City of Colton requested DTSC to investigate the property for possible contamination at the site. In June 2006, DTSC conducted an investigation and in December 2006, issued a Consent Order for soil sampling to determine if chemicals including lead and Polychlorinated Biphenyls (PCBs) have been released at the site at levels that could pose a health threat to workers, nearby residents, and the environment. In May 2007, DTSC approved an initial sampling workplan and provided oversight for the implementation of the soil sampling to evaluate certain areas at the site for possible contamination.

The investigation report dated July 2, 2007A identified a total of 125 soil samples were collected at depths ranging from 0 to 10 feet. Areas sampled include the Steel Scale House, Former Car Pressing Area, For-mer Battery Storage Area, Storm water Retention Area/Maintenance and Dismantling Containment, and along the Concrete Wall at the north area of the site. The soil samples were analyzed for petroleum hydrocarbons, volatile organic compounds, poly-chlorinated biphenyls (PCBs), and metals including lead and arsenic. Out of the one hundred and twenty five samples ana-lyzed, only five samples detected lead above an indus-trial risk level. The lead level in these samples ranged from 889 mg/kg to 48,000mg/kg. Four of these five samples also detected arsenic above the background level. The arsenic level in these samples ranged from 6 mg/kg to 33 mg/kg. All of these samples were taken underneath the concrete pavement along the Concrete Wall and the other chemicals tested never exceeded their appropriate risk based levels for industrial use of the property.

Site History:

Site History: This site is about 40 acres and of which 3.5 acre is developed two metal buildings and storage structures. The surrounding area is mainly industrial/commercial with some residential properites located about one quarter mile west of the facility. The first recorded use of the property was in 1899 when Armour Car Line started railroad box-car manu-facturing at the site. Until the mid 1950s, the property was a part of the Pacific Fruit Express wooden and steel railroad box-car manufacturing and refurbish-ment complex. The property was vacant from the mid 1950s until 1968 when CIM began operating a scrap metal and automobile dismantling business at the site. Currently, CIM activities consist of purchasing recy-clable scrap metal, sorting, consolidating, and storing in stockpiles until the scrap metal is transferred for processing and recycling.

In May 2006, the City of Colton requested DTSC to investigate the property for possible contamination at the site. In June 2006, DTSC conducted an investigation and in December 2006, issued a Consent Order for soil sampling to determine if chemicals including lead and Polychlorinated Biphenyls (PCBs) have been released at the site at levels that could pose a health threat to workers, nearby residents, and the environment. In May 2007, DTSC approved an initial sampling workplan and provided oversight for the implementation of the soil sampling to evaluate certain areas at the site for possible contamination.

The investigation report dated July 2, 2007A identified a total of 125 soil samples were collected at depths ranging from 0 to 10 feet. Areas sampled include the Steel Scale House, Former Car Pressing Area, For-mer Battery Storage Area, Storm water Retention Area/Maintenance and Dismantling Containment, and along the Concrete Wall at the north area of the site. The soil samples were analyzed for petroleum hydrocarbons, volatile organic compounds, poly-chlorinated biphenyls (PCBs), and metals including lead and arsenic. Out of the one hundred and twenty five samples ana-lyzed, only five samples detected lead above an indus-trial risk level. The lead level in these samples ranged from 889 mg/kg to 48,000mg/kg. Four of these five samples also detected arsenic above the background level. The arsenic level in these samples ranged from 6 mg/kg to 33 mg/kg. All of these samples were taken underneath the concrete pavement along the Concrete Wall and the other chemicals tested never exceeded their appropriate risk based levels for industrial use of the property.

Status: ACTIVE - LAND USE RESTRICTIONS

Cal Water Watershed Name:	Santa Ana River - Colton-Rialto - Colton (801.44)		
DWR Groundwater Subbasin:	Upper Santa Ana Valley - Riverside-Arlington (8-002.03)		
Site History:			

BACKGROUND The Cooley Ranch Sanitary Landfill (site) is located approximately 0.5 mile northwest of Interstate 215 between the cities of Colton and Grand Terrace near the intersection of Mt. Vernon Avenue and Cooley Lane. The site is known primarily as the Cooley Ranch sanitary landfill, but is also known as the Cooley Lane site, and the Mt. Vernon site. The site is owned by the County of San Bernardino and was operated by the County Solid Waste Management Department. The site was closed in 1965; however, the county continues to manage and maintain the site as needed. No groundwater contamination from the landfill was identified and groundwater monitoring was terminated. The site is located in portions of Sections 28, 29, and 32, Township 1 South, Range 4 West of the San Bernardino Meridian (SBM). San Bernardino County Tax Assessor's parcel numbers for the site are 163-381-09, -12, -13; 275-181-38, -39; 275-191-41; 276-123-05; and 276-132-03. SITE CLASSIFICATION, TYPE OF WASTE, and USAGE The site was operated under RWQCB Resolution No. 62-26 from 1962 until its closure in 1965. The site was operated as a Class IT (under the old regulations) solid waste disposal site suitable for receiving Group IT and Group ill wastes, including residential, demolition, and commercial refuse and non-decomposable inert solids. The site was constructed as a flood control dike system along the southeast bank of the Santa Ana River. The fill material consists of a soil refuse mixture that was placed adjacent to the Santa Ana River channel behind a wire debris fence. The base of the fill is estimated to be 5 to 6 feet below the top of the debris fence, resulting in a total levee height of approximately 30 to 40 feet (Bowie, 1990a). No information is available on the exact volume of refuse received at the site. However, volume calculations based on the levee construction plan indicate that the landfill received a total of approximately 3,186,000 cubic yards of refuse, including cover. CLOSURE The site was closed in 1965, before the enactment of State regulations requiring closure reports. However, it is believed this site was properly closed and provided with good surface water drainage (San Bernardino County, 1982). After some erosion of the base of the landfill during a flood on the Santa Ana River in 1969, the San Bernardino County Flood Control District placed large quantities of concrete and stone rip-rap in the critical bend areas located along the northern boundary of the landfill in an effort to prevent future erosion (San Bernardino County, 1970). GEOMORPHOLOGY The landfill consists of a series of flood control levees oriented subparallel and adjacent to the main channel of the Santa Ana River. The site is located on the southern bank of the river and has an approximate elevation of 920 feet above mean sea level (msl). The major topographic features in the vicinity of the site include the La Lorna Hills to the southwest of the site at an elevation of approximately 1,480 feet above msl and Blue Mountain to the southeast at 2,430 feet above msl. Surface topography in the remainder of the area is relatively flat. Surface water runoff in the site vicinity is generally toward the Santa Ana River. REGIONAL GEOLOGY and STRUCTURE The landfill is situated in an alluvial-filled valley associated with the Santa Ana River. The landfill is adjacent to the river channel and overlies Quaternary age alluvial sediments consisting of sands, gravels, silts, and clays. Bordering the main river channel and south of the landfill are alluvial sediments that form the Santa Ana River floodplain. Near the surface, these sediments are generally finer grained than river channel alluvial sediments. SITE GEOLOGY The site is surrounded on all sides by younger alluvium (as mapped by Morton, 1978) characteristic of channel deposits. This younger alluvium consists of gravel, sand, silt, and clay. The younger alluvium overlies older alluvium, which also consists of gravel, sand, silt, and clay. It is difficult to distinguish between the older and younger alluvium on the basis of drill cuttings. Site-specific geology was determined from surface geologic mapping in the vicinity of the site and interpretation of boring logs from monitoring wells CRGW-1 through CRGW-4. HYDROGEOLOGY The regional depth to groundwater varies considerably in the vicinity of the landfill. The San Jacinto fault system presents a major groundwater barrier to the migration of groundwater southwest from the San Bernardino Mountains. Groundwater flow in the vicinity of the landfill is generally to the southwest, subparallel to the flow direction of the Santa Ana River, as indicated by well data collected over several years (California Department of Water Resources [DWR], 1990). Groundwater beneath the landfill occurs in the alluvial sand and gravel sediments associated with the Santa Ana River at a depth ranging from approximately 42 to 60 feet. Recharge to the groundwater system is predominantly from infiltration by Santa Ana River water and infiltration from precipitation, especially during the winter. The regional groundwater gradient is 28.0 feet/mile to the southwest. Water quality data for wells within 1 mile of the landfill indicate total dissolved solids (TDS) concentrations range from approximately 400 to 800 mg/ l. The secondary DWS for TDS is 500 mg/1. Chloride and sulfate concentrations in nearby wells are within specified DWS. SITE GROUNDWATER OCCURRENCE Data obtained from four quarterly monitoring events at the site indicate that groundwater flow beneath the site is to the southwest. The groundwater monitoring system at the site consisted of one upgradient well (CRGW-1) and three downgradient wells (CRGW-2, CRGW-3, and CRGW-4). These wells were abandoned in 2010 as it was determined that the landfill posed no threat to water quality. The groundwater flow direction is not well-defined by the four monitoring wells due to their linear arrangement along the landfill. The gradient of groundwater flow to the southwest is based on other wells in the area PRECIPITATION Historical data indicate that the average annual precipitation in the Cooley Ranch area is approximately 13 inches (DWR, 1986). EVAPOTRANSPIRATION The average annual evaporation rate in the vicinity of the site is approximately 72 inches (DWR, 1979). No transpiration data were identified for the site. WATER and LAND USE Land in the vicinity of the Cooley Ranch sanitary landfill is residential, commercial, industrial, special designation or specific plan, and open space. WASTE TYPES and CAPACITIES The site operated as a Class II (under old regulations) landfill that was permitted to receive nonhazardous and inert solid wastes. Residential, commercial, construction, demolition, and commercial refuse and non-decomposable inert solids were buried at the site. The landfill received an estimated total of 3,186,000 cubic yards of waste (including cover), as calculated based on the levee construction plan . No septic, chemical, industrial, liquid, or hazardous waste was accepted at the landfill.

Site History:

BACKGROUND
The Cooley Ranch Sanitary Landfill (site) is located approximately 0.5 mile northwest of Interstate 215 between the cities of Colton and Grand Terrace near the intersection of Mt. Vernon Avenue and Cooley Lane. The site is known primarily as the Cooley Ranch sanitary landfill, but is also known as the Cooley Lane site, and the Mt. Vernon site.

The site is owned by the County of San Bernardino and was operated by the County Solid Waste Management Department. The site was closed in 1965; however, the county continues to manage and maintain the site as needed. No groundwater contamination from the landfill was identified and groundwater monitoring was terminated.

The site is located in portions of Sections 28, 29, and 32, Township 1 South, Range 4 West of the San Bernardino Meridian (SBM). San Bernardino County Tax Assessor's parcel numbers for the site are 163-381-09, -12, -13; 275-181-38, -39; 275-191-41; 276-123-05; and 276-132-03.

SITE CLASSIFICATION, TYPE OF WASTE, and USAGE
The site was operated under RWQCB Resolution No. 62-26 from 1962 until its closure in 1965. The site was operated as a Class IT (under the old regulations) solid waste disposal site suitable for receiving Group IT and Group ill wastes, including residential, demolition, and commercial refuse and non-decomposable inert solids. The site was constructed as a flood control dike system along the southeast bank of the Santa Ana River. The fill material consists of a soil refuse mixture that was placed adjacent to the Santa Ana River channel behind a wire debris fence. The base of the fill is estimated to be 5 to 6 feet below the top of the debris fence, resulting in a total levee height of approximately 30 to 40 feet (Bowie, 1990a). No information is available on the exact volume of refuse received at the site. However, volume calculations based on the levee construction plan indicate that the landfill received a total of approximately 3,186,000 cubic yards of refuse, including cover.

CLOSURE
The site was closed in 1965, before the enactment of State regulations requiring closure reports. However, it is believed this site was properly closed and provided with good surface water drainage (San Bernardino County, 1982). After some erosion of the base of the landfill during a flood on the Santa Ana River in 1969, the San Bernardino County Flood Control District placed large quantities of concrete and stone rip-rap in the critical bend areas located along the northern boundary of the landfill in an effort to prevent future erosion (San Bernardino County, 1970).

GEOMORPHOLOGY
The landfill consists of a series of flood control levees oriented subparallel and adjacent to the main channel of the Santa Ana River. The site is located on the southern bank of the river and has an approximate elevation of 920 feet above mean sea level (msl). The major topographic features in the vicinity of the site include the La Lorna Hills to the southwest of the site at an elevation of approximately 1,480 feet above msl and Blue Mountain to the southeast at 2,430 feet above msl. Surface topography in the remainder of the area is relatively flat. Surface water runoff in the site vicinity is generally toward the Santa Ana River.

REGIONAL GEOLOGY and STRUCTURE
The landfill is situated in an alluvial-filled valley associated with the Santa Ana River. The landfill is adjacent to the river channel and overlies Quaternary age alluvial sediments consisting of sands, gravels, silts, and clays. Bordering the main river channel and south of the landfill are alluvial sediments that form the Santa Ana River floodplain. Near the surface, these sediments are generally finer grained than river channel alluvial sediments.

SITE GEOLOGY
The site is surrounded on all sides by younger alluvium (as mapped by Morton, 1978) characteristic of channel deposits. This younger alluvium consists of gravel, sand, silt, and clay. The younger alluvium overlies older alluvium, which also consists of gravel, sand, silt, and clay. It is difficult to distinguish between the older and younger alluvium on the basis of drill cuttings. Site-specific geology was determined from surface geologic mapping in the vicinity of the site and interpretation of boring logs from monitoring wells CRGW-1 through CRGW-4.

HYDROGEOLOGY
The regional depth to groundwater varies considerably in the vicinity of the landfill. The San Jacinto fault system presents a major groundwater barrier to the migration of groundwater southwest from the San Bernardino Mountains. Groundwater flow in the vicinity of the landfill is generally to the southwest, subparallel to the flow direction of the Santa Ana River, as indicated by well data collected over several years (California Department of Water Resources [DWR], 1990). Groundwater beneath the landfill occurs in the alluvial sand and gravel sediments associated with the Santa Ana River at a depth ranging from approximately 42 to 60 feet. Recharge to the groundwater system is predominantly from infiltration by Santa Ana River water and infiltration from precipitation, especially during the winter. The regional groundwater gradient is 28.0 feet/mile to the southwest.

Water quality data for wells within 1 mile of the landfill indicate total dissolved solids (TDS) concentrations range from approximately 400 to 800 mg/ l. The secondary DWS for TDS is 500 mg/1. Chloride and sulfate concentrations in nearby wells are within specified DWS.

SITE GROUNDWATER OCCURRENCE
Data obtained from four quarterly monitoring events at the site indicate that groundwater flow beneath the site is to the southwest. The groundwater monitoring system at the site consisted of one upgradient well (CRGW-1) and three downgradient wells (CRGW-2, CRGW-3, and CRGW-4). These wells were abandoned in 2010 as it was determined that the landfill posed no threat to water quality. The groundwater flow direction is not well-defined by the four monitoring wells due to their linear arrangement along the landfill. The gradient of groundwater flow to the southwest is based on other wells in the area

PRECIPITATION
Historical data indicate that the average annual precipitation in the Cooley Ranch area is approximately 13 inches (DWR, 1986).

EVAPOTRANSPIRATION
The average annual evaporation rate in the vicinity of the site is approximately 72 inches (DWR, 1979). No transpiration data were identified for the site.

WATER and LAND USE
Land in the vicinity of the Cooley Ranch sanitary landfill is residential, commercial, industrial, special designation or specific plan, and open space.

WASTE TYPES and CAPACITIES
The site operated as a Class II (under old regulations) landfill that was permitted to receive nonhazardous and inert solid wastes. Residential, commercial, construction, demolition, and commercial refuse and non-decomposable inert solids were buried at the site. The landfill received an estimated total of 3,186,000 cubic yards of waste (including cover), as calculated based on the levee construction plan . No septic, chemical, industrial, liquid, or hazardous waste was accepted at the landfill.

HYDROCARBON SOLVENTS, POLYNUCLEAR AROMATIC HYDROCARBONS (PAHS)

Site History:

The Site is located in a mixed residential, commercial, and industrial area. At the Colton MGP Site, oil was converted into a gaseous product in gas generators from 1903 to 1911. Lampblack was a by-product of the gas manufacturing operations. Lampblack contains a group of organic compounds known as Polycyclic Aromatic Hydrocarbons (PAHs). In 1998, the DTSC conducted a soil investigation on the grounds. Results from this soil sampling showed that elevated levels of PAHs exist on the Site from 2 to 3 feet below ground surface in various areas to the southern border of the facility. In 1999, SCE submitted a Removal Action Workplan (RAW) for the first phase of remedial action at the Site. The first phase of remedial action was conducted in November and December of 1999, in accordance with the RAW. Four hundred and twenty cubic yards of PAHs were removed.

Status: CERTIFIED / OPERATION & MAINTENANCE - LAND USE RESTRICTIONS

Supervisor: JULI PROPES
Public Partici Spclst:
Census Tract: 6071012500
County: SAN BERNARDINO
Latitude: 34.0625
Longitude: -117.320833333333
APN: 163-041-0318
Cleanup Status: CERTIFIED / OPERATION & MAINTENANCE AS OF 6/16/2005
Cleanup Oversight Agencies: DTSC - SITE CLEANUP PROGRAM - LEAD AGENCY
Site Type: VOLUNTARY CLEANUP
Office: CLEANUP CHATSWORTH
Past Use that Caused Contam: MANUFACTURED GAS PLANT
Potential Media Affected: SOIL
Potential Contamin of Concern:

HYDROCARBON SOLVENTS, POLYNUCLEAR AROMATIC HYDROCARBONS (PAHS)

Site History:

The Site is located in a mixed residential, commercial, and industrial area. At the Colton MGP Site, oil was converted into a gaseous product in gas

generators from 1903 to 1911. Lampblack was a by-product of the gas manufacturing operations. Lampblack contains a group of organic compounds known as Polycyclic Aromatic Hydrocarbons (PAHs). In 1998, the DTSC conducted a soil investigation on the grounds. Results from this soil sampling showed that elevated levels of PAHs exist on the Site from 2 to 3 feet below ground surface in various areas to the southern border of the facility. In 1999, SCE submitted a Removal Action Workplan (RAW) for the first phase of remedial action at the Site. The first phase of remedial action was conducted in November and December of 1999, in accordance with the RAW. Four hundred and twenty cubic yards of PAHs were removed.

Status: CERTIFIED / OPERATION & MAINTENANCE - LAND USE RESTRICTIONS
Program Type: VOLUNTARY CLEANUP
CalEnviroScreen Score: 96-100%
Summary Link: http://www.envirostor.dtsc.ca.gov/public/profile_report?global_id=36490108

Land Use Restrictions

Site Management Requirements:
CHECK FOR CRACKS IN FOUNDATION
DAY CARE CENTER PROHIBITED
ELDER CARE CENTER PROHIBITED
HOSPITAL USE PROHIBITED
LAND USE COVENANT
NO EXCAVATION OF CONTAMINATED SOILS WITHOUT AGENCY REVIEW AND APPROVAL
NOTIFY AFTER CHANGE OF PROPERTY OWNER
NOTIFY PRIOR TO SUBSURFACE WORK
PERFORM H&S PLAN PRIOR TO SUBSURFACE WORK
PUBLIC OR PRIVATE SCHOOL FOR PERSONS UNDER 21 PROHIBITED
REQUIRES SURFACE COVERS
RESIDENCE USE PROHIBITED

Document Type: Certification
Date Completed: 6/16/2005
Comments: A Remedial Action Certification was finalized on June 6,2005 for the new MGP Site at 160 South Tenth Street in the City of Colton. Approximately 2000 tons of polycyclic aromatic hydrocarbon and lead contaminated soil was removed from the property. The clean up goal for lead in soil was 97.1 mg/kg. The cleanup goal was met. The cleanup goal for PAHs was established as B (a) P equivalent of upper confidence level of 0.9 mg/kg. The cleanup goal for PAHs was not met at four inaccessible areas. A deed restriction is in place for the specified inaccessible areas.

Appendix: Database Descriptions

Environmental Risk Information Services (ERIS) can search the following databases. The extent of historical information varies with each database and current information is determined by what is publicly available to ERIS at the time of update. ERIS updates databases as set out in ASTM Standard E1527-13, Section 8.1.8 Sources of Standard Source Information:

"Government information from nongovernmental sources may be considered current if the source updates the information at least every 90 days, or, for information that is updated less frequently than quarterly by the government agency, within 90 days of the date the government agency makes the information available to the public."

Standard Environmental Record Sources

Federal

National Priority List: NPL

National Priorities List (Superfund)-NPL: EPA's (United States Environmental Protection Agency) list of the most serious uncontrolled or abandoned hazardous waste sites identified for possible long-term remedial action under the Superfund program. The NPL, which EPA is required to update at least once a year, is based primarily on the score a site receives from EPA's Hazard Ranking System. A site must be on the NPL to receive money from the Superfund Trust Fund for remedial action.

Government Publication Date: Oct 10, 2018

National Priority List - Proposed: PROPOSED NPL

Includes sites proposed (by the EPA, the state, or concerned citizens) for addition to the NPL due to contamination by hazardous waste and identified by the Environmental Protection Agency (EPA) as a candidate for cleanup because it poses a risk to human health and/or the environment.

Government Publication Date: Oct 10, 2018

Deleted NPL: DELETED NPL

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Government Publication Date: Oct 10, 2018

SEMS List 8R Active Site Inventory: SEMS

The Superfund Program has deployed the Superfund Enterprise Management System (SEMS), which integrates multiple legacy systems into a comprehensive tracking and reporting tool. This inventory contains active sites evaluated by the Superfund program that are either proposed to be or are on the National Priorities List (NPL) as well as sites that are in the screening and assessment phase for possible inclusion on the NPL. The Active Site Inventory Report displays site and location information at active SEMS sites. An active site is one at which site assessment, removal, remedial, enforcement, cost recovery, or oversight activities are being planned or conducted.

Government Publication Date: Nov 14, 2018

Inventory of Open Dumps, June 1985: ODI

The Resource Conservation and Recovery Act (RCRA) provides for publication of an inventory of open dumps. The Act defines "open dumps" as facilities which do not comply with EPA's "Criteria for Classification of Solid Waste Disposal Facilities and Practices" (40 CFR 257).

Government Publication Date: Jun 1985

SEMS List 8R Archive Sites: SEMS ARCHIVE

The Superfund Enterprise Management System (SEMS) Archived Site Inventory displays site and location information at sites archived from SEMS. An archived site is one at which EPA has determined that assessment has been completed and no further remedial action is planned under the Superfund program at this time.

Government Publication Date: Nov 14, 2018

EPA Report on the Status of Open Dumps on Indian Lands: IODI

Public Law 103-399, The Indian Lands Open Dump Cleanup Act of 1994, enacted October 22, 1994, identified congressional concerns that solid waste open dump sites located on American Indian or Alaska Native (AI/AN) lands threaten the health and safety of residents of those lands and contiguous areas. The purpose of the Act is to identify the location of open dumps on Indian lands, assess the relative health and environment hazards posed by those sites, and provide financial and technical assistance to Indian tribal governments to close such dumps in compliance with Federal standards and regulations or standards promulgated by Indian Tribal governments or Alaska Native entities.

Government Publication Date: Dec 31, 1998

Comprehensive Environmental Response, Compensation and Liability Information System - CERCLIS: CERCLIS

Superfund is a program administered by the United States Environmental Protection Agency (EPA) to locate, investigate, and clean up the worst hazardous waste sites throughout the United States. CERCLIS is a database of potential and confirmed hazardous waste sites at which the EPA Superfund program has some involvement. It contains sites that are either proposed to be or are on the National Priorities List (NPL) as well as sites that are in the screening and assessment phase for possible inclusion on the NPL. The EPA administers the Superfund program in cooperation with individual states and tribal governments; this database is made available by the EPA.

Government Publication Date: Oct 25, 2013

CERCLIS - No Further Remedial Action Planned: CERCLIS NFRAP

An archived site is one at which EPA has determined that assessment has been completed and no further remedial action is planned under the Superfund program at this time. The Archive designation means that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL). This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

Government Publication Date: Oct 25, 2013

CERCLIS Liens: CERCLIS LIENS

A Federal Superfund lien exists at any property where EPA has incurred Superfund costs to address contamination ("Superfund site") and has provided notice of liability to the property owner. A Federal CERCLA ("Superfund") lien can exist by operation of law at any site or property at which EPA has spent Superfund monies. This database is made available by the United States Environmental Protection Agency (EPA).

Government Publication Date: Jan 30, 2014

RCRA CORRACTS-Corrective Action: RCRA CORRACTS

RCRA Info is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. At these sites, the Corrective Action Program ensures that cleanups occur. EPA and state regulators work with facilities and communities to design remedies based on the contamination, geology, and anticipated use unique to each site.

Government Publication Date: Aug 2, 2018

RCRA non-CORRACTS TSD Facilities: RCRA TSD

RCRA Info is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. This database includes Non-Corrective Action sites listed as treatment, storage and/or disposal facilities of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA).

Government Publication Date: Aug 2, 2018

RCRA Generator List: RCRA LQG

RCRA Info is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. RCRA Info replaces the data recording and reporting abilities of the Resource Conservation and Recovery Information System (RCRIS) and the Biennial Reporting System (BRS). A hazardous waste generator is any person or site whose processes and actions create hazardous waste (see 40 CFR 260.10). Large Quantity Generators (LQGs) generate 1,000 kilograms per month or more of hazardous waste or more than one kilogram per month of acutely hazardous waste.

Government Publication Date: Aug 2, 2018

RCRA Small Quantity Generators List: RCRA SQG

RCRA Info is the EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. RCRA Info replaces the data recording and reporting abilities of the Resource Conservation and Recovery Information System (RCRIS) and the Biennial Reporting System (BRS). A hazardous waste generator is any person or site whose processes and actions create hazardous waste (see 40 CFR 260.10). Small Quantity Generators (SQGs) generate more than 100 kilograms, but less than 1,000 kilograms, of hazardous waste per month.

Government Publication Date: Aug 2, 2018

RCRA Conditionally Exempt Small Quantity Generators List: RCRA CESQG

RCRA Info is the EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. RCRA Info replaces the data recording and reporting abilities of the Resource Conservation and Recovery Information System (RCRIS) and the Biennial Reporting System (BRS). A hazardous waste generator is any person or site whose processes and actions create hazardous waste (see 40 CFR 260.10). Conditionally Exempt Small Quantity Generators (CESQG) generate 100 kilograms or less per month of hazardous waste or one kilogram or less per month of acutely hazardous waste.

Government Publication Date: Aug 2, 2018

RCRA Non-Generators: RCRA NON GEN

RCRA Info is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. RCRA Info replaces the data recording and reporting abilities of the Resource Conservation and Recovery Information System (RCRIS) and the Biennial Reporting System (BRS). A hazardous waste generator is any person or site whose processes and actions create hazardous waste (see 40 CFR 260.10). Non-Generators do not presently generate hazardous waste.

Government Publication Date: Aug 2, 2018

Federal Engineering Controls-ECs: FED ENG

Engineering controls (ECs) encompass a variety of engineered and constructed physical barriers (e.g., soil capping, sub-surface venting systems, mitigation barriers, fences) to contain and/or prevent exposure to contamination on a property. This database is made available by the United States Environmental Protection Agency (EPA).

Government Publication Date: Jan 20, 2016

Federal Institutional Controls- ICs: FED INST

Institutional controls are non-engineered instruments, such as administrative and legal controls, that help minimize the potential for human exposure to contamination and/or protect the integrity of the remedy. Although it is EPA's (United States Environmental Protection Agency) expectation that treatment or engineering controls will be used to address principal threat wastes and that groundwater will be returned to its beneficial use whenever practicable, ICs play an important role in site remedies because they reduce exposure to contamination by limiting land or resource use and guide human behavior at a site.

Government Publication Date: Jan 20, 2016

Emergency Response Notification System: ERNS 1982 TO 1986

Database of oil and hazardous substances spill reports controlled by the National Response Center. The primary function of the National Response Center is to serve as the sole national point of contact for reporting oil, chemical, radiological, biological, and etiological discharges into the environment anywhere in the United States and its territories.

Government Publication Date: 1982-1986

Emergency Response Notification System: ERNS 1987 TO 1989

Database of oil and hazardous substances spill reports controlled by the National Response Center. The primary function of the National Response Center is to serve as the sole national point of contact for reporting oil, chemical, radiological, biological, and etiological discharges into the environment anywhere in the United States and its territories.

Government Publication Date: 1987-1989

Emergency Response Notification System: ERNS

Database of oil and hazardous substances spill reports controlled by the National Response Center. The primary function of the National Response Center is to serve as the sole national point of contact for reporting oil, chemical, radiological, biological, and etiological discharges into the environment anywhere in the United States and its territories. This database is made available by the United States Environmental Protection Agency (EPA).

Government Publication Date: Sep 24, 2018

The Assessment, Cleanup and Redevelopment Exchange System (ACRES) Brownfield Database: FED BROWNFIELDS

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties protects the environment, reduces blight, and takes development pressures off greenspaces and working lands. This database is made available by the United States Environmental Protection Agency (EPA).

Government Publication Date: Jan 11, 2019

FEMA Underground Storage Tank Listing: FEMA UST

The Federal Emergency Management Agency (FEMA) of the Department of Homeland Security maintains a list of FEMA owned underground storage tanks.

Government Publication Date: Dec 31, 2017

LIEN on Property: SEMS LIEN

The EPA Superfund Enterprise Management System (SEMS) provides LIEN information on properties under the EPA Superfund Program.

Government Publication Date: Nov 14, 2018

Superfund Decision Documents: SUPERFUND ROD

This database contains a listing of decision documents for Superfund sites. Decision documents serve to provide the reasoning for the choice of (or) changes to a Superfund Site cleanup plan. The decision documents include Records of Decision (ROD), ROD Amendments, Explanations of Significant Differences (ESD), along with other associated memos and files. This information is maintained and made available by the US EPA (Environmental Protection Agency).

Government Publication Date: Nov 14, 2018

State

State Response Sites: RESPONSE

A list of identified confirmed release sites where the Department of Toxic Substances Control (DTSC) is involved in remediation, either in a lead or oversight capacity. These confirmed release sites are generally high-priority and high potential risk. This database is state equivalent NPL.

Government Publication Date: Dec 20, 2018

EnviroStor Database: ENVIROSTOR

The EnviroStor Data Management System is made available by the Department of Toxic Substances Control (DTSC). Includes Corrective Action sites, Tiered Permit sites, Historical Sites and Evaluation/Investigation sites. This database is state equivalent CERCLIS.

Government Publication Date: Dec 20, 2018

Delisted State Response Sites: DELISTED ENVS

Sites removed from the list of State Response Sites made available by the EnviroStor Data Management System, Department of Toxic Substances Control (DTSC).

Government Publication Date: Dec 20, 2018

Solid Waste Information System (SWIS): SWF/LF

The Solid Waste Information System (SWIS) database made available by the Department of Resources Recycling and Recovery (CalRecycle) contains information on solid waste facilities, operations, and disposal sites throughout the State of California. The types of facilities found in this database include landfills, transfer stations, material recovery facilities, composting sites, transformation facilities, waste tire sites, and closed disposal sites.

Government Publication Date: Nov 23, 2018

EnviroStor Hazardous Waste Facilities: HWP

A list of hazardous waste facilities including permitted, post-closure and historical facilities found in the Department of Toxic Substances Control (DTSC) EnviroStor database.

Government Publication Date: Dec 20, 2018

Sites Listed in the Solid Waste Assessment Test (SWAT) Program Report: SWAT

In a 1993 Memorandum of Understanding, the State Water Resources Control Board (SWRCB) agreed to submit a comprehensive report on the Solid Waste Assessment Test (SWAT) Program to the California Integrated Waste Management Board (CIWMB). This report summarizes the work completed to date on the SWAT Program, and addresses both the impacts that leakage from solid waste disposal sites (SWDS) may have upon waters of the State and the actions taken to address such leakage.

Government Publication Date: Dec 31, 1995

Land Disposal Sites: LDS

Land Disposal Sites in GeoTracker, the State Water Resources Control Board (SWRCB)'s data management system. The Land Disposal program regulates of waste discharge to land for treatment, storage and disposal in waste management units. Waste management units include waste piles, surface impoundments, and landfills.

Government Publication Date: Nov 30, 2018

Leaking Underground Fuel Tank Reports: LUST

List of Leaking Underground Storage Tanks within the Cleanup Sites data in GeoTracker database. GeoTracker is the State Water Resources Control Board's (SWRCB) data management system for managing sites that impact groundwater, especially those that require groundwater cleanup (Underground Storage Tanks, Department of Defense and Site Cleanup Program) as well as permitted facilities such as operating Underground Storage Tanks. The Leak Prevention Program that overlooks LUST sites is the SWRCB in California's Environmental Protection Agency.

Government Publication Date: Nov 30, 2018

Delisted Leaking Storage Tanks: DELISTED LST

List of Leaking Underground Storage Tanks (LUST) cleanup sites removed from GeoTracker, the State Water Resources Control Board (SWRCB)'s database system, as well as sites removed from the SWRCB's list of UST Case closures.

Government Publication Date: Nov 30, 2018

Solid Waste Disposal Sites with Waste Constituents Above Hazardous Waste Levels: SWRCB SWF

This is a list of solid waste disposal sites identified by California State Water Resources Control Board with waste constituents above hazardous waste levels outside the waste management unit.

Government Publication Date: Sep 20, 2006

Permitted Underground Storage Tank (UST) in GeoTracker: UST

List of Permitted Underground Storage Tank (UST) sites made available by the State Water Resources Control Board (SWRCB) in California's Environmental Protection Agency (EPA).

Government Publication Date: Nov 30, 2018

Proposed Closure of Underground Storage Tank Cases: UST CLOSURE

List of UST cases that are being considered for closure by either the California Environmental Protection Agency, State Water Resources Control Board or the Executive Director that have been posted for a 60-day public comment period.

Government Publication Date: Dec 11, 2018

Historical Hazardous Substance Storage Information Database: HHSS

The Historical Hazardous Substance Storage database contains information collected in the 1980s from facilities that stored hazardous substances. The information was originally collected on paper forms, was later transferred to microfiche, and recently indexed as a searchable database. When using this database, please be aware that it is based upon self-reported information submitted by facilities which has not been independently verified. It is unlikely that every facility responded to the survey and the database should not be expected to be a complete inventory of all facilities that were operating at that time. This database is maintained by the California State Water Resources Control Board's (SWRCB) Geotracker.

Government Publication Date: Aug 27, 2015

Aboveground Storage Tanks: AST

A statewide list from 2009 of aboveground storage tanks (ASTs) made available by the Cal FIRE Office of the State Fire Marshal (OSFM). This list is no longer maintained or updated by the Cal FIRE OSFM.

Government Publication Date: Aug 31, 2009

Delisted Storage Tanks: DELISTED TNK

This database contains a list of storage tank sites that were removed by the State Water Resources Control Board (SWRCB) in California's Environmental Protection Agency (EPA) and the Cal FIRE Office of State Fire Marshal (OSFM).

Government Publication Date: Nov 30, 2018

California Environmental Reporting System (CERS) Tanks: CERS TANK

List of sites in the California Environmental Protection Agency (CalEPA) Regulated Site Portal which fall under the Aboveground Petroleum Storage and Underground Storage Tank regulatory programs. The CalEPA oversees the statewide implementation of the Unified Program which applies regulatory standards to protect Californians from hazardous waste and materials.

Government Publication Date: Nov 29, 2018

Site Mitigation and Brownfields Reuse Program Facility Sites with Land Use Restrictions: LUR

The Department of Toxic Substances Control (DTSC) Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents land use restrictions that are active. Some sites have multiple land use restrictions.

Government Publication Date: Dec 20, 2018

Hazardous Waste Management Program Facility Sites with Deed / Land Use Restrictions: HLUR

The Department of Toxic Substances Control (DTSC) Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

Government Publication Date: Jan 21, 2019

Deed Restrictions and Land Use Restrictions: DEED

List of Deed Restrictions, Land Use Restrictions and Covenants in GeoTracker made available by the State Water Resources Control Board (SWRCB) in California's Environmental Protection Agency. A deed restriction (land use covenant) may be required to facilitate the remediation of past environmental contamination and to protect human health and the environment by reducing the risk of exposure to residual hazardous materials.

Government Publication Date: Nov 30, 2018

Voluntary Cleanup Program: VCP

List of sites in the Voluntary Cleanup Program made available by the Department of Toxic Substances and Control (DTSC). The Voluntary Cleanup Program was designed to respond to lower priority sites. Under the Voluntary Cleanup Program, DTSC enters site-specific agreements with project proponents for DTSC oversight of site assessment, investigation, and/or removal or remediation activities, and the project proponents agree to pay DTSC's reasonable costs for those services.

Government Publication Date: Dec 20, 2018

GeoTracker Cleanup Sites Data: CLEANUP SITES

A list of cleanup sites in the state of California made available by The State Water Resources Control Board (SWRCB) of the California Environmental Protection Agency (EPA). SWRCB tracks leaking underground storage tank cleanups as well as other water board cleanups.

Government Publication Date: Nov 30, 2018

Delisted California Environmental Reporting System (CERS) Tanks: DELISTED CTNK

This database contains a list of Aboveground Petroleum Storage and Underground Storage Tank sites that were removed from in the California Environmental Protection Agency (CalEPA) Regulated Site Portal.

Government Publication Date: Nov 29, 2018

Historical Hazardous Substance Storage Container Information - Facility Summary: HIST TANK

The State Water Resources Control Board maintained the Hazardous Substance Storage Containers listing and inventory in th 1980s. This facility summary lists historic tank sites where the following container types were present: farm motor vehicle fuel tanks; waste tanks; sumps; pits, ponds, lagoons, and others; and all other product tanks. This set, published in May 1988, lists facility and owner information, as well as the number of containers. This data is historic and will not be updated.

Government Publication Date: May 27, 1988

Tribal

Leaking Underground Storage Tanks (LUSTs) on Indian Lands: INDIAN LUST

LUSTs on Tribal/Indian Lands in Region 9, which includes California.

Government Publication Date: Dec 31, 2017

Underground Storage Tanks (USTs) on Indian Lands: INDIAN UST

USTs on Tribal/Indian Lands in Region 9, which includes California.

Government Publication Date: Dec 31, 2017

Delisted Tribal Leaking Storage Tanks: DELISTED ILST

Leaking Underground Storage Tank facilities which have been removed from the Regional Tribal LUST lists made available by the EPA.

Government Publication Date: Oct 14, 2017

Delisted Tribal Underground Storage Tanks: DELISTED IUST

Underground Storage Tank facilities which have been removed from the Regional Tribal UST lists made available by the EPA.

Government Publication Date: Oct 14, 2017

County

Delisted County Records: DELISTED COUNTY

Records removed from county or CUPA databases. Records may be removed from the county lists made available by the respective county departments because they are inactive, or because they have been deemed to be below reportable thresholds.

Government Publication Date: Jan 17, 2019

Orange County - Anaheim City UST Cleanup Cases: UST CLEANUP

A list of UST Cleanup Cases in the City of Anaheim in Orange County. As part of its Groundwater Protection Program, the City of Anaheim managed the UST Cleanup Oversight Program from April 1991 to June 2014. This list is published by the City of Anaheim Underground Storage Tank Cleanup Program.

Government Publication Date: May 26, 2015

San Bernardino County - CUPA List: SANBERN CUPA

A list of facilities associated with various Certified Unified Program Agency (CUPA) programs in San Bernardino County. This list is made available by San Bernardino County Fire Department which is the CUPA for all areas of the County except the city of Victorville.

Government Publication Date: Oct 17, 2018

San Francisco County - Maher Ordinance: MAHER SF

List of development projects that are located on sites with known or suspected soil and/or groundwater contamination are subject to the provisions of Health Code Article 22A, which is administered by the San Francisco County Department of Public Health (DPH).

Government Publication Date: Nov 1, 2018

Additional Environmental Record Sources

Federal

Facility Registry Service/Facility Index: FINDS/FRS

The US Environmental Protection Agency (EPA)'s Facility Registry System (FRS) is a centrally managed database that identifies facilities, sites or places subject to environmental regulations or of environmental interest. FRS creates high-quality, accurate, and authoritative facility identification records through rigorous verification and management procedures that incorporate information from program national systems, state master facility records, data collected from EPA's Central Data Exchange registrations and data management personnel.

Government Publication Date: Oct 17, 2018

Toxics Release Inventory (TRI) Program: TRIS

The EPA's Toxics Release Inventory (TRI) is a database containing data on disposal or other releases of over 650 toxic chemicals from thousands of U.S. facilities and information about how facilities manage those chemicals through recycling, energy recovery, and treatment. One of TRI's primary purposes is to inform communities about toxic chemical releases to the environment.

Government Publication Date: Dec 31, 2017

Hazardous Materials Information Reporting System: HMIRS

US DOT - Department of Transportation Pipeline and Hazardous Materials Safety Administration (PHMSA) Incidents Reports Database taken from Hazmat Intelligence Portal, U.S. Department of Transportation.

Government Publication Date: May 23, 2018

National Clandestine Drug Labs: NCDL

The U.S. Department of Justice ("the Department") provides this data as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy.

Government Publication Date: Jul 18, 2018

Toxic Substances Control Act: TSCA

The Environmental Protection Agency (EPA) is amending the Toxic Substances Control Act (TSCA) section 8(a) Inventory Update Reporting (IUR) rule and changing its name to the Chemical Data Reporting (CDR) rule.

The CDR enables EPA to collect and publish information on the manufacturing, processing, and use of commercial chemical substances and mixtures (referred to hereafter as chemical substances) on the TSCA Chemical Substance Inventory (TSCA Inventory). This includes current information on chemical substance production volumes, manufacturing sites, and how the chemical substances are used. This information helps the Agency determine whether people or the environment are potentially exposed to reported chemical substances. EPA publishes submitted CDR data that is not Confidential Business Information (CBI).

Government Publication Date: Jun 30, 2017

Hist TSCA: HIST TSCA

The Environmental Protection Agency (EPA) is amending the Toxic Substances Control Act (TSCA) section 8(a) Inventory Update Reporting (IUR) rule and changing its name to the Chemical Data Reporting (CDR) rule.
The 2006 IUR data summary report includes information about chemicals manufactured or imported in quantities of 25,000 pounds or more at a single site during calendar year 2005. In addition to the basic manufacturing information collected in previous reporting cycles, the 2006 cycle is the first time EPA collected information to characterize exposure during manufacturing, processing and use of organic chemicals. The 2006 cycle also is the first time manufacturers of inorganic chemicals were required to report basic manufacturing information.

Government Publication Date: Dec 31, 2006

FTTS Administrative Case Listing: FTTS ADMIN

An administrative case listing from the Federal Insecticide, Fungicide, & Rodenticide Act (FIFRA) and Toxic Substances Control Act (TSCA), together known as FTTS. This database was obtained from the Environmental Protection Agency's (EPA) National Compliance Database (NCDB). The FTTS and NCDB was shut down in 2006.

Government Publication Date: Jan 19, 2007

FTTS Inspection Case Listing: FTTS INSP

An inspection case listing from the Federal Insecticide, Fungicide, & Rodenticide Act (FIFRA) and Toxic Substances Control Act (TSCA), together known as FTTS. This database was obtained from the Environmental Protection Agency's (EPA) National Compliance Database (NCDB). The FTTS and NCDB was shut down in 2006.

Government Publication Date: Jan 19, 2007

Potentially Responsible Parties List: PRP

Early in the cleanup process, the Environmental Protection Agency (EPA) conducts a search to find the potentially responsible parties (PRPs). EPA looks for evidence to determine liability by matching wastes found at the site with parties that may have contributed wastes to the site.

Government Publication Date: Aug 13, 2018

State Coalition for Remediation of Drycleaners Listing: SCRD DRYCLEANER

The State Coalition for Remediation of Drycleaners (SCRD) was established in 1998, with support from the U.S. Environmental Protection Agency (EPA) Office of Superfund Remediation and Technology Innovation. Coalition members are states with mandated programs and funding for drycleaner site remediation. Current members are Alabama, Connecticut, Florida, Illinois, Kansas, Minnesota, Missouri, North Carolina, Oregon, South Carolina, Tennessee, Texas, and Wisconsin.

Government Publication Date: Nov 08, 2017

Integrated Compliance Information System (ICIS): ICIS

The Integrated Compliance Information System (ICIS) is a system that provides information for the Federal Enforcement and Compliance (FE&C) and the National Pollutant Discharge Elimination System (NPDES) programs. The FE&C component supports the Environmental Protection Agency's (EPA) Civil Enforcement and Compliance program activities. These activities include Compliance Assistance, Compliance Monitoring and Enforcement. The NPDES program supports tracking of NPDES permits, limits, discharge monitoring data and other program reports.

Government Publication Date: Nov 18, 2016

Drycleaner Facilities: FED DRYCLEANERS

A list of drycleaner facilities from the Integrated Compliance Information System (ICIS). The Environmental Protection Agency (EPA) tracks facilities that possess NAIC and SIC codes that classify businesses as drycleaner establishments.

Government Publication Date: May 29, 2018

Delisted Drycleaner Facilities: DELISTED FED DRY

List of sites removed from the list of Drycleaner Facilities (sites in the EPA's Integrated Compliance Information System (ICIS) with NAIC or SIC codes identifying the business as a drycleaner establishment).

Government Publication Date: May 29, 2018

Formerly Used Defense Sites: FUDS

Formerly Used Defense Sites (FUDS) are properties that were formerly owned by, leased to, or otherwise possessed by and under the jurisdiction of the Secretary of Defense prior to October 1986, where the Department of Defense (DoD) is responsible for an environmental restoration. This list is published by the U.S. Army Corps of Engineers.

Government Publication Date: Oct 23, 2018

Material Licensing Tracking System (MLTS): MLTS

A list of sites that store radioactive material subject to the Nuclear Regulatory Commission (NRC) licensing requirements. This list is maintained by the NRC. As of September 2016, the NRC no longer releases location information for sites. Site locations were last received in July 2016.

Government Publication Date: Nov 1, 2018

Historic Material Licensing Tracking System (MLTS) sites: HIST MLTS

A historic list of sites that have inactive licenses and/or removed from the Material Licensing Tracking System (MLTS). In some cases, a site is removed from the MLTS when the state becomes an "Agreement State". An Agreement State is a State that has signed an agreement with the Nuclear Regulatory Commission (NRC) authorizing the State to regulate certain uses of radioactive materials within the State.

Government Publication Date: Jan 31, 2010

Mines Master Index File: MINES

The Master Index File (MIF) contains mine identification numbers issued by the Department of Labor Mine Safety and Health Administration (MSHA) for mines active or opened since 1971. Note that addresses may or may not correspond with the physical location of the mine itself.

Government Publication Date: Jan 30, 2018

Alternative Fueling Stations: ALT FUELS

List of alternative fueling stations made available by the US Department of Energy's Office of Energy Efficiency & Renewable Energy. Includes Biodiesel stations, Ethanol (E85) stations, Liquefied Petroleum Gas (Propane) stations, Ethanol (E85) stations, Natural Gas stations, Hydrogen stations, and Electric Vehicle Supply Equipment (EVSE). The National Renewable Energy Laboratory (NREL) obtains information about new stations from trade media, Clean Cities coordinators, a Submit New Station form on the Station Locator website, and through collaborating with infrastructure equipment and fuel providers, original equipment manufacturers (OEMs), and industry groups.

Government Publication Date: Oct 16, 2018

Registered Pesticide Establishments: SSTS

List of active EPA-registered foreign and domestic pesticide-producing and device-producing establishments based on data from the Section Seven Tracking System (SSTS). The Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) Section 7 requires that facilities producing pesticides, active ingredients, or devices be registered. The list of establishments is made available by the EPA.

Government Publication Date: Mar 1, 2018

Polychlorinated Biphenyl (PCB) Notifiers: PCB

Facilities included in the national list of facilities that have notified the United States Environmental Protection Agency (EPA) of Polychlorinated Biphenyl (PCB) activities. Any company or person storing, transporting or disposing of PCBs or conducting PCB research and development must notify the EPA and receive an identification number.

Government Publication Date: Sep 14, 2018

State

Dry Cleaning Facilities: DRYCLEANERS

A list of drycleaner related facilities that have EPA ID numbers. These are facilities with certain SIC codes: power laundries, family and commercial, linen supply, commercial laundry, dry cleaning and pressing machines - Coin Operated Laundry and Dry Cleaning. This is provided by the Department of Toxic Substance Control.

Government Publication Date: Oct 18, 2018

Delisted Drycleaners: DELISTED DRYCLEANERS

Sites removed from the list of drycleaner related facilities that have EPA ID numbers, made available by the California Department of Toxic Substance Control.

Government Publication Date: Oct 18, 2018

Non-Toxic Dry Cleaning Incentive Program: DRYC GRANT

A list of grant recipients of the Non-Toxic Dry Cleaning Incentive Program made available by the California Air Resources Board (CARB). The program provides grants to eligible dry cleaning businesses to assist them in transitioning away from PERC machines to alternative non-toxic and non-smog forming technologies.

Government Publication Date: Feb 28, 2018

Hazardous Waste and Substances Site List - Site Cleanup: HWSS CLEANUP

The Hazardous Waste and Substances Sites (Cortese) List is a planning document used by the State, local agencies and developers to comply with the California Environmental Quality Act requirements in providing information about the location of hazardous materials release sites. This list is published by California Department of Toxic Substance Control.

Government Publication Date: Dec 4, 2018

List of Hazardous Waste Facilities Subject to Corrective Action: DTSC HWF

This is a list of hazardous waste facilities identified in Health and Safety Code (HSC) § 25187.5. These facilities are those where Department of Toxic Substances Control (DTSC) has taken or contracted for corrective action because a facility owner/operator has failed to comply with a date for taking corrective action in an order issued under HSC § 25187, or because DTSC determined that immediate corrective action was necessary to abate an imminent or substantial endangerment.

Government Publication Date: Jul 18, 2016

EnviroStor Inspection, Compliance, and Enforcement: INSP COMP ENF

A list of permitted facilities with inspections and enforcements tracked in the Department of Toxic Substance Control (DTSC) EnviroStor.

Government Publication Date: Oct 2, 2018

School Property Evaluation Program Sites: SCH

A list of sites registered with The Department of Toxic Substances Control (DTSC) School Property Evaluation and Cleanup (SPEC) Division. SPEC is responsible for assessing, investigating and cleaning up proposed school sites. The Division ensures that selected properties are free of contamination or, if the properties were previously contaminated, that they have been cleaned up to a level that protects the students and staff who will occupy the new school.

Government Publication Date: Dec 20, 2018

California Hazardous Material Incident Report System (CHMIRS): CHMIRS

A list of reported hazardous material incidents, spills, and releases from the California Hazardous Material Incident Report System (CHMIRS). This list has been made available by the California Office of Emergency Services (OES).

Government Publication Date: Jun 19, 2018

Hazardous Waste Manifest Data: HAZNET

A list of hazardous waste manifests received each year by Department of Toxic Substances Control (DTSC). The volume of manifests is typically 900,000 - 1,000,000 annually, representing approximately 450,000 - 500,000 shipments.

Government Publication Date: Oct 24, 2016

Historical California Hazardous Material Incident Report System (CHMIRS): HIST CHMIRS

A list of reported hazardous material incidents, spills, and releases from the California Hazardous Material Incident Report System (CHMIRS) prior to 1993. This list has been made available by the California Office of Emergency Services (OES).

Government Publication Date: Jan 1, 1993

Historical Hazardous Waste Manifest Data: HIST MANIFEST

A list of historic hazardous waste manifests received by the Department of Toxic Substances Control (DTSC) from year the 1980 to 1992. The volume of manifests is typically 900,000 - 1,000,000 annually, representing approximately 450,000 - 500,000 shipments.

Government Publication Date: Dec 31, 1992

Historical Cortese List: HIST CORTESE

List of sites which were once included on the Cortese list. The Hazardous Waste and Substances Sites (Cortese) List is a planning document used by the State, local agencies and developers to comply with the California Environmental Quality Act requirements for providing information about the location of hazardous sites.

Government Publication Date: Nov 13, 2008

Cease and Desist Orders and Cleanup and Abatement Orders: CDO/CAO

The California Environment Protection Agency "Cortese List" of active Cease and Desist Orders (CDO) and Cleanup and Abatement Orders (CAO). This list contains many CDOs and CAOs that do NOT concern the discharge of wastes that are hazardous materials. Many of the listed orders concern, as examples, discharges of domestic sewage, food processing wastes, or sediment that do not contain hazardous materials, but the Water Boards' database does not distinguish between these types of orders.

Government Publication Date: Feb 16, 2012

California Environmental Reporting System (CERS) Hazardous Waste Sites: CERS HAZ

List of sites in the California Environmental Protection Agency (CalEPA) Regulated Site Portal which fall under the following regulatory programs: Hazardous Chemical Management, Hazardous Waste Onsite Treatment, Household Hazardous Waste Collection, Hazardous Waste Generator, RCRA LQ HW Generator. The CalEPA oversees the statewide implementation of the Unified Program which applies regulatory standards to protect Californians from hazardous waste and materials.

Government Publication Date: Nov 29, 2018

Delisted Environmental Reporting System (CERS) Hazardous Waste Sites: DELISTED HAZ

This database contains a list of sites that were removed from the California Environmental Protection Agency (CalEPA) in the following regulatory programs: Hazardous Chemical Management, Hazardous Waste Onsite Treatment, Household Hazardous Waste Collection, Hazardous Waste Generator, RCRA LQ HW Generator.

Government Publication Date: Nov 29, 2018

Waste Discharge Requirements: WASTE DISCHG

List of sites in California State Water Resources Control Board (SWRCB) Waste Discharge Requirements (WDRs) Program in California, made available by the SWRCB via GeoTracker. The WDR program regulates point discharges that are exempt pursuant to Subsection 20090 of Title 27 and not subject to the Federal Water Pollution Control Act. The scope of the WDRs Program also includes the discharge of wastes classified as inert, pursuant to section 20230 of Title 27.

Government Publication Date: Nov 30, 2018

Toxic Pollutant Emissions Facilities: EMISSIONS

A list of criteria and toxic pollutant emissions data for facilities in California made available by the California Environmental Protection Agency - Air Resources Board (ARB). Risk data may be based on previous inventory submittals. The toxics data are submitted to the ARB by the local air districts as requirement of the Air Toxics "Hot Spots" Program. This program requires emission inventory updates every four years.

Government Publication Date: Dec 31, 2016

Clandestine Drug Lab Sites: CDL

The Department of Toxic Substances Control (DTSC) maintains a listing of drug lab sites. DTSC is responsible for removal and disposal of hazardous substances discovered by law enforcement officials while investigating illegal/clandestine drug laboratories.

Government Publication Date: Dec 31, 2017

Tribal

No Tribal additional environmental record sources available for this State.

County

No County additional environmental databases were selected to be included in the search.

Definitions

Database Descriptions: This section provides a detailed explanation for each database including: source, information available, time coverage, and acronyms used. They are listed in alphabetic order.

Detail Report: This is the section of the report which provides the most detail for each individual record. Records are summarized by location, starting with the project property followed by records in closest proximity.

Distance: The distance value is the distance between plotted points, not necessarily the distance between the sites' boundaries. All values are an approximation.

Direction: The direction value is the compass direction of the site in respect to the project property and/or center point of the report.

Elevation: The elevation value is taken from the location at which the records for the site address have been plotted. All values are an approximation. Source: Google Elevation API.

Executive Summary: This portion of the report is divided into 3 sections:

'Report Summary'- Displays a chart indicating how many records fall on the project property and, within the report search radii.

'Site Report Summary'-Project Property'- This section lists all the records which fall on the project property. For more details, see the 'Detail Report' section.

'Site Report Summary-Surrounding Properties'- This section summarizes all records on adjacent properties, listing them in order of proximity from the project property. For more details, see the 'Detail Report' section.

Map Key: The map key number is assigned according to closest proximity from the project property. Map Key numbers always start at #1. The project property will always have a map key of '1' if records are available. If there is a number in brackets beside the main number, this will indicate the number of records on that specific property. If there is no number in brackets, there is only one record for that property.

The symbol and colour used indicates 'elevation': the red inverted triangle will dictate 'ERIS Sites with Lower Elevation', the yellow triangle will dictate 'ERIS Sites with Higher Elevation' and the orange square will dictate 'ERIS Sites with Same Elevation.'

Unplottables: These are records that could not be mapped due to various reasons, including limited geographic information. These records may or may not be in your study area, and are included as reference.

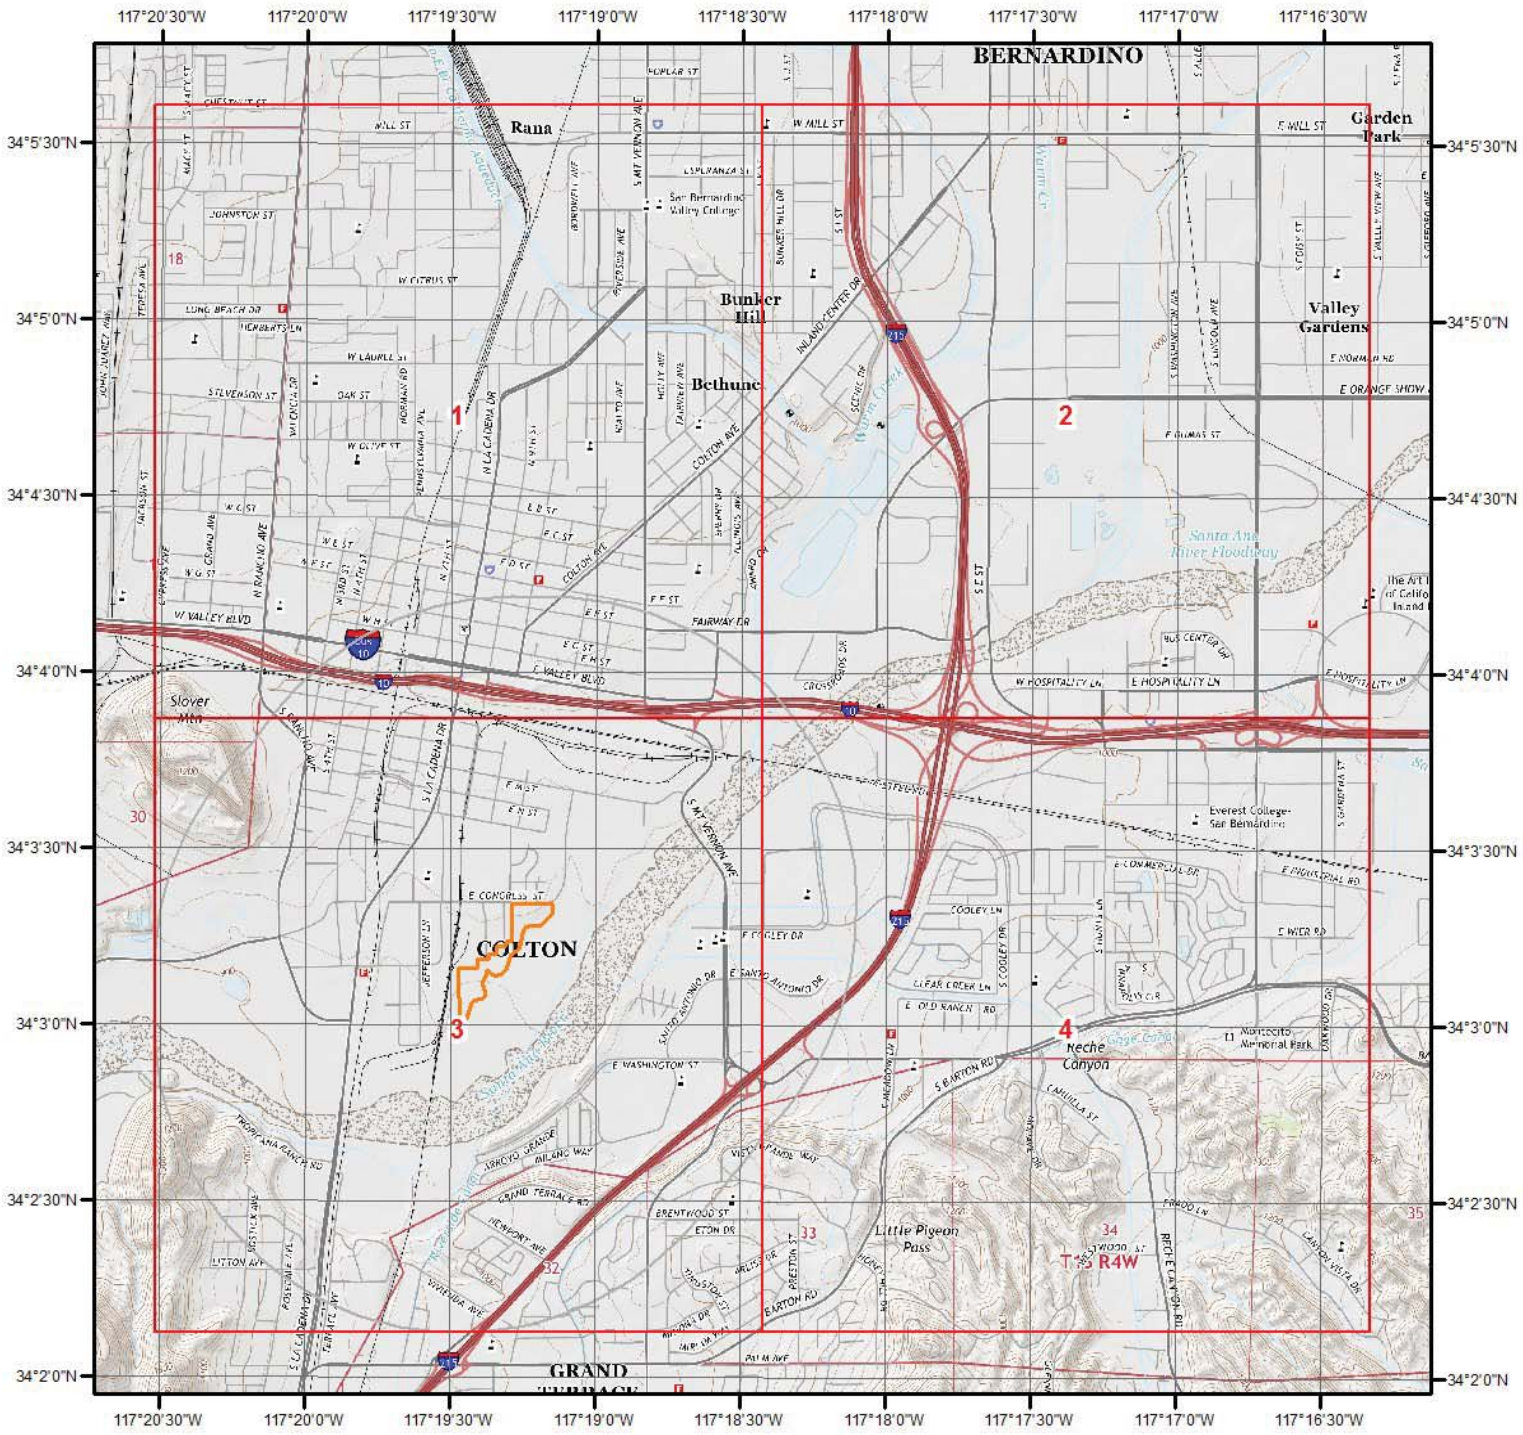
Appendix....1260
Liability Notice....1262



The ERIS ***Physical Setting Report - PSR*** provides comprehensive information about the physical setting around a site and includes a complete overview of topography and surface topology, in addition to hydrologic, geologic and soil characteristics. The location and detailed attributes of oil and gas wells, water wells, public water systems and radon are also included for review.

The compilation of both physical characteristics of a site and additional attribute data is useful in assessing the impact of migration of contaminants and subsequent impact on soils and groundwater.

Disclaimer

This Report does not provide a full environmental evaluation for the site or adjacent properties. Please see the terms and disclaimer at the end of the Report for greater detail.

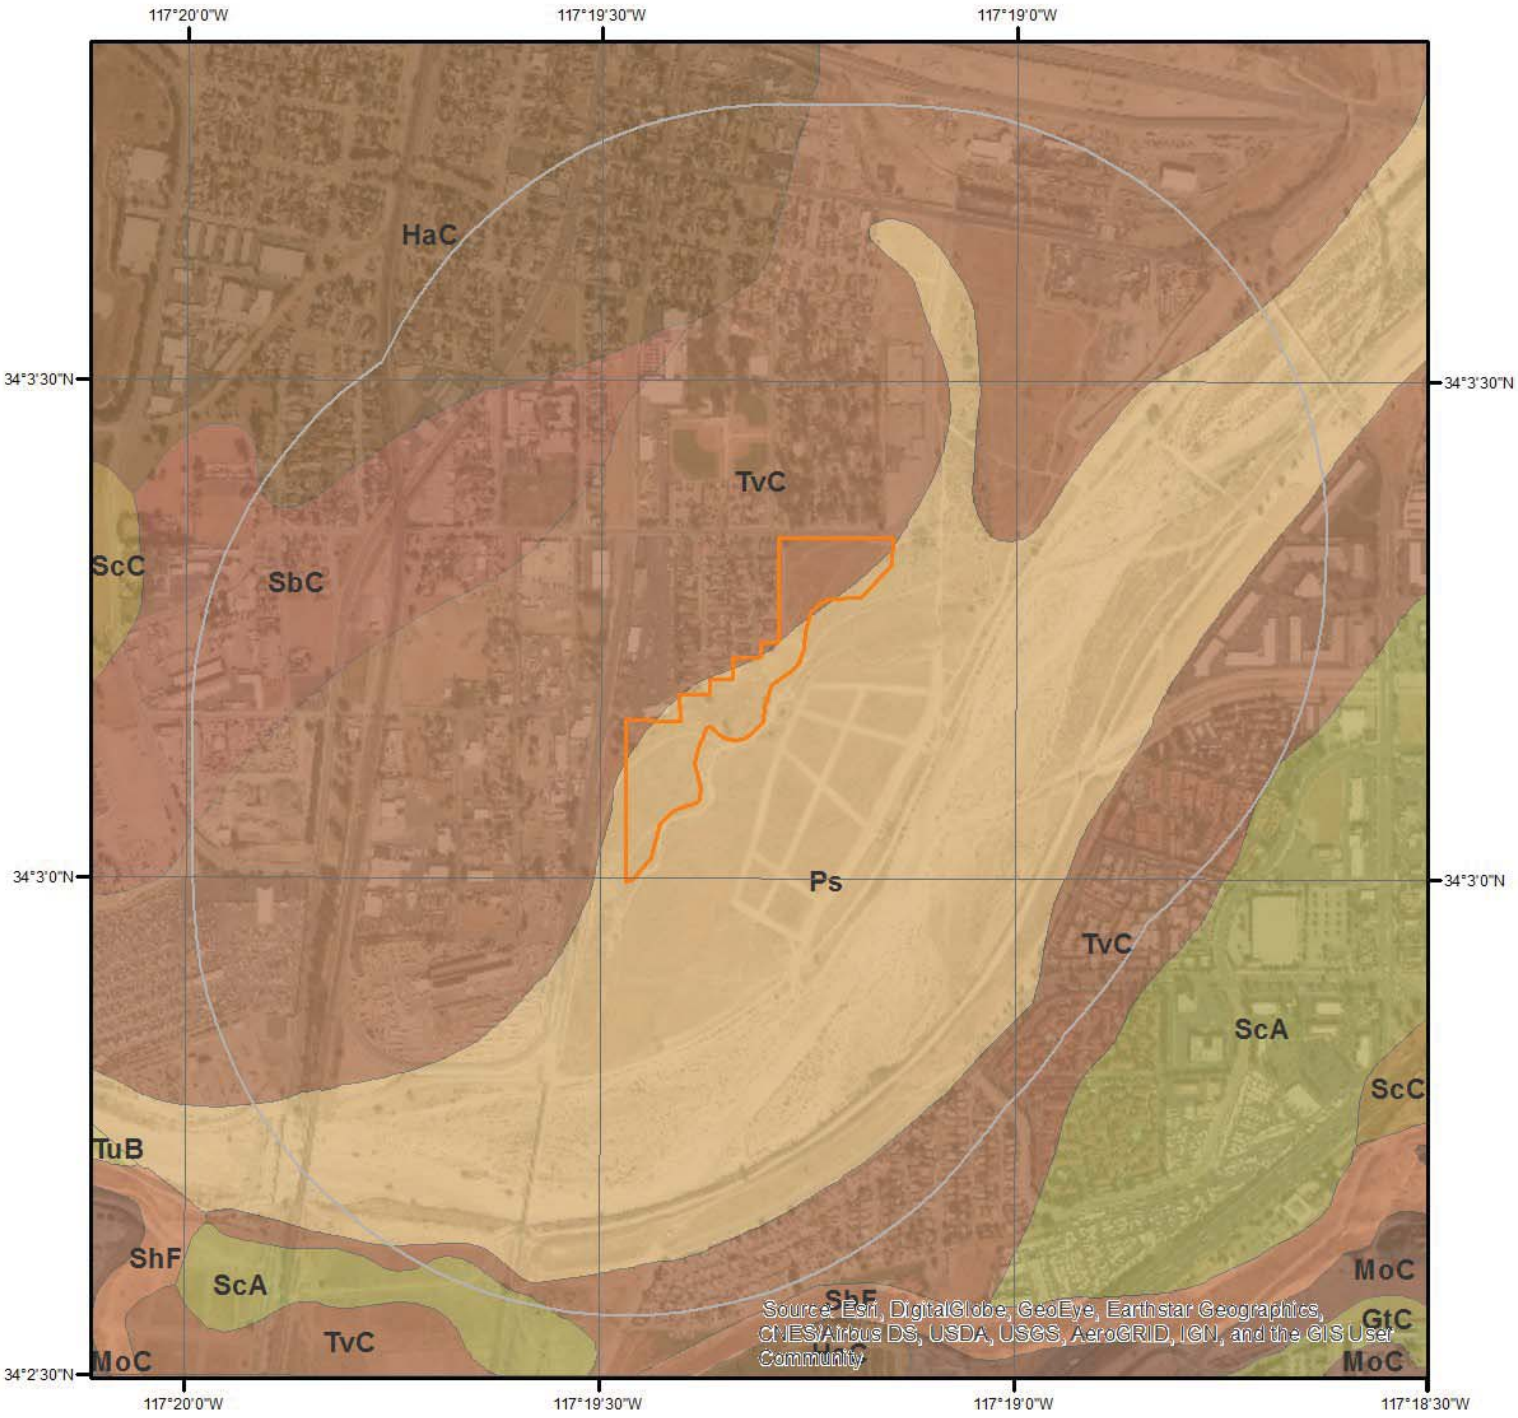
Geologic Units

This maps shows geologic units in the area. Please refer to the report for detailed descriptions.

ERIS
ENVIRONMENTAL RISK INFORMATION SERVICES



Geologic Information

The previous page shows USGS geology information. Detailed information about each unit is provided below.

Geologic Unit Q

Unit Name:	Quaternary alluvium and marine deposits
Unit Age:	Pliocene to Holocene
Primary Rock Type:	alluvium
Secondary Rock Type:	terrace
Unit Description:	Alluvium, lake, playa, and terrace deposits; unconsolidated and semi-consolidated. Mostly nonmarine, but includes marine deposits near the coast.

Soil Information

SSURGO Soils

0 0.2 0.4 Miles

Soil Information

The previous page shows a soil map using SSURGO data from USDA Natural Resources Conservation Service. Detailed information about each unit is provided below.

Map Unit HaC

Map Unit Name:	Hanford coarse sandy loam, 2 to 9 percent slopes
Bedrock Depth - Min:	
Watertable Depth - Annual Min:	
Drainage Class - Dominant:	Well drained
Hydrologic Group - Dominant:	A - Soils in this group have low runoff potential when thoroughly wet. Water is transmitted freely through the soil.
Major components are printed below	
Hanford(85%)	
horizon H1(0cm to 30cm)	Sandy loam
horizon H2(30cm to 152cm)	Coarse sandy loam
horizon H2(30cm to 152cm)	Fine sandy loam
horizon H2(30cm to 152cm)	Sandy loam

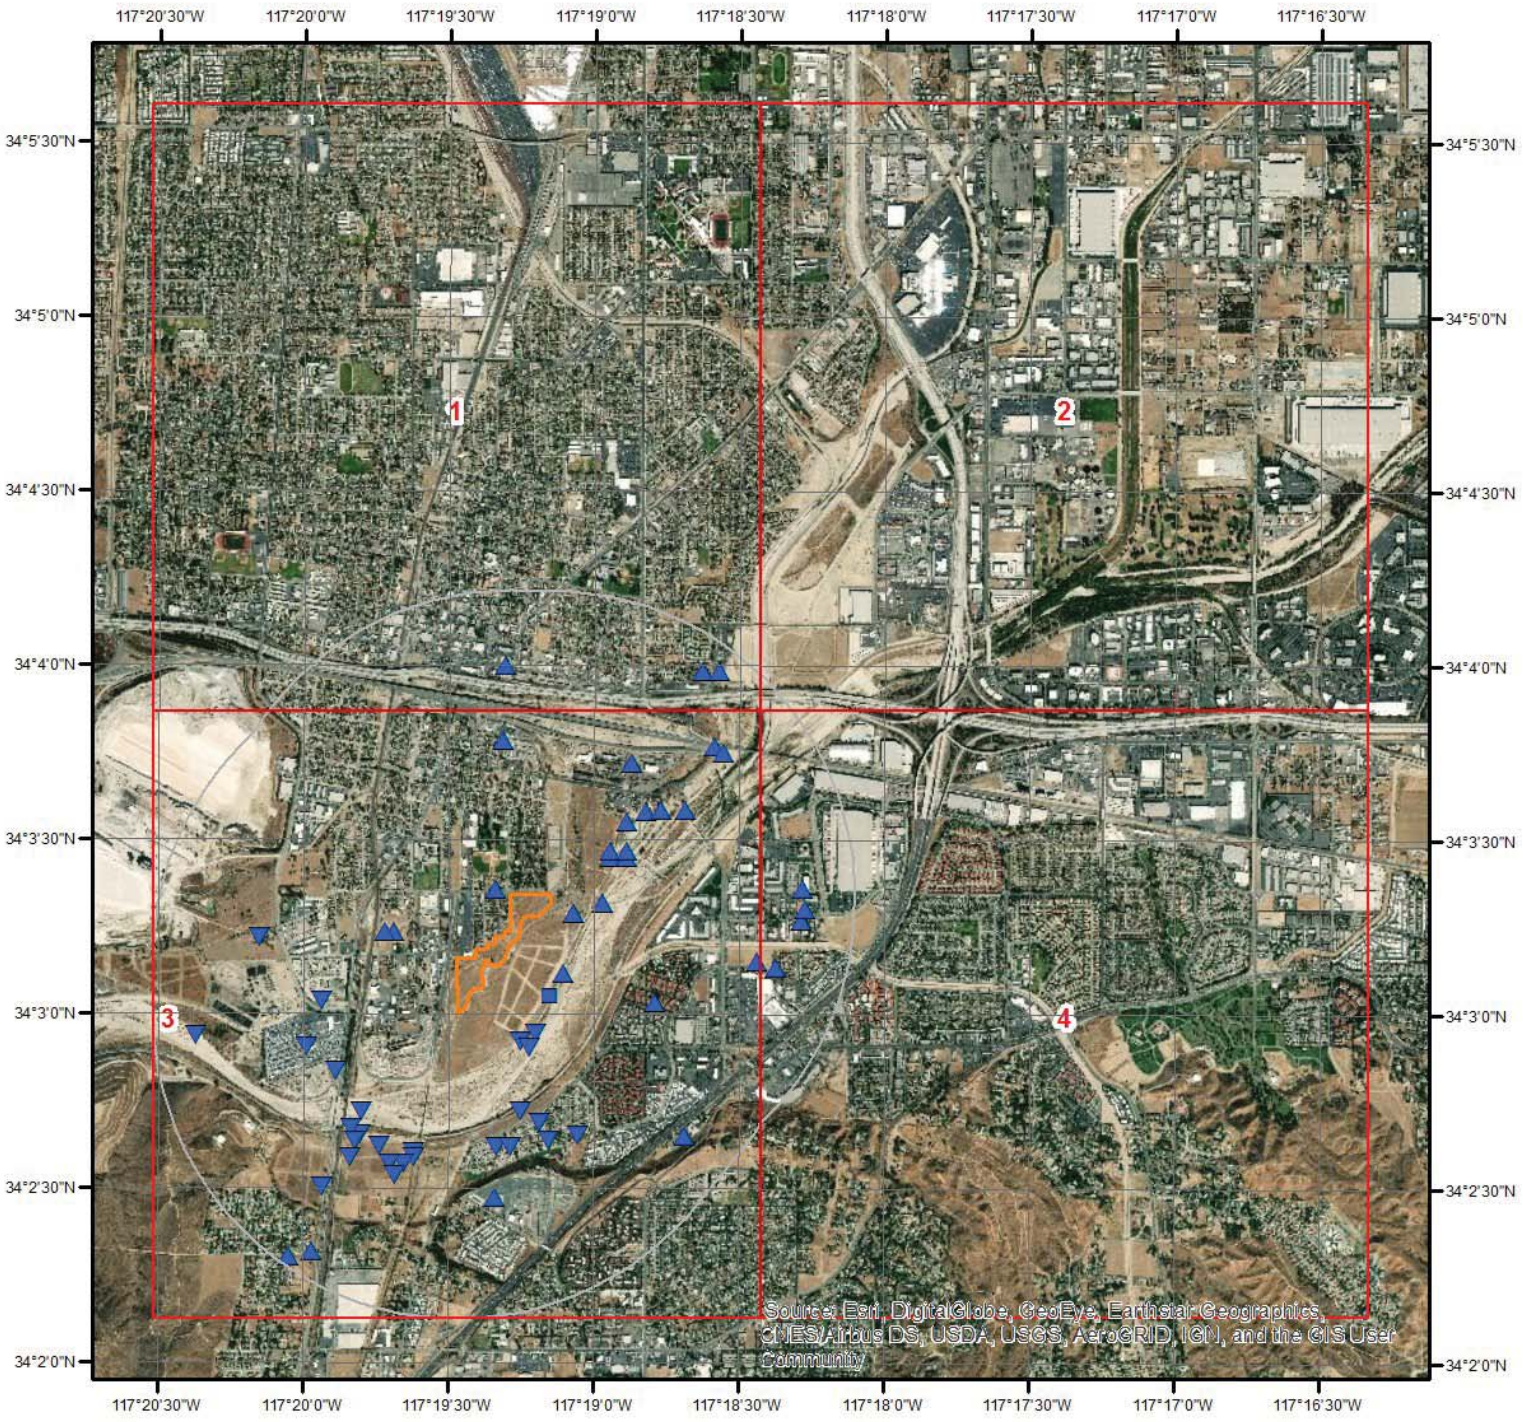
Map Unit Ps

Map Unit Name:	Psamments, Fluvents and Frequently flooded soils
Bedrock Depth - Min:	
Watertable Depth - Annual Min:	
Drainage Class - Dominant:	Somewhat excessively drained
Hydrologic Group - Dominant:	A - Soils in this group have low runoff potential when thoroughly wet. Water is transmitted freely through the soil.
Major components are printed below	
Fluvents(50%)	
horizon A(0cm to 25cm)	Gravelly sand
horizon C1(25cm to 76cm)	Stratified gravelly sand to gravelly loam
horizon C2(76cm to 152cm)	Stratified gravelly sand to gravelly loam
Psamments(50%)	
horizon A(0cm to 30cm)	Sand
horizon C1(30cm to 122cm)	Fine sand
horizon C1(30cm to 122cm)	Loamy sand
horizon C1(30cm to 122cm)	Sand
horizon C2(122cm to 152cm)	Stratified gravelly sand to gravelly loamy sand

Map Unit SbC

Map Unit Name:	San Emigdio gravelly sandy loam, 2 to 9 percent slopes
Bedrock Depth - Min:	
Watertable Depth - Annual Min:	
Drainage Class - Dominant:	Well drained
Hydrologic Group - Dominant:	A - Soils in this group have low runoff potential when thoroughly wet. Water is transmitted freely through the soil.
Major components are printed below	

San Emigdio(85%)	
horizon H1(0cm to 41cm)	Gravelly sandy loam
horizon H2(41cm to 152cm)	Stratified sandy loam to loam



Map Unit ScA

Map Unit Name:	San Emigdio fine sandy loam, 0 to 2 percent slopes
Bedrock Depth - Min:	
Watertable Depth - Annual Min:	
Drainage Class - Dominant:	Well drained
Hydrologic Group - Dominant:	A - Soils in this group have low runoff potential when thoroughly wet. Water is transmitted freely through the soil.
Major components are printed below	
San Emigdio(85%)	
horizon H1(0cm to 20cm)	Fine sandy loam
horizon H2(20cm to 152cm)	Fine sandy loam
horizon H2(20cm to 152cm)	Loam
horizon H2(20cm to 152cm)	Sandy loam

Map Unit TvC

Map Unit Name:	Tujunga gravelly loamy sand, 0 to 9 percent slopes
Bedrock Depth - Min:	
Watertable Depth - Annual Min:	
Drainage Class - Dominant:	Somewhat excessively drained
Hydrologic Group - Dominant:	A - Soils in this group have low runoff potential when thoroughly wet. Water is transmitted freely through the soil.
Major components are printed below	
Tujunga(85%)	
horizon H1(0cm to 91cm)	Gravelly loamy sand
horizon H2(91cm to 152cm)	Gravelly loamy sand
horizon H2(91cm to 152cm)	Gravelly sand
